Nepal lifts political ban following anti-royalist riots

By K.K. Sharma in New Delhi and Our Foreign Staff

THE KING of Nepal last night bowed to a wave of protest by agreeing to lift a 30-year han on political parties in the Himalayan country.

Pro-democracy leaders whose campaign climaxed with a violent assault on the royal palace on Friday immediately responded by calling for an end todemonstrations.

King Birendra's announce-

ment came as much of the country was under curfew, with soldiers armed with rifles and machine guns posted on guard throughout the capital, Kathmandu.

Tourists were evacuated from Kathmandu after Friday's violence; in which scores of demonstrators were killed. A royal communique said that the king had met four

tists and two from the banned Nepali Congress party, which spearheaded the movement for restoration of democracy in

The communiqué made no mention of a new election to Nepal's non-party legislature, but pro-democracy campaigners appeared satisfied that their reform demands were With the opposition leaders calling off their campaign, one of them said: "There is no need

for the agitation."

For the past 30 years Nepal has been ruled by a monarch in consultation with the non-party legislature. But King Birendra, whose father stifled a

previous experiment with democracy, said he would

from Nepal's constitution The campaign for political reform has been gathering strong momentum in Nepal

since February.

At first backed mainly by students, the movement broaded to include strikes by doctors, airline pilots and some government employees. The march on the royal pal-

between soldiers and thousands of protesters, showed how the king's own position was becoming vulnerable.

A commission headed by the chief justice of the supreme court, Mr Prachanda Raj Anil, has been set up to hold an inquiry into Friday's violence. Continued on Page 18 Forces of reform, Page 6

Group of Seven voices concern at weakness of Japanese currency

THE Group of Seven leading industrialised countries issued a statement of concern about the weakness of the yen at the weekend but fell far short of a commitment to stabilise the Japanese currency.

The foreign exchange mar-kets are likely today to test the determination of central banks from the G7 - The US, the UK, West Germany, Japan, Canada, Italy and France - to defend

the yen.

After an eight hour meeting on Saturday, it became apparent that Japanese efforts to secure large scale joint support for the yen from the other G7 countries failed largely because of West German oppo-A joint statement said the G7

finance ministers and central bank governors had discussed especially the decline of the yen against other currencies, and its undesirable consequences for the global adjust-ment process." But the state-ment stopped short of specific support for the yen although it left, open the possibility of kets.

It said the US, Japan, West Germany, France, Britain, Italy and Canada agreed to keep developments in financial markets, including the yen's fall, under review." In a vague echo of past G7 communiqués that focused on the need for currency stability, it added:

"They reaffirmed their commitment to economic policy co-or-dination, including co-opera-tion in exchange markets

The dollar softened steadily against the Japanese yen throughout last week as traders took profits in advance of the G7 meeting. On Friday, traders said the foreign exchange market would test G7 central banks today by buying the dollar aggressively if no substantial commitment to defending the yen was produced in Paris.
Mr Jim O'Neill, chief econo-

mist for the Swiss Bank Corporation in London, said on Fri-day that the dollar may initially fall to Y156 but then the market will try to buy dollars. "That's where the fun will start," he said.

After the meeting, none of the ministers was prepared to explain what precisely the pas-sages concerning the yen meant. However, Mr Guido Carli, the Italian treasury min-ister, let slip that he thought Japan's problems were essen-Many of Japans's trading

partners believe the yen's weakness reflects Japan's reluctance to raise interest rates and policy disputes between the Bank of Japan and the Ministry of Finance. Mr Carli reflected these views when he said that: "intervention on exchange markets is not a substitute for action on

economic fundamentals. It is understood Japan sought joint action to support the yen that would have included yen purchases for Deutschemarks by the Bundes-

Mr Pierre Beregovoy, the French finance minister who hosted the meeting, produced a draft communique that would have paved the way for such action. However, this was rejected by Mr Karl Otto Pöhl, the West German Bundesbank president, who steered the meeting towards adopting the

While falling against most big currencies, the yen has devalued by a steep 30 per cent against the D-mark. German government officials said they believe that a strong D-mark is essential to achieve monetary union with East Germany without raising interest rates or taxes. They fear that selling D-marks to support the yen would weaken the mark.

Mr Ryutaro Hashimoto, the Japanese Finance Minister, declared that he was happy that the yen had been singled out. "There is no single G7 member who said the current level of the yen should be kept as it is," he said. The seven had agreed that the yen's exchange rate "did not reflect economic fundamentals." Waigel confident, Page 3; Economics Notebook, Page 19

Greek poll unlikely to produce clear winner

By Kerin Hope in Athens

EARLY returns in yesterday's Greek general election gave the conservative New Democracy party a strong lead but indicated that it was unlikely to secure a clear majority in

With 10 percent of the vote counted, the conservatives, under Mr Constantine Mitsotakis, had 48.8 per cent of the vote. The Panhellenic Socialist Movement (Pasok) of Mr Andreas Papandreou, the for-mer Prime Minister, followed with 37.8 per cent, while the Communist-led Left Alliance party trailed with 8.6 per cent. Analysts said that unless the trend altered sharply the onservatives would narrowly fail to win power for the third

time in less than a year.
It was not clear whether the Socialists and Communists would hold an overall majority between them, although sup-port for the Left Alliance was declining by a smaller margin than expected. The conservatives finished

ahead in both the June and November elections but fell short of capturing an outright majority in the 300-member In November, they won 148 seats, to 128 for Pasok and 21 for the Left Alliance. The two

remaining seats went to a Green and an independent rep-resenting the Moslem minority in northern Greece. The conservatives appeared to have lost at least four out of the five crucial single-seat con-

Genentech wins **US** court victory over Wellcome

By Louise Kehoe in San Francisco

GENENTECH, the US biotechnology leader, has won a significant US court victory in its long-running patents bat-tle with Wellcome, the UK pharmaceutical concern, over blood-clot dissolving drugs for

heart attack victims.

The US company, in which
Hoffmann-La Roche of Switzerland plans to acquire a majority interest, said a jury in the US District Court of Delaware had found that Wellcome and Genetics Institute, another US biotechnology concern, infringed three Genentech patents for its bio-engineered version of tissue plasminogen activator (TPA). The court did not award monetary damages to Genentech, however. Genentech none the less

declared a "total and complete victory" against its potential rivals in the market for heart attack drugs.
TPA is the first major com

mercially successful biotech-nology product. Last year Genentech sold nearly \$200m of the drug, under the trade name Activase, accounting for two thirds of its revenues. Genetics Institute, based in

Cambridge, Massachusetts, developed a rival version of TPA and licensed it to Wellcome, whose Burroughs-Wellcome unit hopes to market it in the US. Burroughs-Wellcome is currently testing its version of the drug in US clinical trials and recently filed for US Food and Drug Administration approval to market it. Genentics Institute is also developing a "second generation" version of TPA for the US market. Genentech said that it will now ask the court for an injunction to block Wellcome

and to prevent Genetics Insti-tute from selling its second generation product. Genentech said the US court also denied Wellcome's antitrust claims against Genentech as well as Genetics Institute's

from marketing TPA in the US

claim of unfair competition. Mr G. Kirk Raab, president and chief executive officer of Genentech, said: "This verdict is a major victory for Genentech, but an even greater one for the biotechnology industry because it signals that such patents will provide meaningful protection for biotechnol ogy innovations and the impor-

tant research discoveries." Wellcome could not be reached for comment yester day, but can appeal against the US court decision.

The US ruling affects Genen tech's US patent rights only. In parallel, protracted litigation in the UK, Genenuch's broad patent covering TPA was invalidated. Genentech has decided not to appeal against that rul-

Moscow legislators prepare draft law to end conscription

By John Lloyd in Moscow

SOVIET LEGISLATORS have prepared a draft law which would end conscription to the Soviet Army, a reform bitterly opposed by the Ministry of Defence and senior officers. The draft law has been

drawn up by the armed forces sub-committee of the Congress of People's Deputies' committee on defence and state secu-rity. It has emerged in the teeth of opposition from senior

officers to the concept of a pro-fessional or, as they call it, "mercenary" army.

The Defence Ministry has reportedly "made threats" against the few officers who took part in the discussions on the draft law and who are also elected members of the Congress. Significantly, top mili-tary academies have refused to

rary academies have refused to discuss the law.

According to a brief report yesterday in the daily Komso-molskaya Pravda, the sub-committee proposed: that the armed forces turn professional; that the Ministry of Defence be controlled by a "higher state

organisation"; and that it be "fully subordinated to the leaders of the military institutions of the Supreme Soviet, under direct parliamentary control.

The report said that Mr V Lopatin, the sub-committee chairman "spoke in favour of chairman "spoke in layour of establishing national military units in the republics" – a move which is particularly opposed by the military and political leaderships, since it is precisely that which the Baltic

states are now demanding.
In addition, the draft law says the Minister of Defence. presently General Dimitri Yazov, should be a civilian; that an alternative to military service be introduced; and that the numbers of senior officers of the political directorate who enforce ideological control be cut back in favour of more non-commissioned officers and civilian workers. Military personnel should, the draft proposes, be allowed to join trade unions and particular proposes, personnel should, the draft proposes, be allowed to join trade unions and particular particular particular proposes.

ipate in political parties.

armed forces, exposed recently as often brutalising for young recruits, should enjoy the ser-vices of psychiatrists, social workers and lawyers. Military in favour of courts. Colonel A Tsalko, an army officer and Peoples' Deputy who is opposed to the committee's proposals, was quoted as say-ing "in order to have a race you must have two horses. Let the Defence Ministry draw up its own draft to present to the deputies, and see which they vote for."

The draft coincides with falling Soviet military strength which is now below 5m due to cuts announced last year. But cent of the population, more than any other country except for Greece. By contrast, France has 1.0 per cent of its popula-tion in uniform and the USA West Germany 0.79 and the UK 0.58 per cent.

Georgians peer into Lithua-nian mists; First foreign trade The draft also says, the deficit in 14 years, Page 4

Companies are increasingly looking for sophisticated ways to finance growth.

They are increasingly finding RoyScot.

Over the decade from 1978 to 1988 the proportion of industrial and commercial assets acquired by instalment credit has risen steadily from under 10 per cent. to approaching

In monetary terms, it means the market is now worth around £14.5 billion, compared to around £1.5 billion in 1978. The days of businesses automatically opting for a loan or

an overdraft are going, not growing. Today, more than one third of all company cars are acquired by leasing or contract hire. Comparatively little

known ten years ago, contract hire alone now accounts for nearly 20 per cent, of them. The rapid expansion of the factoring and invoice discounting market, to a value of around £10 billion at the end of 1989, is a further illustration of the increasing sophistication with

which companies finance their growth. One company is in the forefront of all these increasingly important trends. That company is RoyScot.

Iliescu cautious on opening up economy

By Owen Bennet-Jones in Bucharest

ROMANIA'S National Salvation Front, which was catapulted into power following the overthrow of the Ceausescu regime, yesterday launched its election campaign in earnest by choosing Mr Ion

Iliescu as the party's candidate for the presidency.
In his address to a lacklustre party meeting, Mr Iliescu said that the Front needed to become a modern party with a technocratic image. However, the meeting failed to produce any hard economic policies except in agriculture.

In a statement aimed at wooing over the peasant con-stituency, Mr Iliescu said that laws would be drafted to allow peasants to obtain land, on which they will be free to grow

their own crops.

However, they would not be able to sell the land, a policy which is apparently aimed at preventing any individual landowners becoming predominant in Romania's rural com-

Niescu: candidate

Contrary to the electoral programmes of the main opposi-tion parties, Mr Iliescu ruled out the abolition of collective farms, which he said would remain the mainstay of agricultural production.

In a speech which reflected general caution over opening up the economy, he said the Front was committed to the introduction of markets but in a way that would protect the weakest categories in society.

IRAN-CONTRA SCANDAL CLAIMS ITS MOST SENIOR WHITE HOUSE VICTIM

Poindexter finds out where the buck stops

By Lionel Barber in Washington

THE CONVICTION of Mr John Poindexter on all five felony charges in the Iran-Contra trial vindicates a central argument in the three-year-long criminal investigation into the scandal: that a conspiracy to cover-up existed at the highest levels of the Reagan administration.

Mr Poindexter, 53, a colourless rear-admiral who gradu-ated first in his class at the Naval Academy, rose to serve briefly as President Reagan's National Security Adviser in

He is the most senior White House official to be convicted of criminal charges since the Watergate scandal.

were undone by the cover-up of foolish or dubious acts -rather than the acts themselves. Mr Poindexter, who intends to appeal, was convicted of conspiracy, lying to Congress and obstructing congressional inquiries. He faces a maximum sentence of 25 years in prison and fines of

\$1.25m. Mr Poindexter's defence was two-fold: he never intention-ally misled Congress and he acted throughout under the authority of President Reagan. It failed because Mr Reagan, in eight hours of video-taped testimony, gave a performance of bumbling forgetfulness

Then as now, the defendants which did little for his own reputation and still less for his former top adviser. Mr Poindexter did not take

the stand in his own defence. By contrast, Mr Oliver North, his co-White House conspirator. convinced a jury earlier this year that he was a fall-guy for the President in the Iran-Contra scandal - the sale arms to Iran in exchange for American hostages and diversion of profits to US-backed rebels in Nicaragua. In the Poindexter trial, Mr North, though a reluctant wit-

ness, ended up supplying the

most damaging evidence against his former boss. He

tore up a key document that depicted missile shipments to Iran as an arms-for-hostages deal. This act amounted to "specific intent" to deceive Congress, the prosecution said. It was once said of Mr Poin-dexter that he would not cross

ing an order to do so. But he told a congressional investigation in 1987 that he felt very strongly it was the duty of staff to protect the President, the commander-inchief.

the road without first receiv-

The conviction of Mr Poindexter is perhaps an argument against putting military men in sensitive, politically exposed positions, particularly

those that require a relationship of trust with Congress. Yet in one sense Mr Poindexter was correct. The Iran-Contra scandal put

Mr Reagan's presidency at risk. Mr Reagan had sold mis-siles to Iran, he had traded arms for hostages. Mr Poin-dexter was not the only senior official to make evasive statements in the frantic November days after the scandal broke.

Others such as Mr Ed Meese, Attorney General, and Mr William Casey, CIA director, also stretched the truth. The difference, as Mr Poindexter has now discovered, is that the buck stopped on his desk rather than the President's.

He appeared to close the

door on a possible grand coali-tion with the Free Democrats, for which many Hungarians

"What we shall be aiming for

community has called.

the Smallholders."

of the country.

Solidarity plans ventures into world of finance

SPURRED by conviction as well as need, Poland's Solidar-ity trade union is organising a number of financial institu-tions which could play a lead-

ing role in the country.

Tucked away in a few rooms on the fourth floor of the union's cavernous national headquarters in Gdansk, a group of people, mainly in their thirties are working or their thirties, are working on setting up a bank as well as an

insurance company.

The idea is that both institutions would enter into a joint venture with a western partner to acquire additional finance, experience and access to west-

ern markets.

The Solidarity bank is the main project of the union's Economic Fund, whose job is to supplement the movement's faltering income from member-ship dues. Membership is now about 2m compared with 10m in 1981, and not all of the present members are keeping up payment.
"Solidarity is more than a

and much of the international mere trade union," says Mr Andrzej Spiker, a fund official. "It should help resolve the country's problems, not just through paying out benefits but by investing and transis to include in the coalition terday blamed a smear cam-paign for their poor showing. Mr Gaspar Miklos Tamas said that the last fortnight between

forming the economy.
"We realise that reforming the present economic structures is a lengthy process so we want to establish alterna-tives and provide competition." The fund is headed by Mr Jerzy Kobylinski, a 29-year-old.

with a background in the small private businesses which have flowered in Gdansk in the past few years.

As its first venture, the fund.

in conjunction with the National Bank (NBP) and a US company, plans to sell commemorative coins depicting a

Solidarity motif.
Solidarity inspired talks are underway involving two French companies, Suie Batig-noiles and Accor, and the local Gdansk authorities, to take up a \$70m French government credit and expand Gdansk air-port to an annual capacity of between 600,000 and Im passengers and to build a 300-bed hotel in the city.

The fund is hoping that profits from the city.

its from the trade union's fledgling business activities

Bobinski Chris reports on union plans to attract investment into an ailing economy

could provide part of the initial capital for the bank. It also hopes to mobilise the population's hard currency savings.

The planned joint venture with a western bank should, in the fund's view, leave 50 per cent of the shares in Solidari-

ty's hands. The same would be true of the insurance company, which the Economic Fund says, has attracted more interest in the west than the bank. Apart from the fund, Solidarity also has an Economic Foundation, and the two are overseen by Mr Jacek Merkel, who at 36 is a veteran leader of the movement. His experience dates back to the workers' strikes of 1980 but his free mar-

ket beliefs place him at one remove from Solidarity's blue-collar origins.

Mr Merkel fields most of the business offers from abroad which flow into the office of Mr Lech Waless, the leader of Soli-darity, attracted by the latter's appeals for "owners for 80 per cent of Polish industry" and by the movement's powerful role in the country.

US policymakers cool on relations with Moscow

By Peter Riddell, US Editor, in Washington

A DISTINCT check to the steady improvement in US-Soviet relations over the past year has occurred following last week's talks between Mr Eduard Shevardnadze, the Soviet Foreign Minister, and senior members of the Bush

administration. The Lithuanian crisis and what the US sees as Soviet backtracking on key elements of a strategic arms reduction agreement have forced policy-makers to pause and reappraise relations, while stirring doubts in Washington about the intentions and position of President Mikhail Gorbachev. Senior US officials have begun to talk of the dangers of re-emergence of drift and

division and they emphasise the need for progress in the talks between Mr Shevardnadze and Mr James Baker, the US Secretary of State, in Moscow on March 16-19 before the full Bush/Gorbachev summit in the US starting on May

The most immediate problem is Lithuania. After President Bush renewed his public warning against the use of force, a senior administration official was quoted over the weekend as saying "we can't sustain the kind of forward-looking, problem-solving attitude toward the Soviet Union or our support for perestroika or for Gorbachev if they crack down in Lithuania." testified that Mr Poindexter

There is already growing criticism in Washington of the administration's failure to react more strongly to the pressure applied by Moscow on Lithuania in the past two

Concern in Washington has been reinforced by the threat to an early agreement, even in principle, on a strategic arms treaty. The US says there has been a reversal in the Soviet position on sea-launched cruise missiles since early February when the two foreign ministers

met in Moscow.
Then, the Soviets seemed accept the US suggestion for in effect sidestepping the problem of imposing strict numerical limits and requiring complicated verification. But last week the whole issue was reopened. US officials say the Soviet side appeared distracted and uncertain and in part blame domestic pressure from conservatives and the Soviet

military.
One US participant in the talks with Mr Shevardnadze said: "We were struck by the contrast between his ability to say what he wants to have happen and his inability to explain how they were going to proceed to make it happen. I think it left everyone with a much better understanding of how difficult it is going to be for Gorbachev to ride out these

High turnout in Slovenia poll By Laura Silber in Ljubljana

YUGOSLAVIA'S northern republic of Slovenia yesterday voted for a parliament and a president in the first free elections for over 40 years.

Despite persistent rain, elec-tion officials expected an 80 per cent turnout in the first round. The 1.5m electorate seems set on ousting the ruling Party of Democratic Renewal, (LCS-PDR), the former communist party, and forging ahead with demands for an independent

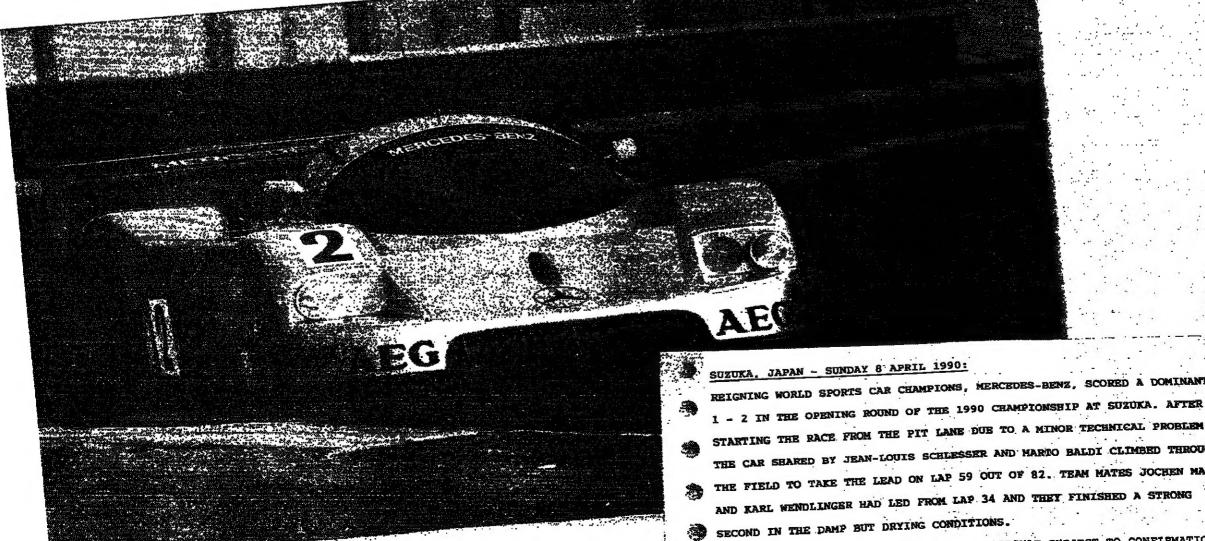

The LCS-PDR is advocating political and economic autonomy for Yugoslavia's richest and most liberal minded republic. The party's presidential candidate, Mr Milan Kucan, who is likely to win against his three opponents, said: "We would accept secession as the final option, but only when it becomes obvious that neither a Yugoslav federation nor con-

federation is possible." Yet, Demos, the opposition coalition of seven parties, which was leading overall in the final opinion polls, says it wants to leave the Yugoslav federation and create an independent state. First round results are expected today.

Demos's presidential candidate, Mr Joze Pucnik, said that Slovenia will seek indepen-

dence in a year's time. Support for independence appears to be growing and some observers believe that Demos could be heading for a big victory. However, during a brief visit to Ljubljana yesterday, the Yugoslav President, Mr Janez Drnovsek, who comes from Slovenia, said he believed talk of an independent Slovenia was exaggerated.

E Europe market 'could exceed North America'

By Andrew Marshall, Economics Staff

THE European Community the tightening up of governcould be exporting more to Eastern Europe in 15 years than to North America, according to a report released today.
"Europe in 1994" gives the economic outlook for the EC

economies by sector and country. It was carried out by BIPE in France, IFO in Germany, Prometeia in Italy and Cambridge Econometrics in the UK. The survey points to a levelling off in Europe's growth rate in 1990, as inflationary concern grows, interest rates rise and investment slows. But there seems little risk of recession in Europe, the report says, because of "the positive effects of the Single European market, the progress made in improving companies' profitability,

ment spending and the fight against inflation." In the longer term it forecasts renewed growth at a higher rate than in the 1980s. The European Community grew at an average annual rate of 2.4 per cent in the period 1982-88, the report says, which will increase to 2.7 per cent in 1988-94. This will be led by strong growth in exports out-side the EC, which are projected to grow at an average annual rate of 5.0 per cent in 1988-94, up from 4.3 per cent. ●G-7 MEETING IN PARIS

Waigel is confident on unity

By David Goodhart in Bonn and Peter Norman, Economics Correspondent

MR Theo Waigel, West German Finance Minister, yesterday ruled out a tax rise to pay for unification not only in the current legislative term - which ends in December - but also in the next four-year term.

In his most emphatic statement so far on tax implications of unity, he said on West Ger-man TV that there might have to be some adjustment of taxes but that the overall burden would remain the same. Mr Waigel's remarks fol-

lowed a confident assurance to his fellow finance ministers at the G7 meeting in Paris that German unity would be a con-tribution to world growth and to reducing current account imbalances. He said the costs of unity could be carried through higher than expected economic growth and thus tax

Chancellor Helmut Kohl in an interview published at the weekend also ruled out tax rises and said that money could be diverted to East Germany from the defence and

Waigel: New market for all.

Bast German demand for investment goods, rather than rising domestic consumption, is stimulating higher economic growth in West Germany this year, according to the first 1990 report of the five economic

In line with the finance min-istry, the institutes now predict 4 per cent growth in gross national product this year thanks to rising exports to East Germany. They are also raising their growth estimate for 1991 to 3.5 per cent from 2.5 per cent. Inflation for both years is expected to stay between 3 and 3.5 per cent.

In the debate over the most suitable conversion rate between the East German Mark and the Deutsche Mark the institutes say that a one-to-one conversion for wages is too high but may be acceptable for pensions and

The conversion rate question was not allowed to get in the way of Mr Waigel's upbeat future during meetings in Parls yesterday. According to Mr John Major, the British Chancellor, Mr Waigel made no mention of 1:1 or 2:1 when he gave a report on German union

Mr Waigel told the press later that a unified Germany would provide a bigger market for all European countries and that it would be open to all European investors. A united Germany would contribute to stability in the European Monetary System, he added.

road construction budgets. Text of official communiqué

The following is the full official English text of the communique issued after a one-day meeting of finance ministers of the Group of Seven leading indus-trialised nations in Paris. "THE Finance Ministers and

Central Bank Governors of Canada, France, West Ger-many, Italy, Japan, Britain, and the United States met on April 7, 1990, in Paris for an exchange of views on current global economic issues.

The Managing Director of the IMF participated in the multi-lateral surveyance dis-"The Ministers and Gover-

nors reviewed their economic policies and prospects. They noted that since their last meeting, economic growth had been slowing in several countries to more sustainable lev-

"However, overall growth prospects remain good, with strong investment providing a major stimulus to their economies, inflations remained con-tained and external imbalances have been reduced although

"The Ministers and Governors expressed the need for continued close co-ordination of their macro-economic and structural policies to obtain sustained growth, low inflation and greater stability of

change rates. In this respect, they agree that current inflation rates require continued vigilance. They agreed that countries with fiscal and current account deficits should reduce budget deficits and increase private

They also agreed that countries with external surpluses should, at the same time, continue to contribute to external adjustment by promoting noninflationary growth of domes-tic demand through appropri-ate macro-economic and structural policies. They also agreed that savings should be pro-moted in all countries through the use of appropriate struc-

tural policies. The Ministers and Governors discussed developments in global financial markets, especially the decline of the yen against other currencles, quences for the global adjustment process, and agreed to keep these developments under review. They reaffirmed their commitment to economic policy coordination, including co-operation in exchange mar

"The Ministers and Governors welcomed the reforms in Eastern Europe towards market oriented economies which, they believed, are the most profound in decades.

They expressed their willingness to contribute to the success of the ongoing process though appropriate bilateral and multilateral assistance, through helping countries undergoing reforms to remove obstacles to private capital flows and exchange of information and expertise.

They reviewed and assessed the possible effects of these

"They noted that German economic and monetary union could contribute to improved global growth and to a reduction of external imbalances in

Foreign investment 'changing structure of world economy'

Country

France

he "globalisation" of business has been one of the great themes of the past decade, as more and more companies have rushed to expand across borders by making foreign acquisitions and mergers and investing in greenfield sites, writes Guy de Jonquières.

According to a study by Dr DeAnne Julius, chief econo-mist of Shell, this surge of foreign direct investment (FDI) has implications far beyond corporate boardrooms. She argues that it is contributing to fundamental changes in the structure of the world economy and challenging underlying assumptions of government

"Increases in FDI flows have reached the threshold where they create a qualitatively dif-ferent set of linkages between advanced economies," the study says. "As a means of international economic integration, FDI is in its take-off phase, perhaps in a position comparable to world trade at the end of the 1940s." Between 1983 and 1988, FDI

worldwide rose by more than 20 per cent annually, four times faster than world trade. At the end of that period, the worldwide stock of direct investments by the US, Japan, West Germany, Britain and France (the "G5" countries) was \$757bn.

On recent trends, the study suggests, annual FDI outflow may rise to \$229bn by 1995, double the 1988 level, and the G5's stock to \$1,706bn. The European Community would overtake Japan to become the world's largest foreign direct investor, with outflows in 1995 of \$65bn, or \$90bn if intra-EC investments are included.

Growth of inflows into the US would tail off during the period, but those into Japan would rapidly accelerate, increasing by 40 per cent. Even today, the scale of FDI

is almost certainly understated, since it is derived from national balance of payments statistics, which do not accurately reflect foreign which are

Furthermore, the study says the true economic importance of FDI is reflected not in the value of assets of foreign-owned firms (FOFs), but in their sales. In the US, local sales by FOFs were one-and-ahalf times bigger than the

Real Growth Total In Flows (80-88) 252 West Germany

G5 FOREIGN DIRECT INVESTMENT

country's imports in 1985. FOFs in the US also account for more than half the country's exports and a third of its imports, while a further one fifth of imports are accounted for by shipments made by foreign subsidiaries of Americanowned companies.

FDI growth is increasingly concentrated in the industria-lised world, and flows to developing countries fell in real terms in the 1980s. Three quarters of the world's FDI stock is owned by the G-5 countries, though they account for only 42 per cent of world trade.

r Julius says differentials in countries' growth rates do not explain the pattern of FDI flows. Though the business optimism generated by 1992 is acting as a stimulus in Europe, it is only one element in a wider global trend, she says.

She also believes trade protection has played only a small role in encouraging FDI. On the contrary, she concludes that the most important factor has been international liberalisation, particularly of services - the sector where FDI has grown fastest in recent years.

'A crack has begun to open in the regulatory structures that have protected many service industries behind national borders. This crack is certain to open further, the study says.

Dr Julius argues that these trends are robbing merchandise trade and balance of payments statistics of much of their meaning. A complete pic-ture of international economic integration and countries' competitiveness can only be gained by taking account of sales and purchases by foreign-owned firms, since these effectively substitute for imports and exports. Re-calculating US trade figures to include transactions between American and foreign-owned companies, both in the US and abroad, the study estimates the country's total "foreign sales" at \$1,145bn and its "foreign purchases" at

\$1.088hn in 1986. On that basis, the US enjoyed a surplus on foreign sales of \$57bn, compared with a \$144bn merchandise trade deficit. Overall, the study finds the economic impact of FDI has been positive, and that foreign-owned companies do not have much differently from

domestic ones.
It argues that, as the eco nomic contributions of for-eign-owned firms are recognised, they will offset protectionist pressures from weaker domestic producers.

However, it emphasises that the full benefits of FDI will be realised only if governments treat foreign-owned and domestic firms equally and do not discriminate between trade and investment. It identifies four principal risks which, it says, call for closer international coordination:

■ The use of national security or cultural arguments to thwart foreign acquisitions. ■ Conflicts between national competition policies. "Competition policy has the potential to overtake trade policy as the most contentious area of international economic relations,

the study says.

Arbitrary local content rules and anti-dumping actions, panies to substitute local production for imports.

■ International disputes over reciprocal market acress.

OVERSEAS NEWS

Georgians peer anxiously into Lithuanian mists

Henry Cleary contrasts the moods in Vilnius and Tbilisi as both strive to secede from Soviet Union

HE flashpoint of nationalist activity on the fringes of the Soviet Union will switch today from the mists of the Baltic Sea to the southern state of Georgia.
Up to 1m people - including
sympathizers from the Baltic
states, liberal Russian groups and nationalists from nearby Armenia and Azerbaijan - are expected to gather in Tbilisi. Georgia's capital, for a spectac-

ular 24-hour demonstration. The event, which will include the picketing of the local military headquarters, is to commemorate one of the darkest moments in recent Soviet history: the killing with spades and gas of at least 21 peaceful demonstrators. Ever since the so-called April

9 events unleashed a torrent of rage. Georgia has joined Lithu-ania in the top rank of Soviet republics most likely to secede. Both are ancient bastions of Christendom, with strong traditions of higher learning and of efficient agriculture stockbreeding in Lithuania, market gardening and fruit-

farming in Georgia.

But in many other ways, the atmosphere in Vilnius, the Lithuanian capital, and Tbilisi could not present the visitor with a sharper contrast.

On the morning two weeks ago that Soviet tanks rolled past the Vilnius Parliament, the Baltic city's stolid residents seemed utterly unmoved as they queued in the damp air outside shops that are well-stocked by Soviet standards, but bare to a Westerner.

Everything is tidy, if shabby: the narrow, cobblestoned streets, the steep gabled roofs, and the well-tended lawns surrounding the Lenin statue suggest Holland or Denmark after a long, harsh occupation by a

foreign power.

Tbilisi on a spring morning is by comparison a place of balmy, sensual delight. By some freak of nature, the air that rolls down from the pinecovered hills is perpetually sweet, blowing away the fumes from the thousands of little cars that chug along the ele-gant boulevards in a precocious display of prosperity.

And of course the Lithua-

nians and Georgians are, respectively, many of the things that northerners and southerners are supposed to be: stoical, phlegmatic, practi-cal in the former case, passion-ate, impulsive and full of flair

Vilnius, whose ruined Catholic churches (only now being reopened) baunt the skyline, is unmistakeably a European city manqué; while many national-ists aspire to make Tbilisi the centre of an Orthodox Christian theocracy, closer to Byzantium than any modern state

Do these cultural differences mean, then, that the "hot-blooded" Georgians are fated to fumble their independence drive, while the steady nerves of the Lithuanians will

guarantee success?
As it turns out, things are not so simple. In both republics, the most uncompromising supporters of independence have steadily captured the moral high ground, leaving the traditional political class pant-

ing to catch up.
While the Lithuanian Comwhile the Lithuanian com-munist Party managed to save itself, in voters' eyes, by split-ting with Moscow and backing secession, the Georgian Party has proved unable to keep in step with public opinion – its membership and moral author-ity has alummeted. ity has plummeted.

The current Georgian Parlia-ment has sought to win its nationalist spurs by asserting the supremacy of local law over Soviet law; and by stating that any move by Moscow to restrict the right of secession will immediately trigger full independence for Georgia.

But this does not prevent nationalist leaders like Mr

Zviad Gamsakhurdia, the sharp-tongued but highly respected dissident, from dismissing the legislature as a "gathering of marionettes." Virtually the entire political class in both Lithuania and Georgia agree that the incorpo-

USSR GEORGIA Tollisi

ration of their republics (in 1940 and 1921 respectively) was technically illegal. But perhaps paradoxically, it was Lithuania's Parliament that first

TURKEY

ania's Parliament that first made the almost theatrical gesture of declaring a moral and legal independence that it could not physically defend.

The young, deeply religious leaders of Georgia's National Democratic Party (NDP) are convinced that the Lithuanian move was a mistake: they say the first priority must be to get the first priority must be to get rid of the "occupation forces" (the Red Army) through a mounting campaign of civil

They also object to the Lithuanian declaration as an

freely elected legislature) which they regard as illegiti-mate by definition. A boycott campaign by hardline nationalists forced a postponement of local elections due on March 25; a multi-party poll will now be held in October. But the nationalists say they will boy-cott that too, if participation is restricted to those who recog-nize the Soviet constitution.

"The point is not whether it's a good or bad constitution, the point is that it's a foreign constitution," says NDP presi-dent Georgy Chanturia, inter-viewed in the city centre premises which the party recently seized, bloodlessly, from the

local Communist Party.

Mr Chanturia, Mr Gamsakhurdia and another ex-prisoner, Mr Irakli Tsereteli of the National Independence Party (NIP) have buried personal differences to form an extra parferences to form an extra-parliamentary National Forum which plans to conduct its own elections to a national assembly that will presumably guide Georgia towards statehood.

In contrast with Lithuania, it is clear that there is a moderate class of Georgians which has painstakingly carved out an acceptable modus vivendi within the Soviet system: a class that enjoys the recently granted freedom of speech and travel and not suffered from attempt to work through the recent downturn in food Soviet institutions (albeit a supplies. This class is dis-

mayed that the toughness of the Kremlin's new secession law appears to leave little polit-ical space for moderates.

and the second s

It also harbours deep fears that a hard-won quality of life will be ruined as excessive nationalist zeal will give way to bloody intercommunal fighting, and an Azerbaijan-style

crackdown by the Kremlin.
The republic's 70 per cent ethnic Georgian majority can point, with some reason, to neighbourhoods in Tbilisi where a hotchpotch of minori-ties - Armenians, Azeris, Greeks, Russians – have long lived in harmony. Tbilisi, in short, is one of the

few remaining cosmopolitan Near Eastern cities, of the kind that Alexandria, Istanbul, Salonika and (until the Janu-ary pogroms) Baku used to be: places whose cultural life is deeply informed by subtle and carefully evolved relationships between different races.

But as the experience of all those cities shows, centuries-old relationships can vanish overnight once atavistic fear has been aroused.

Whatever the Lithuanians' historical record, they have remained unflinching in the face of attempts to stir up trouble between them and ethnic Russians: in this respect at least the Georgians may need to study the Lithuanian exam-ple closely.

Trade deficit adds to Soviet economic woes

By John Lloyd in Moscow

THE Soviet Union last year recorded a foreign trade deficit of Roubles 3.3bn (\$5.4bn), its first deficit in 14 years, according to the latest official figures. At the same time, a crash programme to put consumer goods in Soviet shops and quell rising public discontent over shorteges in falliant hadler. shortages is failing badly to

shortages is failing badly to meet its targets.

The trade deficit was expected, but the continuing crisis in production is a serious setback for the Soviet authorities. Figures released by the state statistical agency Goskomstat show total production for the first quarter of this year was down by 1.2 per cent from the same period last year, while March was down 1.6 per cent over the same month in 1989. A commentary on the figures in the Government pewspaper

in the Government newspaper Izvestia blames ethnic trou-bles, public demands to shut ecologically harmful plants and conversion of the arms

and conversion of the arms industry.

Both Transcaucasian republics of Armenia and Azerbaijan, where there has been intense ethnic conflict since late last year, show dramatic output falls in the first quarter. Production in Armenia was down 12 per cent and in Azerbaisan 25 per cent — though haijan 25 per cent — though Azerbaijani production picked up 2 per cent in March as strikes were settled and life became mokre normal.

Heavy industry showed the largest fall - by 3 per cent. The all-important consumer goods sector did show a marked increase — up 6.4, per cent or Roubles 7bn, over the first three months of 1989. But that rate of increase was only half as much as the planned increase called for in the crash programme approved last November, which demanded a Roubles 60bn increase in 1990

Further steps towards a mar-Further steps towards a market economy are expected to be revealed today by Dr Leonid Abalkin, deputy prime minister in charge of the economy. The biggest output rises have been in white goods and electronics, with colour television sets and tape recorders up 11 per cent, washing machines up 14 per cent and electric irons up 11 per cent.

up 14 per cent and electric irons up 11 per cent.

But deliveries of cattle and poultry, and the processed foods based on them, fell by 4 per cent and fish processing and flour showed no change.

The trade figures show 1989 imports standing at Roubles 72 by and exports at Roubles 72.1bn and exports at Roubles 68.8bn. Oil exports were sharply down, by 11.7 per cent, from .144.2m tonnes in 1988 to 127.3m. tonnes in 1989. Coal exports; fell from 39.4m tonnes in 27.5m tonnes and 2 per cent to 37.5m tonnes, or 4.8 per cent.
The deficit is due to the drop
off in world oil prices.

The structure of Soviet trade remains heavily skewed to Comecon countries – around 50 per cent – and even more heavily skewed to raw materi-

Some two thirds of its exports to advanced capitalist countries were raw materials (mainly oil, oil products and timber), with machinery and equipment accounting for only 3.2 per cent.

Nordic seamen seek ban on foreign-flagged vessels

By Karen Fossil in Oslo

SEAMEN'S unions in the Nordic countries are seeking a ban on foreign-flagged ferries operating in their waters after as many as 150 people were killed in a fire aboard the Scandinavian Star, a Bermuda-registered ferry on Saturday.

Norwegian police said yes-terday they were hunting a possible arsonist after the captain and many survivors charged that the ferry blaze was started deliberately.

Just days before Saturday's fire, leaders of the three Nordic seamens' unions met in Swewhere they vowed to pre their respective governments to tighten regulations govern-ing foreign-flagged vessels operating in Nordic waters, which they claim do not meet the strict standards or face the same inspection routines required of nationally flagged

On Saturday Mrs Kaci Kull-man Five, Norway's Minster of Trade and Shipping, warned that Norway's regulations gov-erning foreign-flagged ships operating in its waters were likely to be tightened. She will propose that such foreign

flagged vessels would be forced to undergo inspection from the Norwegian authorites. Survivors of the fire aboard

the Scandinavian Star, which is operated by Da-No Ferries, a subsidiary of Copenhagen-based VR Shipping, complained of its poor condition.

Kevin Brown, Transport Correspondent, adds: Inquirles into the disaster are likely to want to draw on the results of Mr Justice Sheen's investiga-

Mr Justice Sheen's investigation into the sinking of the British ferry Herald of Free Enterprise with the loss of

in March 1987.

The inquiry concluded that the Herald capsized primarily because of negligence on the part of several crew members. However, there are parallels with the Scandinavian Star.

In both cases, maritime union officials had complained before the accident that safety precautions were inadequate. The Sheen inquiry concluded that staffing was not a contributory cause of the Herald accident, but criticised confusion over the responsibilities of crew members.

UK-French talks on combined forces

By David White, Defence Correspondent

THE POSSIBILITY of multinational military forma-tions taking the place of for-eign units now stationed in West Germany will be explored during Anglo-French talks

starting in Paris today Mr Tom King, British Defence Secretary, plans to sound out his counterpart, Mr Jean-Pierre Chevenement, on the idea, which British officials said was "still at the early stages of thinking."
The UK and France between

them have more than 120,000 troops in West Germany, and the French and West German armies are in the process of building up a 5,000 strong joint

British defence planners are anxious to establish what kind of joint initiative the French Government would consider compatible with the country's long-standing independent position within Nato.

UK officials said the princi-

ple of joint forces was "superfi-cially attractive" as a way of making a continued foreign troop presence in Germany more politically acceptable. However, no conclusion had been reached about the possible impact of such an initiative on military effectiveness.

In contrast with the model of the Franco-German brigade, British thinking points to a multinational corps structure, made up of national divisions. However, the UK has not ruled out the idea of a joint airmobile division.

This was first proposed by West Germany in 1988 as a combined operational reserve force made up by the four countries of the Northern Army Group - the UK, West Germany, Belgium and the Netherlands. Nato's military

committee ordered a study of the proposal at the time.
British officials made clear they did not foresee units smaller than a division being organised on joint lines. The Nato force structure in

West Germany is split into eight national corps areas West German, two US, one British, one Belgian and one Dutch - with each country commanding its own forces in peacetime, while France maintains a separate corps under permanent national command. Each corps com-prises up to four divisions. Multinational formations could have varied composition,

including US forces in southern Germany, for instance, but made up solely of European nations eisewhere, British officials suggested. The relative place of US

forces is one of the open ques-tions, with the French wanting increased emphasis on the European component of the

Officials said the discussion was not directly tied to the "two-plus-four" negotiations on German unification. But specific proposals would depend on how many foreign troops it was decided should stay on current West German territory.

The Anglo-French talks will also focus on nuclear weapons, with Britain expected to decide in autumn whether to join France or the US to produce an air-launched missile to replace the RAF's nuclear free-fall bombs.

The French option, based on the ASMP medium-range missile already deployed with the French Air Force, has been revived as a possibility after being virtually discounted by Britain in 1988.

AA WINS THE FLEET NEWS AWARD FOR BEST ROADSIDE RECOVERY SERVICE.

We were quietly confident, but now it's official. However, that doesn't mean we'll let this award

Because we're the world's largest and most resourceful motoring organisation, we have a lot

to live up to. Namely 3,600 fully trained patrols, that's three times as many as our nearest rival.

And last year we were called to attend over four million breakdowns.

Those members with Relay also had 670 purposebuilt Relay vehicles at their disposal.

All these breakdowns were reached in an average of 36 minutes.

That's why the AA is best equipped to handle your fleet business.

An agreed three year plan with AA Fleetwide will cover all your company cars at guaranteed 1989 prices. For more information call 0272 251519 during office hours.

AA Fleetwide, The Automobile Association, Fanum House, FREEPOST 8247, Basing View, Basingstoke, Hampshire RG21 2BR.

WE ARE REBUILDING THIS AIRLINE ON THE FUNDAMENTAL BELIEF THAT YOU, THE BUSINESS TRAVELLER ARE THE KEY TO OUR FUTURE.

When this management took over the stewardship of Pan Am early in 1988, it was with full knowledge that if we didn't succeed with the business traveller, we wouldn't succeed at all.

Fortunately, we had a great deal going for us.

Through years of problems, a significant body of loyal, seasoned travellers continued to recognise the benefit from Pan Am's inherent strengths, even though we too many times sorely tested their loyalties.

And then, as improvements began to show, many business travellers who had once given up in frustration began returning to Pan Am.

And now, a new generation of business travellers are discovering Pan Am. And they are not being disappointed.

By heritage, this is a long distance airline.

We have drawn on that heritage to redefine

Pan Am and again provide the long distance
traveller with his or her 'own' airline.

Following are some considerations you may wish to take into account when booking your next flight.

EVERY TIME ZONE CROSSED WILL EXACT ITS TOLL.

Add to that, seemingly endless hours of sitting in right spaces, and you have one wrung-out business traveller heading off the plane into the fray.

Which is precisely why this airline does not skimp on such a big thing as a few little inches.

In Business Class (our Clipper Class),

the seat width is every bit the equal of those in First Class on most domestic airlines.

And at 21-22 inches wide, surpasses the Business Class seats of such international carriers as British Airways, Swissair and Air France, who provide 18-20 inch seats.

Also critical to long flight comfort is elbow

In Pan Am Clipper Class, you'll never be seated in the middle, because there is no middle.

It's two-by-two seating (six across) exclusively and everybody has an aisle or window seat.

Again, for comparison, British Airways and Lufthansa crowd in as many as seven and eight across, respectively.

We cannot, in this space, do justice to our First Class service.

But Pan Am First Class (historically the

But Pan Am First Class (historically the industry standard bearer) has been so improved and refined that we truly hope you will one day have the good fortune to experience it.

'LIVING SPACE' AND THE LONG DISTANCE TRAVELLER.

No matter how wide and comfortable the seat, it's going to 'shrink' on a long flight if it isn't sucrounded by adequate space.

Which is why Pan Am flies only wide-body aircraft on long distance flights.

Our fleet of Boeing 747s (which Pan Am helped design, and then introduced) is one of the largest in the air.

As part of our ongoing renewal programme, 33 of our 747s have been completely refurbished with new interiors and the latest in electronic equipment.

The remaining two will be completed this spring.

The only aircraft to rival the 747 in popularity is the spacious wide-body Airbus.

We now operate nineteen new, technologically advanced Airbus A310s. The largest fleet across the Atlantic.

Significantly, our fleet is growing younger, rather than older.

NOT ALL BUSINESS TRAVELLERS GET TO SIT UP FRONT.

In fact, most don't. We not only recognise this, we have developed an Economy Class programme that goes far beyond the ordinary.

It starts with an Economy Class section that can actually handle more seats than we're willing to put in.

With enrolment in Pan Am WorldPass, you receive all the time and hassle-saving advantages of privileged check-in and priority baggage handling.

WorldPass also gives you the pleasure of ordering your meals in advance from an extensive and exclusive menu.

Of even greater importance to Pan Am Economy Class passengers who fly with us very frequently is our special way of saying thank you.

And that is WorldPass Platinum, which provides free upgrades to Clipper Class. (And if you're already flying Clipper Class, free upgrades to First Class.)

By being a member of WorldPass, you'll benefit from the richest frequent traveller programme in the world.

THE MOST THOROUGH AIRCRAFT MAINTENANCE IN THE INDUSTRY.

Through thick and thin, through every management change, one area of Pan Am service has remained sacrosanct – the service we perform on our aircraft,

The Pan Am maintenance programme always has and always will continue to set industry standards.

Our standards are so high that we spend more on maintenance per aircraft operating hour than any other US, airline.

They are so high that thirty of the world's airlines bring aircraft to us for maintenance, as does the US. Air Force.

And our flight training standards are equally high.

We are currently training pilots for twelve major airlines, the Royal Canadian Air Force and Air Force One.

IF YOU'RE GOING THERE, WE PROBABLY ARE TOO.

We fly to more European cities than all other US, airlines combined.

We are the only US, airline serving the Soviet Union and the only US, carrier that serves virtually every emerging country in Eastern

Out of Miami we now fly to 68 international destinations and 27 U.S. cities.

The response to the quality of service on our Pan Am Shuttle has been so overwhelming that we carry over 50% of the Boston-New York-Washington market.

Domestically, we now serve 40 U.S. cities with feeder flights connecting to 5 Pan Am international gateways.

Systemwide, Pan Am continues to be the number one U.S. airline to the world – flying to 75 cities in 47 countries on four continents.

ONE GOAL MISSED, TWO GOALS SURPASSED.

Due to setbacks, we didn't come close to achieving our financial goal in 1989, which you probably already know.

However, through the hard work and superlative cooperation of our people, we surpassed our growth and operating goals; and are surpassing them again in 1990.

In passenger traffic, January, 1990 was up 23% over January, 1989, and February was up 26%.

Clipper Class increased by 26% and First

Class was up 40%.

In January and February, we recorded the best on-time performance in the history of the company, placing us among the top three airlines in the industry.

In baggage handling, a very critical measure for most travellers, we have now led the industry in efficiency (fewest mishandlings per thousand customers) for three years in a row. Which is an industry record.

If you've been flying with us, we thank you.

If you haven't been, we look forward to proving ourselves to you.

Again and again.

Brazil's Congress agrees Collor's key spending cut

BRAZIL'S CONGRESS has defused a crisis between the approved one of President Fer-nando Collor de Mello's central economic reforms by sanctioning the closure of 11 ministries and abolition of dozens of government agencies, which will save an estimated \$700m in

This is the first controversial measure to pass in Congress since debates began last week.
Congress must approve the president's entire reform package by the end of this week.
Party leaders are negotiating adjustments to six other deaf. adjustments to six other draft measures which make up the core of the new government's

economic policies.

The measures institute a sweeping privatisation cam-paign, a new wages and incomes policy, and trade liber-alisation. They also confirm the Government's 18 month freeze on \$115bn worth of private financial assets.

Government and Congress after Mr Collor warned that any alterations to his policy's structure would undermine the

attack on inflation. Angered, Congress affirmed its right to challenge the executive, but so far has passed the Government's measures with only superficial changes.

Talks will enter a vital phase this week as Congress begins voting the six critical measures. In the past, it has resisted deregulation, closing state companies and firing civil servants. However, sensing a sea change in public opinion following Mr Collor's election last year, legislators now favour a smaller role for the Government

To the Government's relief, a much feared speculative consumption boom failed to mate-rialise over the weekend after Brazilians drew their salaries on Friday. Rising demand for black market dollars and consumer durables would have signalled a lack of confidence in the inflation policies. Retailers and black market

operators reported only a mod-est increase in turnover. They blamed slower than expected business on a cash shortage which had forced banks to limit cash withdrawals to

limit cash withdrawals to \$30-150 per person.

Bankers say Brazilians have lost confidence in the banking system after Mr Collor froze 80 per cent of bank balances. The central bank has begun printing an emergency batch of higher value bank notes to meet the sudden demand for cash.

Vargas Llosa may face a run-off as Peruvians vote

By Sally Bowen in Lima

ALMOST 10m Peruvians went to the polls yesterday to elect a new President and Congress. Voting was proceeding in the capital in almost normal conditions, though security was tight at polling stations with armed police watching from

The first exit poll, released in contravention of the law before the polls closed, gave Mr Mario Vargas Llosa, the novel-ist, 37.6 per cent, followed by political outsider Mr Alberto Fujimori, on 25.5 per cent. Mr immigrants, has enjoyed a last-minute surge in popular-

If echoed in the final vote. the two, who both follow a centre-right economic line, will go through to a second round run-off in a month or so. A 10-year guerrilla war has

placed two-thirds of Peru (temporarily including the capital, Lima) under a state of emer-gency. The principal subver-sive group, Shining Path, and the smaller Tupac Amaru Revolutionary Movement, both oppose the electoral process. Mr Vargas Llosa and his

Democratic Front alliance (Fredemo) won initial enthusiastic support when the campaign was launched 11 months ago. Voting was to have ended at

3pm local time, but was extended by two hours by electoral authorities late yesterday to allow long queues of people

Nepalese monarch bows to the forces of reform

K K Sharma and Our Foreign Staff report on how pro-democracy campaigners won over their King

THE NEPALESE King appears to have yielded to the forces of change. His decision yesterday to allow political parties came as the pro-democracy cam-paign in the Himalayan king-dom seemed to be shaking his

In the event, both King Birendra and the pro-democracy leaders pulled back from further confrontation. The King announced that he would lift a

announced that he would hir a 30-year-old ban on political parties and opposition leaders promised to end their campaign of demonstrations.

The campaign for freely operating parties and free elections in the Himalayan kingdom came to a head with the storning of the royal palace on Friday a move which showed Friday · a move which showed how far the monarch himself had become vulnerable.

Traditionally, the King is venerated as the reincarnation of the Hindu god Vishnu and has traditionally been above criticism in Nepal. But the reform movement has found

King Birendra: Under pressure directly against him. The attempt to storm the palace and the resulting clash between the army and thou-sands of demonstrators was the bloodiest violence in Nepal this century. It showed that the King's position could be attempt to storm the palace and the resulting clash between the army and thousands of demonstrators was the bloodiest violence in Nepal this century. It showed that the King's position could be endangered if he continued to resist popular feeling.

Leaders of Nepal's banned arch.

All political parties, therefore, united to launch the struggle for democratic reforms. Although the centrist Nepali Congress led by the ailing and ageing Mr Ganesh Man Singh has been in the forefront of the movement, it is supported also by the powerful

political parties have felt that the King has been a virtual prisoner of a palace coterie. Its members are unknown but members are unknown but there has been a widespread belief in Kathmandu that the coterie has prevented the King from appreciating the signifi-cance of unpalatable facts and developments like the pro-de-mocracy may ment

This is the main reason why the illegal political parties have called for the ban on their organisations to be lifted rather than the king's abdication. Restoration of party poli-tics and holding of free elec-tions would, in effect, curb the powers of the group around the King and also limit his own to that of a constitutional mon-

communist party and influen-tial student organisations. Together they successfully mobilised wide popular support for the movement. Even many members of the national panchayat, the apex body of Nepal's system of "partyless grassroots democracy", sup-ported the demand for reforms and expressed their disillusion-ment with the existing system. As a former prime minister of the country said, the aims of the movement's leaders were, first to seek an end to system.

first, to seek an end to authori-tarian rule by the monarch and the clique around him and, second, replace this by a demo-cratic system of party govern-

The movement's leaders have been unwilling to accept anything less than outright withdrawal of the ban on political parties. They rejected the controversial referendum of 1980, when 55 per cent of voters backed the present partyless system, just as they spurn -until yesterday - the King's offer of talks. Both were seen

and buy time.

After Friday's clash, it was

clear the politicians had the upper hand. The King and his advisers were forced on the Throughout yesterday there were signs that the King would

India urged to attack camps in Pakistan over strife in Kashmir

By David Housego in New Delhi

THE RADICAL Hindu BJP, one of India's most influential political parties, has called on the Government to retaliate against Pakistan by striking at training camps across the bor-der allegedly providing support to Moslem militants in Indianheld Kashmir.

In a strongly worded resolu-tion of the party's national executive, the BJP called on the Government to "knock out the training camps and the transit routes of the terror-ists." The resolution said that "Pakistan's many provocations amount to so many acts of war" and added that "hot pursuit is a recognised defensive

Though the BJP is not a member of the Government, Prime Minister V P Singh's administration depends on it for support in parliament. Its increasingly belligerent

tone comes at a time of grow-ing Indian frustration at the deteriorating situation in the northern state, where the armed forces are massively deployed against a widely supported separatist movement.

All the major towns in the
Kashmir Valley, including Srithe state of Jammu and Kashmir, were under curfew for the third continuous day yesterday as security forces carried out house to house searches to find two prominent local figures kidnapped on Friday.
Professor Mushir-ul-Haque,
vice-chancellor of Kashmir
University and Mr H L Khera, local manager of the state owned Hindustan Machine Tools company, were being held by the Kashmir Libera-

held by the Kashmir Libera-tion Front, seeking the release of its own militants.

The kidnapping came in the wake of a further hardening of positions by both the Govern-ment and the separatist move-ment. Security forces claim to have arrested more than 200 militants who had crossed militants who had crossed from Pakistan Kashmir over the last week.

Extremists yesterday phoned local newspapers in Srinagar to warn politicians and others against holding talks with Mr George Fernandes, the newly appointed Minister for Kash-mir on a viett to the Valley

mir, on a visit to the Valley. The BJP's belligerent tone at its national executive meeting in Calcutta was matched by equally strong statements from Mr Rajiv Gandhi. Congress leader and former Prime Minis-ter. He told a meeting of his executive committee that it was time the Government took "some very strong steps" on Kashmir.

"I know what steps are possible. I also know what is in the pipeline and what the capabili-ties are. The question is, does this government have the guts to take strong steps?"

S Korean minister says protectionism in the past

By ian Rodger in Seoul

CHARGES that Korea will return to its old protectionist ways after introduction on Wednesday of a package of export stimulation measures were vigorously dismissed yesterday by the Trade Minister, Mr Park Pil Soo.

There will be no going back at all," Mr Park said in an Many Korean economists

and foreign governments have feared that the new team of economic ministers brought in last month in a Cabinet reshuffle would restore restrictive policies that helped the country's economy to grow rapidly in the 1970s and early 1980s. Mr Park himself is a former

senior trade and industry ministry bureaucrat associated with those policies, but he said there was no question of retreating to the 1970s. Korean companies had to develop higher value products rather than expect the Government to use devaluations of the currency and other protectionist measures to help them fight tougher international competi-

"We have to import to increase the standard of living of the people," he said. "We need more imports of finished goods as well as raw materials. In order to do this, this ministry should open our markets as intended." Last year, the Gov-

Iran to resume natural gas exports to the Soviet Union

IRAN will resume exporting natural gas to the Soviet Union after a 10-year break under a 15-year trade pact signed yes-terday, the Iranian news agency, Irna, said, Reuter reports from Nicosia. Irna, monitored in Nicosia.

said Iran would export at least 3bn cubic metres of gas to the Soviet Union each year and annual exports could rise to

10bn cubic metres. Minimum annual revenue would be about \$300m, the Iranian Oil Minister, Mr Gholam-reza Aqazadeh, said. He added that the price of the gas exports would be calculated on a monthly basis according to

international market rates. Iranian gas exports to the Soviet Union were halted in 1980 after Moscow rejected demands for a threefold price increase.

The agency said that the Soviet Union would receive the gas at the Caspian Sea border point of Astara. Iran's largely untapped gas reserves are the world's second largest after the

Soviet Union.
Mr Aqazaden said the two countries also agreed to trans-port Iranian natural gas to Eastern and Western Europe through the Soviet Union and had discussed the possibility of building a pipeline to Europe through Turkey.

Argentina says it will keep pressing UK over Falklands

THE Argentine Foreign Minister, Mr Domingo Cavallo, said yesterday that his country will keep pressing Britain over the issue of sovereignty for the South Atlantic Falkland islands, which Argentina calls the Malvinas, Reuter reports. Mr Cavallo, the most senior Argentine official to visit Britain since the 1982 Falk-lands war, said in an interview

that he hoped growing confi-dence between the two nations would lead to the right climate for negotiations. "Argentina restates and will continue restating that at the same time it claims soveralways be prepared to respect the interests of the inhabitants of the islands," he said. Mr Cavallo will have lunch with Mrs Thatcher today and is also expected to sign an agreement lifting visa require-ments after talks with the Foreign Secretary, Mr Douglas Hurd Britain and Argentina restored full diplomatic links, broken when Argentine troops invaded the Falklands, after talks in Madrid last year.

eignty of the islands it will

Mr Cavallo said a strong democracy and solid economic growth would bring the islanders around to accepting talks.

Reformers in Mongolia sharpen up their campaign By Robert Thomson in Ulan Bator

MONGOLIA'S newborn democracy movement was baptised by Gobi desert dust yesterday at the opening of its first national congress, while the ruling Communist Party attempted to bolster its popu-

larity by dismantling 10 minis-The 800 democracy delegates to the one-day congress, some who had travelled by horse and ous for several days from remote herding villages, gathered in Ulan Bator's cultural palace to approve a political agenda. This included the embracing of a market econ-omy and revival of traditional Mongolian culture, long stifled in the world's second oldest communist state. Meanwhile. the Communist Party, attempting to slow the democracy movement's momentum, announced the restructuring of the Government and the dumping of six ministers in an answer to widespread complaints about an inefficient and bloated bureaucracy.

Ministries of agriculture and light industry were merged, as were health and social security, while the ministry for communal services was among those to disappear. A film director was appointed culture minister and a scientist was chosen to head a ministry of technological progress. Sanjaasuren Zorig, the de

facto head of the Mongolian Democratic Party, said that the Government was in need of an overhaul, but the Communist Party had made the changes in "a random and unscientific way." He argued that the announcement would "produce little if any effective changes."

Zorig began his speech to the party's congress with a condemnation of the present Government's economic record and a lament at the country's indebtedness to the Soviet Union, estimated at roubles

et-backed "revolution" in 1921. With elections possible in

FT SATELLITE MONITOR

Dish sales decline to lowest monthly total

By Raymond Snoddy

INSTALLATION of satellite annual revenues for Sky and television dishes in the UK appears to have come to a virtual halt in the run up to the launch of British Satellite and revenue for all the launch of British Satellite advertising based satellite channels," Continental says.

The FT Satellite Monitor's lath monthly survey of the satellite television market in the UK appears to have come to a virtual says.

The Continental survey is based on interviews with a representative sample of more than 4000 adults. The number

13th monthly survey of the sat-ellite television market in the UK found that an estimated 10,000 dishes were bought or rented in March. That was one of the smallest monthly figures

in the survey. It means that 639,000 households now have satellite televi-sion equipment. A similar number receives the new satellite television channels on cable networks in the UK and the Republic of Ireland

This is probably the Iuli tions has been accompanied by before the storm and reflects: a marked decline in February real lack of demand because of and March of the potential poll tax - and a holding back before the launch of BSB," said Mr John Clemens, chairman of Continental Research which carries out the survey for the Financial Times. British Satellite Television, whose main shareholders

include Pearson, publisher of the Financial Times, plans its official launch of five channels including a subscription movie channel on April 29.

Dish sales appeared to be flat in March but there is better news for the subscription film channels which are vital to the finances of both Sky and BSB. Two out of three households with dishes were either are subscribing to a movie channel or intended to subscribe.

Continental has forecast that there will be 5m satellite dishes in the UK by the end of "That would mean

These 630 sites use about 35m therms of gas a year, which would represent by far the biggest contract yet lost by British Gas in the newly liber-

British Gas in the newly liber-alised commercial gas market.

The first gas contracts which were signed by independent suppliers earlier this year have tended so far to be with single-site industrial customers.

The Midland Gas Consor-tium is due to resume negotia-tions this week with Quadrant, a joint venture between Esso and Shell, and has been talking to Associated Gas Services, a company headed by Lord Ezra,

No independent supplier

But Mr Whorwood said he hoped that gas from an inde-pendent supplier would flow to

than 4,000 adults. The number

of dish-owning households identified in the sample in

of the survey for the UK population involves a margin of

error of phis or minus 40,000. The new plateau in installa-tions has been accompanied by a marked decline in February

narket with about 1m fewer homes saying they either had or intended to install satellite

television. A total of 458,000

over the country.
Mr Clemens believes that the

drops case in tin price dispute

By Kenneth Gooding, Mining Correspondent

SHEARSON Lehman Hutton and its commodities offshoot have dropped legal proceed-ings against seven former members of the London Metal Exchange committee arising from the 1985 collapse of the International Tin Council's price support scheme.

The two Shearson compa-

nies, part of the American Express banking group, have withdrawn their notice of appeal against a UK High Court judgment in March last

The LME said at the time that the High Court judgment vindicated actions by the committee after the council ran out of money to support prices and faced claims totalling more than 2500m. The High Court last year awarded costs against the Shearson companies which later served notice

of appeal.

The 22 member countries of the council paid its 36 creditors £182.5m as part of an out-of-court settlement on March 30 this year. Under the terms of the agreement, the creditors framed all outransian litters. dropped all outstanding litiga-tion against the countries in London and elsewhere.

Haughey sees extradition problems easing | Model B By Kieran Cooke in Dublin

MR CHARLES HAUGHEY, the Irish Prime Minister, has said that recent controversial extradition judgments by the Irish Supreme Court mark only a "temporary phase" and that in future he expects no problems between Britain and the

Republic of Ireland.
Last week the Irish Supreme
Court refused to extradite Mr
Owen Carron, wanted in Northern Ireland on firearms charges. The court judgment was based on the view that Mr Carron's alleged offence was political.

Three week ago the Supreme Court gave a similar ruling in the case of Mr Dermot Finucane, wanted in Northern Ireland for taking part in a mass IRA prison break-out in

Mr Haughey said that the cases of Mr Carron and Mr Finucane had been brought under the terms of pre-1987 Irish law which allows for a defence against extradition on political grounds. Mr Haughey, describing present Irish extradition laws as "among the best in the world," said that since 1987 the complies had incorporated republic had incorporated European rules on suppression

of terrorism into its law.

Mr Haughey said that in future extradition cases the courts would not allow a politi-cal defence to be made by those wanted in connection with crimes of a terrorist

a form of political activity, to This will do away with

Charles Haughey: extradition difficulties will not seriously affect Anglo-Irish agreement

resent difficulties." said Mr. Haughey. "The Anglo-Irish Agreement will not in any way be seriously affected by pres-

ent circumstances."
But Mr Garret FitzGerald, the former Fine Gael Prime Minister, has warned that if recent Supreme Court judg-ments were allowed to stand. they would amount to condon-ing anarchy in Ireland.

The right of individuals, as

raise an army and wage cer-tain forms of war in the name of the Irish people against the wishes of the majority has been asserted by the Supreme Court," said Mr FitzGerald.

Mr Haughey accused Mr FitzGerald of making irrespon-sible statements. Mr Haughey is due to go to Belfast this week in his capacity as presi-dent of the European Council, to address a meeting of the Institute of Directors.

But it appears that in the light of recent events and because of the possibility of large-scale protests Mr Haughey's trip is now in doubt. Mr Peter Brooke, the North-ern Ireland Secretary, has said

he has been greatly disturbed by recent events in the Irish courts which had created the impression that terrorists might feel there was a safe haven for them within the

clearing makes its **UK** debut

By David Barchard

SOCIETE GENERALE, the French Banking Group, today introduces a new clearing sys-tem for UK stockbrokers which it says will enable them to cut

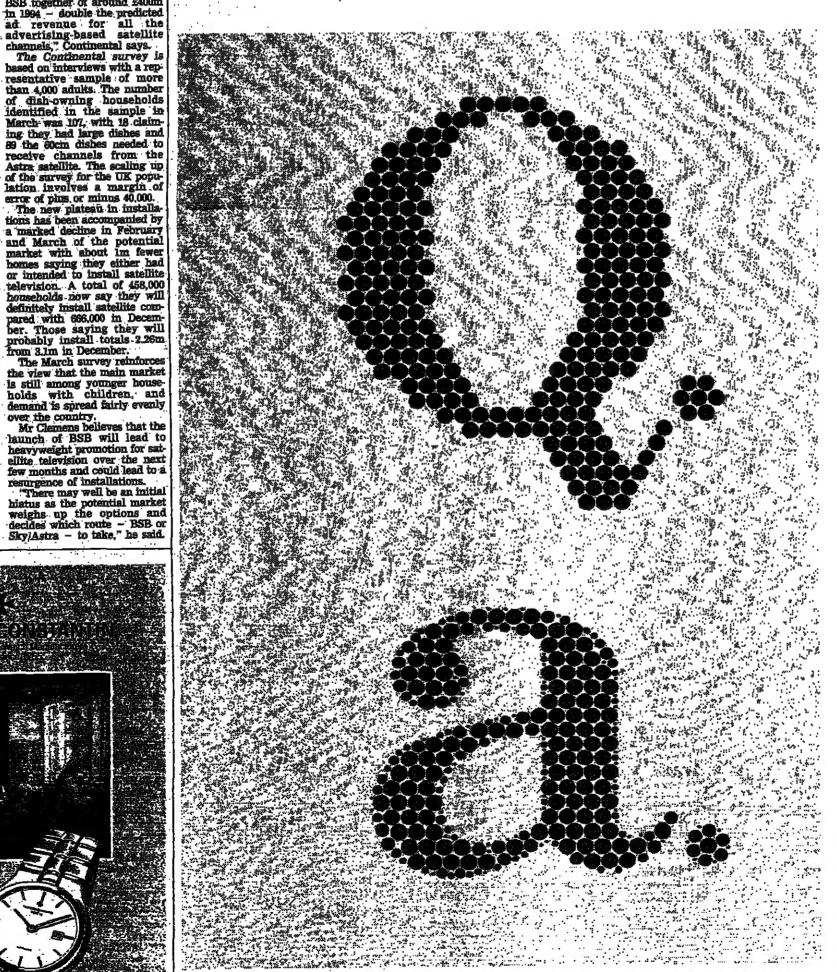

their fixed overheads costs. It is believed to be the first time the system, known as Soclear, a Model B clearing system, has been offered to stockbrokers in the UK. It handles all transactions on behalf broking customers from the point of execution to final set-tlement.

Model B clearing is an arrangement whereby a stock-broker delegates financial responsibility for client and market settlements to a spe-cialist third party clearing company. As a result stockbro-kers can substantially reduce their funding needs and eliminate completely the need to meet counter-party risk

Soclear will be based in Car-diff and for the first three months of its operations it will serve six stockbroker firms.

Mr Stephen Pinner, director of Société Génerale Clearing Service, said: "This development is similar to services launched in the UK since their deregulation.'

Why even-sized dots make uneven letters.

First, a straightforward bit.

Dots of the same size look perfectly neat and orderly when they're in a straight row.

But when the dots used by most printers are formed into a letter, they suddenly become very awkward and unhelpful.

They leave spaces along the edge of a curved line. They bunch together at intersections.

That's how a word like smooth can end up looking rough.

So with typical ingenuity and imagination Hewlett-Packard have developed a laser printer that produces extremely even letters, by using very dissimilar dots.

The Hewlett-Packard LaserJet III.

Now for a technical bit.

The HP LaserJet III uses something very clever called Resolution Enhancement Technology to actually vary the size of

It can create tiny dots to fill in the spaces along a curve and make a smooth, unbroken line.

The combination of large dots with small ones makes blacker, stronger letters.

Using your existing software it produces text and graphics that are clearer and cleaner than ever before. Yet it's still compatible with HP's world beating LaserJet Series II.

The HP LaserJet III also uses PCL5 printer language (which includes HPGL/2) for vector graphics) to provide more fonts in more sizes through scalable typefaces. It prints special effects such as shadowing, mirror images and white out of black. It can even print portrait and landscape on the same page.

A printer like the HP Laser Jet III could only have come from a company like Hewlett-Packard.

As the world leaders in Laser printers, we've never believed in being the same size as our competitors.

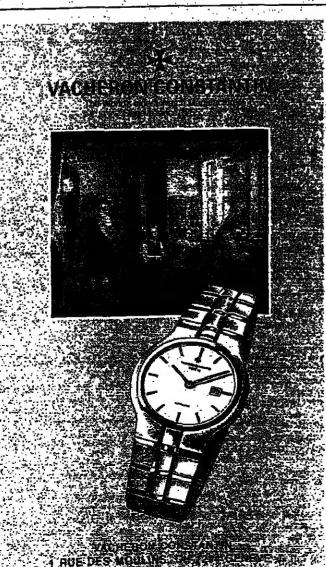

Now for an unbelievable bit.

All this for just \$1999 (excluding VAT).

For further information call (0344) 369369.

eighth day.

The body was in the prisoner's cell where there had

been a fire. The trouble at Dartmoor bad ended by the evening and Mr John May, the governor, said that all but one prisoner bad surrendered.

At Strangeways negotiators were preparing to make contact with the 20 or so protesters still in place in spite of a barrage of noise overnight designed to force them out. Mr David Bfellor, Home Office minister responsible for prisons, described the Dartmoor disturbances as a "copy-cat incident" and denied that complaints about conditions in the prison had "any legiti-

"It is a problem of running a prison system that it is an unstable situation." he said. "If people want to cause trouble, there is always scope for them

Mr Barry Sheerman, an opposition home affairs spokes-man, called for an urgent inquiry into the prison system and urgent steps to reduce the number of people in fail.

Accusing the Government of having its head "stuck firmly in the sand," he said: "For years, prison reformers have warned the Government that filling our prisons to overflowing and ignoring the changing nature of prisoners and their behaviour would store up trou-ble for the forces of law and

But Sir John Wheeler, the Tory chairman of the all-party home affairs select committee of MPs, said that after three big inquiries into disturbances in prisons over the last four to five years the Government was already "awash with ideas and recommendations."

At other jails yesterday, staff regained control at Cardiff prison, the Home Office said, after three hours of disturbances in which two officers were injured.
At Leeds, prisoners were

back in their cells after staging a sit-down protest in their exercise yard, the Prison Officers

Association said.

Three prison officers were taken and treated for cuts and bruises after prisoners at Brix-ton jail in south London held a

sit-down protest.
A total of 300 prisoners were
evacuated at Pentonville in north London after a gas pipe was pulled from a wall. They were returned within an hour.

Role of invisible exports council is studied by Bank

By David Barchard

THE BANK of England is considering a more active over-seas role for the British Invisi-Exports Council, the umbrella organisation representing companies whose income is from the sale of financial services outside the

Interest in the BIEC's activities has grown sharply in the past few months as a result of a £713m deficit on the UK invisibles account in the final quarter of 1989.

The future of the BIEC which is privately funded by a group of institutions, including the Bank of England, at a total

annual cost of £700,000 - has been studied in two reports submitted to the Bank in the

The reports examined the possible merging of the BIEC with the British Overseas Trade Board, a government-funded body, to create a single representational organisation for all British exports. The reports also looked at the effectiveness of the BIEC's overseas missions, and promotional

The Bank is now considering the future of the BIEC and urging it to look more closely at its members' needs.

Charter decline gives small airlines a bumpy ride

Three carriers have gone out of business recently and others may be in difficulty, says Paul Abrahams

be small in the British airline business. Three carriers have gone out of business this winter, and, in an industry prone to gossip. rumours that other airlines are in trouble appear unusually

"What we are witnessing is a strong trend towards consoli-dation throughout British civil aviation, and one that will undoubtedly continue for the rest of the year," says Mr Michael Bishop, chairman of British Midland, the UK's second larg-

est carrier.

The carriers that have been hit hardest have been charter operators. The three airlines that ceased trading recently -British Island Airways, Paramount Airways and Novair, owned by the Rank Organisation - were all heavily com-mitted to the charter market.

"it's no secret that the bot-tom has fallen out of the charter market," says Mr Graham Hutchinson, managing director of Dan Air, the UK operator. "Holiday bookings have fallen considerably over the last 12 months. High interest rates and consumer resistance to spending hours of holiday time at Gatwick delayed by air traf-fic control problems have both taken their toll."

Most charter companies are trying to reduce capacity by selling jets or by leasing air-craft to other airlines. Dan Air, for example, has leased jets to Australia and Malta and has sold one of its Airbus aircraft. Another response has been to shift capacity away from the cheaper Mediterranean routes

to long-haul destinations in the Middle and Far East. Some operators have also tried to reduce their vulnera-bility to a downturn in the

Queneing at Heathrow: landing charges may force small carriers out of big airports

charter market by developing scheduled operations The whole of British civil aviation is passing through a difficult period but the smaller airlines are particularly vul-nerable. First, British airlines' cost base has risen sharply over the past year because of several factors, many of which affect smaller airlines disproportionately. They include:

Airport landing charges. BAA, formerly the British Airports Authority, has increased landing fees for smaller jets at Heathrow to the same level as cost base has risen sharply

Heathrow to the same level as those for Boeing 747s. Brymon, one of the UK's smaller airlines, estimates that its landing fees went up 49 per cent on

April 1. It fears that BAA may be using the pricing mecha-nism to force smaller carriers out of its airports. BAA argues that landing fees should be the same for smaller jets because they take up the same air

space as 747s.

The smaller airlines are also oncerned that the Civil Avia-tion Authority, which is due to publish a report in July on air-port congestion in south-east England, will recommend that aircraft smaller than 30 seats should be banned from Heath-

 Air traffic control charges have increased. Some airlines say their charges have gone up by 45 per cent to pay for

£600m-worth of systems to relieve congestion over the UK in the next 10 years. Security charges have gone up after security was tightened at airports following the Lock-

erbie bombing.

Aviation fuel costs increased by as much as 35 per cent in Europe in the last quarter of last year. The rise in fuel prices is slowing, but the additional cost has affected profits.

Higher interest rates have dampened demand for holiday air travel and have increase the cost of aircraft ownership. Costs could rise further with

the introduction of new trans-

of aviation legislation, almost all of which implies additional cost to the whole industry," says Mr Graham Hutchinson, Dan Air's managing director. "At the same time, the other is mesmerised by deregulation which should bring down ticket prices. At some point the two halves will have to talk to each other."

Some of the small and medium standard stripes have rulled

"One half of Brussels is try-ing to bring a veritable torrent

Some of the small and meal-um-sized airlines have pulled out from unprofitable routes in an attempt to offset the addi-tional costs. Air Europe, the carrier owned by the Interna-tional Leisure Group, stopped flying from London to Geneva this graing while Day Air has this spring, while Dan Air has halted operations between Gatwick and Dublin. London City Airways, which is partly owned by British Midland, has halted operations from London City Airport to Amsterdam and reduced flights to Paris. The airlines are also trying to shift their scheduled capac-

ity to more profitable routes. This, in part, explains the lobbying by some of the UK's smaller airlines to prevent the deal between British Airways, KLM Royal Dutch Airways and Sabena to create Sabena World Airlines in Brussels. The UK carriers hope their opposi-tion will oblige the Govern-ment to force British Airways to cede routes to them in the same way that the national airline was forced to do so after

the British Caledonian deal.
The smaller carriers are also
moving their services upmarket, attempting to target the lucrative business travel

Several carriers are also seeking to exploit other areas of business. Dan Air is developing its engineering activities and other airlines are increasingly moving into the aircraft leasing and management business. In 1988 International Leisure Group, which owns Air Europe, made £12.2m — about a third of its profits — from selling three of its Boeing jets and through leasing activities. It is also planning to obtain 22 Boeing aircraft over the next three years which it will either operate itself or lease to other operate itself or lease to other airlines.

Some in the industry believe that the days of the small independent airline may be numbered despite attempts to

adjust.
"The single European market in 1992 may sound like a golden opportunity," says Mr Mike Bathgate, commercial director at Brymon. "And there are indeed opportunities, but there are also significant problems. It is almost impossible for small carriers to break into for small carriers to break into new markets against existing operators because of high mar-

operators because of high mar-keting expenses."

Mr Bathgate, whose airline is partly owned by British Air-ways, believes the smaller car-riers need to set up strategic agreements with the larger companies. Recent events appear to bear out this view.

Dan Air is understood to be in Dan Air is understood to be in negotiations with at least one European national carrier. International Leisure Group, which owns Air Europe, is also believed to have been talking

to other European airlines. Once the European Commission has decided the fate of the Sabena World Airways and Air France-UTA deals, there may be a rash of takeovers in European aviation. In the meantime the future of small and medium-sized carriers remains up in the air.

port regulations which are being produced by the Euro-More competition sought for council waste contracts

WASTE MANAGEMENT companies hope that government guidelines, due within the next week, will increase the private sector share in the annual £1bn

business of collecting domestic rubbish.

The guidelines will provide detailed rules for local authorities putting waste collection and other service contracts out to tender to the private sector. Under the 1988 Local Government Act, all district and borough councils in England must organise the contracts on

the basis of competitive tendering by 1992. That has followed ministers' wishes to involve private companies much more with work traditionally done by council workers.

Of the estimated 200 contracts awarded so far by councils for rubbish collection, it is believed that 80 per cent have been won by the authorities' own waste collection departments.

The National Association of Waste

The department said it was investiga-ting six authorities suspected of having Disposal Contractors, which represents

a number of large waste management groups such as Cleanaway and Rechem, said it believed some of the tendering organised tendering in such a way as to bias the selection procedure towards their own staffs. The councils are Wolverhampton, West Midlands; Knowsley, Merseyside; Eden, Cumbria; Charn-wood, Leicestershire; Braintree, Essex; procedures had been unfair. The Department of the Environment said the new, tighter guidelines would stipu-late the way in which authorities would and Bristol, Avon. put service contracts out to tender and

Hillingdon council in west London has already been found to have failed to follow guidelines and has been ordered to cancel a vehicle maintenance con tract awarded to its own labour force.

Japanese demand lifts pottery exports

By Alice Rawsthern

THE BRITISH pottery industry is enjoying strong export growth thanks to demand for traditional British china and porcelain in Japan. In recent years manufactur-

ers have invested in developing the Japanese market, where there is healthy demand for western luxury goods. Manufacturers include Royal Doulton, a subsidiary of Pear-son, which also owns the Financial Times, and Waterford Wedgwood. China and porcelain manu-

facturers export two thirds of their output, with the US tradi-tionally the main overseas market. That makes export performance vulnerable to sud-den swings in the sterlingdollar exchange rate.
The value of china and porcelain exports to Japan rose by

facturers' Association. The increase helped compen-sate for a slight fall in exports

37 per cent last year according to the British Ceramics Manu-

to the US and contributed to the 8 per cent increase in the

Ulster MPs to vote with rebels

TORY MPs planning to vote against the Government over the issue of British passports for Hong Kong citizens were heartened yesterday by the decision of eight Ulster Unionist MPs not to support the bill in the Commons.

Within the Tory party differences over the future of Hong Kong continued as Mr Robert Adley, Tory chairman of the all-party British-Chinese Parliamentary Group, accused Mr Francis Maude, a Foreign Office minister, of "blundering around over Hong Kong trying to stir up a Falklands-type cri-

sis."
MPs will vote the day after they return to Westminster from the Easter recess on the Government's plans to give British citizenship to 50,000 Hong Kong Chinese heads of

Mr Bowen Wells, one of the Tory MPs leading the rebeilion, said yesterday that the Ulster Unionists' decision would be 'significant" in the vote. The Government wants to avoid this discussion in the Com-

to restore Tory calm

mons itself, which the rebels believe gives them the best prospect of success. But Tory party managers insist that the Government

will win the votes on the bill when MPs return to Westminster after the Easter break, even though it is too early to be certain whether the figure of 60 backbench Tory rebels is

accurate. Mr John Taylor, the Ulster Unionist MP for Strangford, said that the party had decided to revise its previous "sympathetic" attitude to the bill because that gesture had met with a "total lack of interest" from the Govern-The reinforcement for the rebellion undermined the attempt at the weekend by Sir Geoffrey Howe, the Deputy Prime Minister, to steady the Tory party, as two opinion polls confirmed Labour's lead

37-hour week

By Michael Smith, Labour Correspondent

shipbuilder, has offered its manual workers a 37-hour week, to be introduced by April of next year, in a pro-posed deal that will influence pay negotiations both in other shipyards and at other south coast companies.

It is thought that, if the 1.200 manual employees accept the deal, they would be the first shipyard workers in the country to win a commitment for a two-hour reduction in the working week after the start of a national union campaign for

hours reductions.

Mr John Simmons, chairman of the local branch of the Con-federation of Shipbuilding and Engineering Unions, said Vos-per was also the first large company in the Southampton area to offer a 37-hour week

Nationally the unions say they have won agreements for 37-hour weeks at about 130 factories. Although the pace of change is quickening, the vast majority of blue collar workers in engineering remain on 89

hours. The unions, who have been supporting a strike over hours at British Aerospace's Kings-ton upon Thames site since September, are planning strike ballots next week at 11 plants

VOSPER THORNYCROFT, the owned by Lucas Industries and

Weir Group.
These will be followed by ballots at 34 plants, owned by various companies, around the country --

Vosper Thornycroft's offer of a 37-hour week, including a one hour cut from July, was tabled at the end of last week as unions prepared to order an overtime ban over the company's .two-year pay offer which would have given 8.02 per cent from April 1, another 2 per cent in January and the inflation rate from next April.
The latest offer would give
an immediate 9.02 per cent on

an intimestate soiz per cent on the weekly rate, plus 1 per cent from next January and the rate of inflation from next April.

) Mr Martin Jay, managing director, said the hours reduc-tion would be self-financing. through productivity improvements. Assuming the offer was accepted, the company was delighted to have achieved the stability afforded by a two year

Mr Simmons, an official of the MSF general technical union, said that, taking the hours cuts into account, the hourly pay for skilled workers would rise during the two-year deal by about 24 per cent to 56. He and other pegotiators were

Mike Smith reports on how an innovative package is benefiting one textile machinery manufacturer

machinery manufacturer, recently won a pay and condi-tions package worth more than 12 per cent. Even though the agreement was more than 4 percentage points above infla-tion, there could be no ques-tion about whether they had

That certainly stems from a pay determination scheme which links wage increases directly to productivity. The scheme is part of an innovative approach to industrial rela-tions brought in after the com-

pany's couriship with bank-ruptcy in the mid-1980s. Drawing on Japanese ideas, the Bonas agreement with its manual workers allows for manual workers allows for pendulum arbitration if both parties agree. The company also negotiates with employees through a company council, encourages teamworking, uses the team briefing system and has a high degree of flexibility among its workforce. Bonas, which employs 320.

Bonas, which employs 320, has had problems in introducing its ideas. Team briefing has been resisted, because of fears it may erode union power, and the latest agreement makes clear that workers have a right to refuse to take part. More seriously, Bonas last year suf-fered a nine-day strike after manual employees rejected its pay offer — partly, the com-pany thinks, because they did

WORKERS AT Bonns Machine, not understand it – and then a north-east of England textile refused pendulum arbitration. None the less the company says its unusual approach to industrial relations has played a part in a revival in fortunes which has seen an operating loss of £3.2m in 1984 being turned into a profit of more

Mr Ian Harris, managing director, says Bonas was within days of receivership when, in 1984, he and a sleeping partner bought it from the Bonas family, which had founded it in the early 1950s. Prospects improved dramatically through its development of electronic machinery, in one of the last industries to undergo a technological revolution. However, progress was restrained by outdated premises in Sunderland and a dispirited work-Mr Harris saw his chance to

tackle both problems through relocation. He says that had he been starting from scratch the North East would not have been his ideal site but the company felt bound to provide security of employment to existing workers if it could.

Its willingness to do so depended on their agreeing to fundamental changes. "We put a management shopping list to them and said either you agree to this or we relocate else-where," Mr Harris said. where," Mr Harris said. Although there was considerable suspicion the then work-

Ian Harris: won approval for management shopping list force of 220 gave its approval within daily travelling distance

and the company moved to a £5m plant on the Team Valley of Sunderland. Mr Harris says that, although Bonas looked at the trading estate in Gateshead.

agreements that other companies, including Nissan nearby and Yamazaki in Wales, had with their workers, its own deal was not a crib of any particular group. "It was all good sense. When we looked at pendulum arbitration, for example, we were astonished to find

it was so rare." The power of the company agreement's pendulum arbitration clause is debatable, given the workforce's unwillingness, shown last year, to sanction its use. Less in doubt is the increased flexibility of workers. After the signing of the 1986 Bonas agreement with the Amalgamated Engineering company, employees are expec-ted to inspect their own work more closely, tidy up after themselves and, most impor-tantly, take on new technology jobs which they would have baulked at under the previous

All of these are becoming increasingly common in Brit-ish industry. What sets Bonas apart is the pay determination scheme which Bonas intro-

duced on relocation. Under the scheme, employees are paid lump sums twice a year from a value-added bonus system. The size of the bonus depends on the extent to which the company has grown during the previous year. Value-added is defined as the difference between the value of goods and goods and services bought. This is then compared with the previous year to give a percentage rise. After the bonus is paid, only some of the money is consolidated into basic sala-

Whatever percentage is consolidated, neither it nor the bonuses can exceed productivity growth in percentage terms. Bonas is thus one of the few companies in Britain which can never be accused of concluding deals which harm

productivity levels.
That, at least, is the theory. On the shop floor there is considerable doubt that workers would be prepared to forego a hit trouble.

In recent guidance to the workforce, the company said that some Japanese companies have value added performances that are "four times

better than ours."
It is confident that with the position it has in the market place - it now claims 55 per tronic jacquard machines -there is no prospect of value-added not growing and that, in the meantime, the bonus scheme acts as a powerful

motivator of workers.

Mr Harris insists that there would be no pay rises if value added did not grow. "That will be the acid test," he said. "I hope it never comes to that."

Teacher dismissals called 'scare stories'

By Liea Wood, Labour Staff.

REPORTS of teachers being

ears

retary.
Mr MacGregor was speaking at the Secondary Heads Associate the secondary management of the secondary seneral meeting: ation annual general meeting: Local Management of Schools: (LMS), with local education authorities obliged to give schools control of their budgets, came into force in most LEAs this month.

the National Association of Schoolmasters/Union of Women Teachers, have claimed that dozens of teachers have been threatened with redundancy since this

Mr MacGregor said: "Of course the launch of LMS has been accompanied by well publicised scare stories about teachers being sacked - quite falsely attributing particular issue - and about LEAS problems in giving schools their budgets on time." The average/actuals issue

involves part of schools' budgets being assessed on average pay scales, along with class size. Unions claim this means

management of state schools with small classes and experienced teachers lose out. Ms Hilary Armstrong, were described yesterday as Labour's education spokes—"scare stories" by Mr John woman, told the conference MacGregor, the Education Section 1980. agement of schools was "insen-sitive and bureaucratic" and

was already leading to severe cutbacks in teachers. She said: "It is already clear that in some schools, senior teachers are to be 'surplus to requirement' because schools simply cannot afford them."

According to the NAS/UTW Britain's second largest teach ing union, teachers in seven counties have been warned they could be out of work as

early as September.

Mr Nigel de Grachy, general secretary-designate of the ing evidence that head teachers and chairs of governors are siding up to individual teachers and announcing that they are to be made redundant. This practice is deplorable and ments of consultation and proper procedures required under redundancy legislation." He said that in Nottingham-

shire, 32 teachers had been threatened with redundancy and there were similar prob-lems in other counties.

Report urges reforms of ESOPs to help growth

EMPLOYEE Share Ownership ment of ESOPs on changes of Plans (ESOPs) should be ownership, IPPR points out. reformed to encourage their spread, argues a report published today by the Institute for Public Policy Research, the

think tank set up to influence Labour and trade union policy. The report acknowledges that ESOPs have been controversial within the Labour movement, but argues that those who want to see a long-term shift in the economy towards a greater equality of wealth and influence should

welcome ESOPs."
For tax purposes, investment by employees in their own companies should be treated in the same way as contributions to pension funds, the report says in its argument for reform.

To encourage the funding of ESOPs in public companies, excess sums in pension funds should be wholly or partly exempt from tax if they are given to an ESOP as an inter-

est-free loan IPPR adds.
In addition, the report
argues that there should be more flexibility on the timing of distribution of shares and voting rights should be made available to employees before shares are issued or loans paid

Trade unions have already co-operated in the establish-

ownership, IPPR points out, but they should also press for the setting up of ESOPs in existing firms.

There are situations where the encouragement of employee ownership may provide a technique for public intervention, such as the provi-sion of venture capital for small firms, the "resocialising of privatised services" and the break-up of monopolies and the rescue of companies in trouble, the report states.

Michael Lindemann write

An ESOP at Chesterfield Transport, formerly Chester-field's municipal bus company, means employees own 85 per cent of the new company -the furthest extension of employee ownership yet, according to Mr Malcolm Huriston, Director of the ESOP

Employees have subscribed directly to 10 per cent of the shares and a further four per cent have been bought by the Employee Benefit Trust (EBT). The balance of the 22.45m pur chase price was financed by loans from the Unity Trust

TUC warns on ballot code

By Lisa Wood, Labour Staff

LABOUR RELATIONS will be harmed under a new Govern-ment code on ballots for industrial action, the TUC has warned

Union leaders fear that the code, which takes effect on Wednesday, will give employers increased scope to chal-lenge ballot results in the

courts.
The Government has said that the code itself imposes no legal obligations but, Mr Mich-ael Howard, the Employment

Secretary, has said that "its provisions will be admissible in evidence and are to be taken into account in proceedings before any court where it considers them appropriate."

The TUC, whose warning comes in the latest issue of the TUC Bulletin, said existing union ballots were fair and lawful and that the Government was moving the goalposts in an effort to reduce the 90 per cent success rate for unions in

MANUFACTURING SYSTEMS SOFTWARE, BY SEMA GROUP

Harnessing resources to reduce lead times and increase management responsiveness is a major goal of computerised systems in industry. As it is of Sema Group, the successful fusion of CAP Group in the UK and Sema Metra in France, on behalf of many customers and in diverse applications. Examples are order handling and involcing at United Engineering Steels; comprehensive parts-control for Citroën in Spain; data analysis and production scheduling for Dow Benelux; maintenance management for Bridel Food Group; warehouse control for Monsanto; and productionmanagement systems for Siemens. Small wonder then how Sema Group, one of the world's largest in software and engineering services, has worked its way to a turnover approaching £300 million and a complement of 7,000 highly skilled and qualified personnel: it understands how to mesh with customers. So as to bring out the best in them.

Knowledge applied SEMA GROUP

FINANCIAL TIMES CONFERENCES

INDUSTRY AND ENVIRONMENT

Companies in industrialised nations are becoming more aware that they have to put their businesses in order if they are to avoid ever-tighter government regulations to reduce a broad range of pollution problems. How severe a penalty is protection of the environment imposing on industries? Is it an economic threat or an opportunity for companies to use green products to increase sales? The issues will be be debated by a distinguished panel of politicians, industrialists and environmentalists.

Speakers include: Dr Edward Bennett, Director, Nuclear Safety, Industry and Environment, Civil Protection, DG XI, Commission of the European Communities; Brice Lalonde, French Secretary of State for the Environment; Stanley Clinton Davis, the Former EEC Environment Commissioner; Jacqueline Aloisi de Larderel, Director, Industry & Environment Office, UN Environment Programme; Dr Herbert Gassert, Chairman, Environmental Policy Committee, Federation of Germany Industry (BDI); Bradford S Gentry, Partner, Goodwin, Procter & Hoar: Dr David Williamson, Chairman, du Pont de Nemours International SA; Anthony Cleaver, Chief Executive IBM United Kingdom Limited and Sigvard Höggren, Vice President, Environmental Affairs, AB Volvo.

FINANCE, INVESTMENT AND TRAILE WITH THE SOVIET UNION 30 & 31 May 1990 - Moscow

The Financial Times, the Royal Institute of International Affairs and IMEMO, the Institute of World Economy and International Relations of the Academy of Sciences, have joined forces to arrange their first international business conference in Moscow at the end of May.

The drastic political and economic changes affecting the Soviet Union open significant opportunities to Western business as a more market based economy develops. This important and topical conference will provide a rare opportunity to listen to, debate and meet leading Soviet figures from Government, the Party, industry and finance and the agenda gives equal stress to politics, economics, trade and finance.

Dr Aleksandr Yakovlev, Senior Member of the Politburo, is to be the principal speaker from the USSR and the list of distinguished Soviet contributors includes: Dr Leonid Abalkin, Deputy Prime Minister and Chairman, State Commission for Economic Reform; Viktor Gerashchenko, Chairman of the USSR State Bank; Dr Oleg Bogomolov, Director, Institute of the Economics of the World Socialist System: Academician Vladimir Tichonov, Chairman, All-Union Leggue of Contracturies and Vladimir Attunian socialist System: Academician Vladimir Tichonov, Chairman, All-Union League of Co-operatives and Vladimir Arutunian. Chairman and Managing Director, Sojuznefteexport (SNE). The list of eminent figures from OECD countries includes: Stephen Bechtel Jr. Dr Wim Duisenberg, Francesco Gallo; Ryoichi Kawai; Dr Axel Lebhan; Dr Klaus Liesen; Dr Peter Wallenberg, Richard Webb and Otto Wolff von Amerongen.

LEVERACED DUY OUTS -THEIR FUTURE AFTER DREXELS

This major conference for buy out specialists, venture capitalists, industrialists with operations to sell and managers minded to buy their businesses, focuses on Britain, the United States. France, Germany and Italy. The effects of the Drexel problem will feature. Among the speakers are: Mr MacPherson of 31 pic; Mr C Stenham of Bankers Trust Company; Mr J Gordan Bonnyman of Charterhouse Development Capital: Mr David S Haggett of Evershed, Wells & Heid; Mr Robert H Smith of Morgan Grenfell Development Capital Ltd; Mr James Watson of NFC plc; Mr Charles Ames of Uniroyal Goodrich Tire Company; Mr Arnaud Bertrand of KPMG Fiduciare de France; Mr Bernd Fahrolz of Dresdner Bank AG; Mr Paolo Colonna of Schroder Associati; Mr C R E Brooke of Candover Investments plc and Mr Theodore J Forstmann of Forstmann Little & Co.

All enquiries should be addressed to:

APPOINTMENTS

Lloyds Bank Stockbrokers senior posts

■ Following his appointment as chairman of the International Stock Exchange settlement services board, Mr Peter Minchin has become deputy chairman of LLOYDS BANK STOCKBROKERS in addition to his post as deputy chairman of Lloyds Merchant Bank. He is succeeded as managing director of Lloyds Bank Stockbrokers by Mr Robert Froy.

■ CHESTERTON has appointed Mr Giles Ballantine as chief executive. He was London regional managing

■ Henderson Investment Services, a subsidiary of HENDERSON ADMINISTRATION GROUP, has appointed Mr James Robinson to the board as head of the Far East team. He was a director of Mercury Asset

Dr Peter Fleming (above) has been appointed technical director of 3M UNITED KINGDOM, Bracknell, replacing Dr David Sanders who returns to the US as manager, new products department. Dr Fleming was technical director, commercial graphics division, St Paul, Minnesota. He will be in charge of the company's six laboratories in the UK.

Mr Richard Chalcraft, joint managing director of EDMOND HOLDINGS, has additionally been appointed group chief

Mr Martin Taylor, vice chairman of Hanson, has been appointed chairman of the CONFEDERATION OF

companies committee, succeeding Mr Ian Butler, chairman of the Cookson Group.

■ SYLTONE, Bradford, has appointed Mr Graham Killarney as executive vice president of its principal US operation, Drum Industries inc. He was president of B. Elliott Inc. selling UK machine tools in North America.

m Mr Sax Riley has been appointed a vice chairman of SEDGWICE GROUP, He Joined the group in 1964, became a director in 1985, and was made chairman of Sedgwick Broking Services on its formation last

Mr W.W. Burrows has left. the TCC Group (Swedish Telecom) to head CSI COMMUNICATION SYSTEMS INTERNATIONAL, air traffic control equipment, from today. He spearheaded the sale of International Aeradio (IAL) voice systems to Swedish Telecom in 1986 and was appointed chief executive of the newly-formed Tele Control Communications company. After a year he took over as director of marketing, and last year was promoted to group director of strategic planning.

LOGICA has appointed Mr Andrew Given to its main planning and finance. He joins from Plessey where he was group finance controller.

PANMURE GORDON MANAGEMENT, fund

managment subsidiary of Paumure Gordon Bankers, has appointed Mr Martin Gordon appointed for Martin Gordon (above) as director, business development and client liaison; and Mr Reith Yarwood as fund manager. Mr Gordon joins from Kleinwort Benson, and Mr Yarwood from Legal & General.

LEGAL COLUMN

Profession still bashful about the business of making money

By Robert Rice, Legal Correspondent

EVEN THOUGH law is becoming increasingly "big business" all over the globe it is perhaps a measure of how far law firms still have to go in raising their profile that two unconnected events for the UK profession were allowed to pass virtually unnoticed last week.

There is no easy answer as to what these events were

to why these events were largely ignored by the media. What the particular law firms involved were prepared to say was not very revealing.

Until the profession (or business as it ought now to be

called) learns to be more open about what it is doing and how it makes its money things are unlikely to change markedly. Talking about money, in particular, poses a peculiar prob-lem for UK lawyers.

That is because however much some of them might like to to tell the world how well they are doing by publishing, for example, gross fee incomes, fees and costs are regarded very much as a matter of confi-dentiality between solicitor and cheni

That difficulty was much in evidence in the first of last week's events - the announce-ment by British Coal that it is to privatise its legal services by merging its legal depart-ment with commercial solici-

tors Naberro Nathanson. The announcement was picked up by some sections of the press, but largely from the angle of British Coal. Of the other partner in the deal very little was heard.

because although Nabarro Nathanson offered information about its size, the range of work it does and how the deal would give it an enhanced capacity in environmental and mining law, it was not prepared to say anything about what people really wanted to

They wanted to know what the deal was worth. Was the firm going to provide legal ser-vices to British Coal at a subsidised rate? If so, for how long, and what did it mean in terms of the firm's overall revenues? To be fair to Nabarros, British Coal wouldn't talk about such things either, except in terms of the volume of work its

dling in various areas such as personal injury claims, prop-erty transactions and public inquiries etc.

speculation.

British Coal's legal department has no formal charging structure. Generally it provides services to the corporation and its subsidiaries on a no-charge basis except that time records are kept. Work done for British Coal Pension Funds is charged up on a shared cost basis with-

All that is left, therefore, is

out a profit element. Ignoring overheads and after harding up the pension funds' work the net cost of running the legal department is put at about \$3m a year. Best estimates within the corporation

Estimates within the corporation are that in the private sector this work would cost. between three and five times as much

are that to have this work done in the private sector would cost between three and five times as much.

In theory therefore the deal could have been worth up to £15m a year to Naharros. But, as both sides admitted, that part of the deal had been the reposition of the leaf. negotiation of fee levels for the various categories of the corpo-ration's legal work. It is almost certain that the deal is worth something less than £15m. The question is how much less?

Mr Jeffrey Greenwood, the firm's senior partner, after much persuading, was prepared to say that the deal would lead to an increase in the firm's gross fee income of somewhere between 10 per cent and 20 per cent. In an article on the City's

law firms last September The Economist estimated Nabarros gross fee income at between

However, the firm dismissed that as inaccurate. A more accurate guide is probably pro-vided by the role of thumb that a solicitor needs to bring in roughly three times salary or drawings to make a living - a third for the firm, a third for overbeads and a third for him

or herself.

If therefore we say Nabarros before the deal had 70 partners earning on average £120,000, 120 assistant solicitors earning on average £45,000 and 115 on average £45,000 and £15 other fee earners made up roughly of 60 articled clerks earning on average £15,000 and 55 para legals and foreign lawyers earning on average £30,000 we arrive at a total earnings bill of about £16.3m.

If that is multiplied by three according to the rule of thumb the gross fee income of Nabarro Nathanson would be

Nabarro Nathanson would be around £49m. To be on the safe side if we say it is somewhere between £45m and £50m, then the British Coal deal must be worth somewhere between

somewhere between first indicate the country of the first indicate the

That ought to have been a significant announcement. The group of seven law firms will have 261 partners, 548 assistant solicitors, 176 articled clerks solicitors, 176 articled clerks and 119 para legals making it the largest legal organisation in the UK with a total of 1,104 fee earners. Compare that with the UK's largest single law firm Clifford Chance with 255 fee earners comprising 195 partners, 577 assistant solicitors, 206 articled clerks and 7 para legals.

Sir Patrick Lawrence, semior partner of Wragge & Co. the

partner of Wragge & Co, the Birmingham member of the group, described the deal as having "all the benefits of a merger with none of the obvi-ous disadvantages."

It is not immediately obvious that the group has any of the benefits of merger let alone all of them. There seems little point for example in making a big issue of the size of the group if the constituent mem-bers intend to continue to practise in separate independent

The group does not therefore have the benefit of size that a merger would bring. . . Again, M5 has been around for 10 years. Yet if you were to ask the average businessman

"what is M5?" it is a fair bet he would say it was a motorway. It is arguable that another benefit a merger would have offered the group is a signifi-

cantly higher national profile. That is not to say that there are no benefits in the group arrangement. Clearly the mem-ber firms have benefited from pooling their resources in the recruitment and training of

There is the potential advan-tage of knowing each other suf-ficiently well and having the initial structures in place to be initial structures in place to he initial structures in place to be the need should arise to combat the growth of national multi-disciplinary partnerships led, for example, by large

accountancy firms.
For the existing provincial members there is the clear advantage of being associated with one of the UK's top 10 commercial law firms.

But what is in it for Norton Rose's Mr Tony Kay, Norton Rose's managing partner, says they will be able to attract a greater number of the better lawyers to work for them. For certain clients, he adds, it will be a great advantage to have more than one firm working for them both on a general basis and on particular prob-lems. Perhaps!

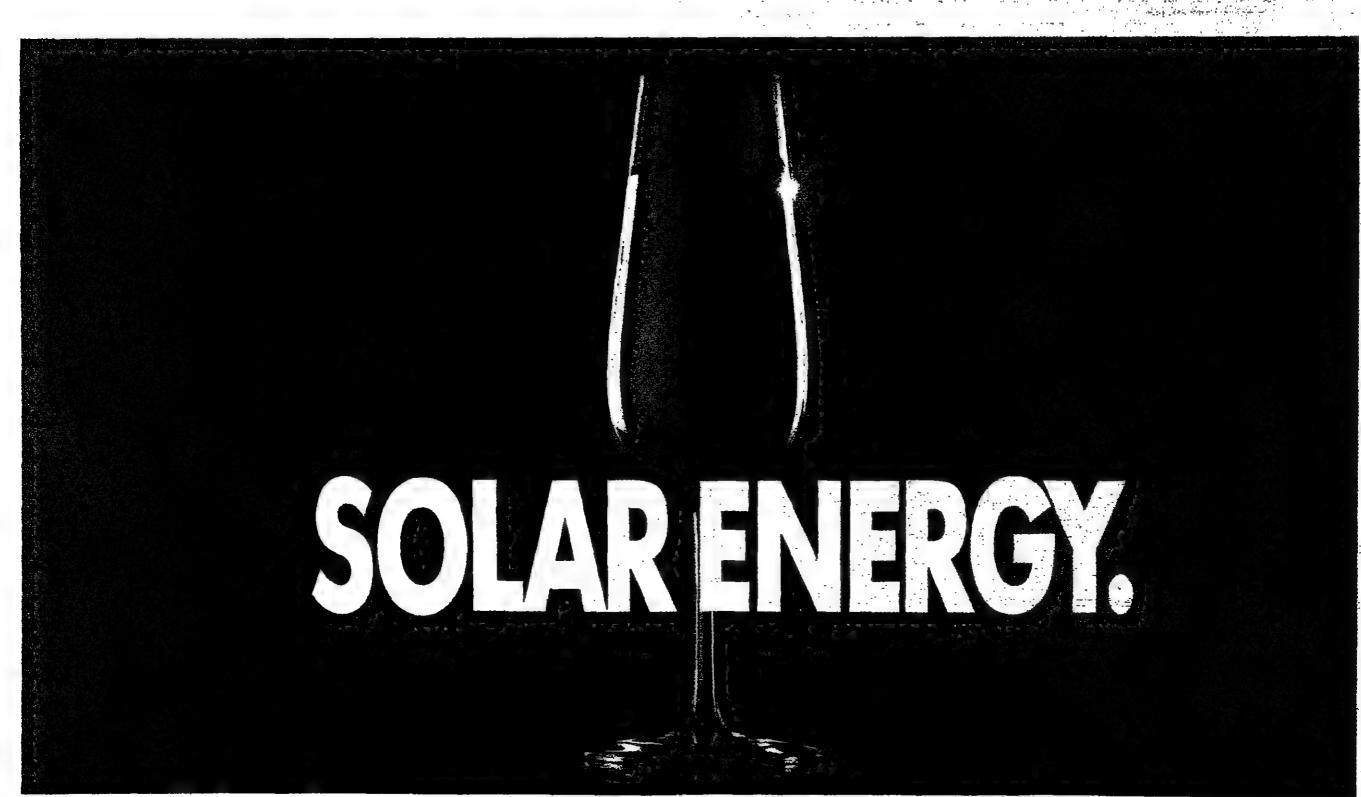

If there are any obvious advantages in the deal they come in the international context. The group is uniquely placed within the UK to give comprehensive on-the-spot advice to foreign inward direct

For the existing members of the group there is also the immediate advantage of access to Norton Rose's overseas offices in Hong Kong, Singapore and Bahrain and the office to be opened in Brussels in May.

The Brussels office in particular will give the group's exist-ing members a toehold in Europe they might not other wise have had in the immedinto future.

4

-For Norton Rose the extra work that group members will generate for its Brussels office may make all the difference between being there for the sake of being seen to be there and being there for sound com-

Efficient and professional but warm and hospitable. That's how we think business

ir Hector Laing, chairman of Joint ventures united Biscuits, has long held a dream that everyone in China should be able to buy a McVitie's digestive biscuit. In more practical terms, he told his executives in the early 1980s that China was "one of the world's unexploited markets and we ought to be there."

Many companies have shared such ambitions and have seen their ideas thwarted by China's politics, bureaucracy or economic setbacks. On Wednesday, however, just before he retires. Sir Hector should begin to realise his drawn to the companies of realise his dream; he is due formally to open a joint venture biscuit factory. at Shekou in the south China special economic zone of Shenzhen, one hour's hovercraft ride from Hong

Kong.

The opening marks an unusual success story in the management of joint ventures in China, although Sir Hector will find levels of efficiency, hygiene, and cleanliness that he would not normally accept. "It's a problem of the work ethic. The people are very cavalier about hygiene, cleanliness and quality control," says Chris Strachan, managing director of UB Far East.

Strachan explains that the quality, is basically up to company norms— though it will take two years or more for the joint venture to be sure of full UB standards of efficiency. The prob-lems are, however, the price that UB is willing to pay for establishing the factory in a record 16 months from signing the agreement to the start of production last September. Special factors dictate why this project, built on land reclaimed from

Frack

A

*

oyster beds, can be rated a success story at a time when good industrial news, in China is hard to come by. First, UB's partners are an energetic. Hong Kong trader with good connections, and a Chinese fishing village called Hai Wan recently made cashwich by industrial development.

rich by industrial development.
Second, UB has avoided common. foreign exchange and export quota. problems by acquiring an instant cus-tomer base in Hong Kong where it has bought out the Mar biscuit making family with 18 per cent of the colony's market. It has moved produc-tion of Mar's savoury Pacific brands to the new Shekou factory. This is now meeting China's export quotas with Pacific sales back to Hong Kong which also provides it with ample for eign exchange to pay for imported raw materials.

The Mar family, who are Chinese, have been bakers for generations, first in China, and then in Hong Kong to where they emigrated 40 years ago. But, having sold their valuable old factory site for property development, the family is joining Hong Kong's \$5,000-plus a year brain drain well ahead of 1997 when China regains sovereignty, and are going to Canada and New Zealand where relatives are already prospering

The arrival of UB to take over and develop their business illustrates a trend which is developing shead of

old trading hongs. It also became associated with research on the feeding of rusks to improve Chinese children's deficient diets. In 1986 if linked up with ABV Baker of the UK in a £7m technology transfer agreement for Peking's Ministry of Commerce. APV is providing machinery and UB is providing technology and training for five rusk plants around the country. After years of tortuous haseles, the first two plants are now being commissioned in Shannyi and Jianesu

commissioned in Shazaxi and Jiangsu

provinces.
In 1996 UB opened a Hang Kong
office to spearhead expansion in Asia,
especially China, but also including a
soon to be expanded joint venture in

the Philippines. By 1987 talks had started with two existing biscuit-mak-ing companies in Guangdong, the

province adjacent to Hong Kong that includes Shekou. Both carried what some managers call the "historical

beggage" of low quality and hyglene standards, poor work ethics and

excessive over-manning with labour forces three times as large as UB

Talks, and plans for test production runs, were not successful and the ideas lapsed.

Then UB found Terence Yu, a Hong

Kong entrepreneur whose family came from Shanghai in 1950. Previ-

ously a marketing manager with the Swire group, Yn had started trading in chemicals with China when its

open door policy started in 1979 and later began joint ventures in Shekou. Now his Advanced Chemicals com-

pany has brought undreamed of wealth to the 200 previously poor fish-ing families of Hai Wan village where,

alongside the UB site, he has an older

UB realises a dream by biting at bureaucracy

John Elliott explains how the UK biscuit maker set up a Chinese operation

UB's Shekhou factory will take two years to achieve full efficiency

factory employing 1,450 people in three shifts. Some produce traditional detergents for China. Others assemble audio and video cassettes for Swire Magnetics in an operation which is typical of countless ventures in Guangdong where Hong Kong and other companies use cheap Chinese labour and land in processing

Hai Wan lies on the edge of the Shekou industrial area developed within the Shenzhen special economic zone as a private sector venture by Peking-controlled, Hong Kong-based, China Merchants. It is considerably better serviced than most other joint venture locations in China. "Every-thing works here in Shekou – the water, electricity, banking and the port," says Strachan.

In June 1988, UB signed a 30-year joint venture agreement (with renewal rights), taking a 60 per cent stake. Yu's Advanced Chemicals has 30 per cent and Hai Wan village 10 per cent. The capital cost was limited to \$10m (including housing for 300 employees in small flats) to avoid having to go to Peking for lengthy approvals.

Local authority clearances were obtained in six weeks and the building structure was completed on newly reclaimed, piled land by last June which meant the project was far too far advanced to be stopped by any UB worries following that month's Tiananmen Square crisis in Peking. Plant included a new 60-metre long APV oven, and second-hand equipment

from UB in the UK and Pacific in

Hong Kong.
Speed was the primary target and, in order to keep the project moving. UB accepted various unnecessary and frustrating local requirements. These included installing dirt and fly-attracting windows, some glazed tiling, and false ceilings in a creaming room that attract insects, all of which UB considered to be unhygienic. It was also not allowed to store packing cases alongside packing lines, and had to create an unnecessary special "germ free" room. "We felt we would never have won these arguments, so it was sensible to give way," says

All the partners, including the village, put up funds in Hong Kong dol-lars which circulate openly in the area. Grey-market swap shops were used by Yu to turn them into China's Renminbi currency at favourable rates for local purchases.

China requires that at least half the factory's production should be exported, though this can drop pro-portionately with increased use of local raw materials. About 60 per cent (by value) of raw materials are now being imported, including all edible oils, because of poor local quality. The import target for three years' time is 15 per cent, if adequate edible oil becomes available in China.

At present 60-70 per cent of produc tion of approaching 100 tonnes a week is needed for Hong Kong under Pacific's label, which UB intends to maintain. Sales in China, starting

with Pacific crackers and other savoury biscuits, will begin under UB's McVitie label within the next few weeks. UB has already been softening up potential Chinese customers with 20 per cent price subsidies and last year sold 30,000 24-pack cases of biscuits, mostly digestives, 80 per cent of them to the province of Guangdong around Shekou and Shenzhen.

A second production line next year will double output to 12,000 tonnes annually, including 3,500 tonnes to Hong Kong and some exports to South East Asia and possibly other centres like San Francisco and Vancouver where there are big Chinese communities. Next year, McVitie's own soft dough brands, such as shortbread biscuits, will also probably be started, and there are also plans to produce snack foods such as potato crisps and extruded corn snacks using UB's KP technology in a factory

extension on an adjacent plot.

The target is to break even by the end of this year and then by 1994 to achieve 3 to 4 per cent of China's biscuit market, which was estimated by consultants three years ago to be

500,000 tonnes annually. China's current economic problems have brought down biscuit prices by about 15 per cent in the past six months and have also led to a scarcity of working capital because local banks have little or no money. This has compounded problems caused by the absence of any established system for raising working capital. The flow of Hong Kong dollars from Pacific sales has, however, provided the necessary funds through Bank of China

The country's political upheavals have also made some officials less willing to help solve problems. Longer term, UB believes it should escape slumps in demand faced by other consumer industries because biscuits are a basic food in China.

"We also have a good insurance with the Pacific brand sales to Hong Kong, because if the Chinese economy collapsed, we could still just about survive for a time in Shekou with a self-sufficient operation by cutting costs and selling to Hong Kong and other export markets," says Strachan. The main current problem remains the achievement of UB standards of

efficiency, hygiene and quality, even though the factory is already well above other Chinese biscuit plants where rats are sometime seen in production areas. That day-to-day prob lem has been handed to Eddie Howarth, an engineer who installed the machinery and is now the consultant in charge of production. He has replaced a steady stream of UB experts and advisers from Britain who caused confusion by giving the workers conflicting messages.
What is his worst problem? "The

people here feel they must be seen to be running the machine and doing things. Every time the shift changes the men come on and start fiddling with the control nobs on the ovens and that upsets standards."

An example must be set from the top

Christina Lamb reports on coaching

the UK training video company formed by four men including comedian John Cleese in 1972. and recently bought out by its

management for around £50m. The new video. "The Helping Hand", challenges the concept of management as hierarchical and authoritarian. Instead, it suggests that the manager's role is that of a co-ordinator. looking to the future and aiming to get the best from his

Just as tennis coaches work on two levels - performing the task and developing others confidence to perform well -the idea of coaching in business is that when subordinates are given hands-on experience and encouragement in new responsibilities, they acquire new abilities; the gaps in their performance are bridged with-out disrupting the handling of the department's tasks affecting its targets. As staff become more competent, the manager is freed to do more

In The Helping Hand, Geoffrey, the hapless manager, is resistant to change. He argues that if the coaching works, "People will say, Look at that useless prat. He's not absolutely invaluable. His department runs without him!" An avergrated Cleese in the role exasperated Cleese, in the role of presenter guiding the man-ager, grabs him by the collar and screams: "But that's the greatest compliment they can pay you as a manager. Anybody clever enough to build a machine that runs itself is to be envied!"

Persuading a manager why he should coach is the hardest obstacle. Geoffrey's protests touch a raw nerve when he argues that his own position could be threatened if responsibility and accountability is pushed further down the hier-

archy. Cleese, in his real life role as a successful businessman, says: "Unfortunately, in the UK when companies make cuts the first thing to go is training. On-the-job coaching to encourage staff development is thus vital. It is a short-term investment for a long-term gain."

The second part of the video deals with methods of coach-

trangling is not usually part of staff training. It is, however, included in the latest film by Video Arts. the tennis player who sets himself the challenge of improving his serve through the specific goal of getting two thirds of his serves in by the end of the

Geoffrey, having overcome his reluctance to train, spoils it all with his spoon-feeding approach; he ends up by saying. "Don't worry, I'll have to do it properly later, anyway." Finally, though, persuaded

to adopt a questioning approach and to "listen actively...as an act of generos-ity." he allows the woman he is coaching to learn through her own mistakes. Geoffrey finds she comes up with new ideas.
But middle managers cannot

adopt a new approach which initially may delay tasks without approval from superiors. And Cleese admits a problem with his videos is that the films are always ordered by one level of management for those below and that The Helping Hand needs to reach the top really to hit home.

Pragmatic

Cleese maintains that there "is far too much of people at the top passing down informa-tion to people with no explana-tion. It is up to the pragmatic world of business, which has lost out to more individualistic European competitors, to seize on an idea which is going to work and show the way for-

Cloese suggests that "if we can get someone to laugh at a bit of bad management then the chance is it will flash into their mind - 'hang on, I do

Video Arts is now hoping to spread its message in Eastern Europe. It has just entered into a joint venture in Yugoslavia and has recently given a presentation to the Soviet Govern-

It has not, though, yet overcome the problem of obtaining hard currency, instead being offered barter goods. Even a man of Cleese's imagination is hard put to suggest a use for 200 tons of marble powder or a sackload of silk sutures. "The Helping Hand" is available at £735 from VideoArts, 68 Oxford Street, London W1.

CONFERENCES

Current Issues in Information Management for the 1990s

An important international conference for senior executives, sponsored by The Conference Board Europe.

May 22-23, 1990 InterContinental Hotel • Paris, France

Engineering & Construction

US orders for Bovis company

The Bovis Construction Group's US subsidiary LEH-RER MCGOVERN BOVIS has been awarded management contracts on 21 projects worth US\$427m (£260m). LMB companies have also secured consul-tancy fees of \$423,000 (£259,509) on a further 11 projects around

In Florida, LMB has been selected as pre-construction manager for Disney's Boardwalk Entertainments Centre, a retail and leisure development covering 44 acres. It includes 75 small stores, two night clubs, four restaurants, a roller coaster and a ferris wheel,

At JFK airport, New York, LMB will manage the construc-tion of Japan Airlines' new facilities which combines renovation of the company's hanger and new building work.The fast-track pro-gramme will be in completed

in September 1992. In California, the company is to manage the building of Jungleland, a mixed use multi-me-dia building development on a 24 acre site for City of a Thousand Oaks.

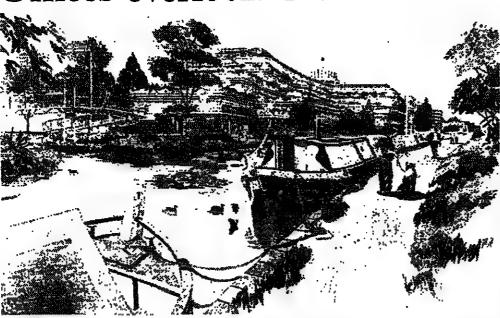

LMB is involved in a joint venture in Houston with Turner Collie & Braden to renovate 41 school sites including additions to schools at eight

In Cleveland, Ohio, Target, LMB's specialist interiors and shopfitting contractor, is to complete a refurbishment of the Brooks Brothers store, which is owned by Marks &

BULLOCK CONSTRUCTION, a Lovell Group company, has been awarded contracts worth £7.9m. The orders cover a wide range of work at ICI's Cheshire sites at Alderley Park and Mac-clesfield, at Huddersfield, Yorkshire, and at Blackley, Manchester. ICI will be responsible for the project management, design and mechanical & angineering services.

CONSTRUCTION CONTRACTS

Offices overlook Grand Union

LOVELL CONSTRUCTION has been awarded two contracts worth more than £23m. At Uxbridge the company is to build a four-storey office block (pictured) with split-level basement at The Quays, under a contract worth £12.6m. The developers are the Burton Property Trust and the site is next to the Grand Union Canal. The building will provide 105,000 sq ft of air-conditioned accommodation. The company also has a contract worth over £11m to build an office and residential development for Canal Belatate. Situated in Landack Param Land the major adding Param Land Canal Great Portland Estates. Situated in London's Drury Lane, the project adjoins Drury Lane Gardens and is within the Covent Garden conservation area. Designed to meet the new thermal regulations, the scheme will provide 40,000 sq ft offices in five storeys, and 22 flats in a six-storey block.

£36m orders won by Tilbury Group

contracts worth nearly £36m. Tilbury Construction orders include 55 flats for Plymouth City Council (£2.56m), high technology offices at Salford Quay, Manchester (£2.03m), a primary school at Tower Ham-lets (£1.84m), improvements to pre-war flats at Lambeth (£1.56m) and a superbowl lessure complex at Aintree, Liverpool (£1.13m).

The civils division orders include a bridge for British Rail at Leytonstone (£2m), refurbishment and additional maintenance sheds for British Rail at Slade Green (£2.32m), Avebury Boulevard at Milton Keynes (£1.42m) and remedial at Windsor Wharf (2786,000).

U.K.C. has secured £7.25m orders, including £4.5m for the extension to the "THORP" proj-ect at Sellafield, Cumbria, for British Nuclear Fuels and £1.25m contracts from BP Chemicals in Saltend Humberside and Bagian Bay.

Westpile has secured £4.76m business. This includes con-

Docklands Light Railway; Sir Alfred McAlpine; Shell UK; CCL Developments in Cardiff: Charter Group Properties; and

Westpile (Malaysia) has secured a £1.2m contract to supply concrete piles for the ICI plant in Kemaman, Malay-

Whittle has secured 21.4m contracts. The largest (£721,000) is for fitting out eight cars for the Royal Scotsman - a luxury touring train. Two further contracts in the Republic of Ireland are worth £162,000.

Rebuilding shops in Princes Street

Work on rebuilding a fire damaged property in one of the world's most famous streets is included in contracts worth about £8m awarded to TAR-MAC CONSTRUCTION.

The company has a £1.7m contract for a project in Princes Street, Edinburgh, which involves demolishing a building but retaining its sand-

stone facade.
Behind the facade there will

be a new five-storey building, including a basement, and incorporating two shops.

Work on the project, for the Confederation Life Insurance

Company, is due for comple-tion in about a year. Tarmac Refurb, the refurbishment specialist company, has a fl.lm contract for demoli-

tion work and designing. extending and refurbishing a factory in Aston, Birmingham,

for Fazeley Developments. Projects awarded to the con-tract housing division include a 23.3m contract for moderninsing homes on the Prospect Estate, Farnborough, Hampshire, for Rushmoor Borough

The division also has a £385,000 contract for replacing windows in homes at Kings Norton for Birmingham City

ARCHITECTURE

Paddington redrawn

IN 1820 Paddington was an small isolated village around its green. There were a few large country houses in the neighbourhood, including Westbourne Place which had architectural occupiers in the form of Isaac Ware in the 18th century and Samuel Pepys Cockerell in the 19th. The area changed its country character radically as the 19th century proceeded and the Bishop of London's lands were developed with long stucco terraces and crescents and large communal gardens. The Paddington Canal was an early arrival in 1795 and a precursor of the area's later importance as a centre of

communications.
It was the arrival in 1832-8 of the Great Western Railway and its magnificent terminus designed by Isambard Kingdom Brunel that both gave the area a centre and brought it closer to the rest of central London. Somehow the area has always seemed much more of a place to depart from than a place to stay in and its strangely tran-sient character was not helped by the arrival of the Westway, which roars past the parish church of St Mary's and the tall backs of seedy terraces. Sir John Betjeman probably got it right as he charted the decline from Edwardian comfort in Bayswater and Paddington giv-ing way to an area, "now rack-rented into flats for busy refu-

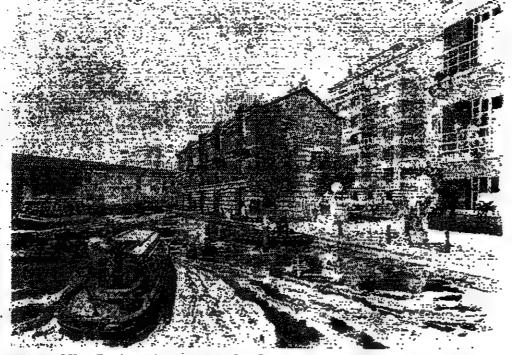

Now the area faces some of the most radical development proposals that are likely to affect the capital. Westminster City Council have the enor-mous responsibility to recon-cile the needs of the London. the wishes of the residents and the conflicting aims of a variety of developers. To date the City Council has declared the whole district a Special Policy Area with a project director

who has the unenviable task of attempting to bring harmony. Thes are five major develop-ment proposals within the special area. The first is for the Paddington Basin, which is a thirteen acre joint venture scheme between Trafalgar House Developments and the British Waterways Board. The planners and architects are Britain's largest architectural firm, Building Design Partner-

This is the only really mixed development that includes offices, shops, flats, an hotel and a minimal number of studio workshops. In architectural terms this seems to be the most coherent, and it has a strong focal point in the form of a shopping galleria at the Edgware Road end of the canal. There are two office towers of seven and 18 stories the taller looks ar present to be architecturally undistin-

The best element of the Pad-The best element of the Paddington Beain acheme is the opening up of the canal basin itself to the public. New bridges and paths will allow public access to an area that has been disused and lost for years. The developers do seem to be making every effort to ensure that a new waterside community can be developed on this currently wasted site. The second site is the former Paddington Goods Yard which

Paddington Goods Yard which covers some thirteen and a half acres of sunken wasteland between the Westway and the railway tracks. Grainhurst Properties are the developers (Regalian, NFC, and Higgs and Hill) and the architects are Sel-fert. This plan is for offices (some 1.7m square feet) and shops only. The developers call

The Building Design Partnership's development plans for Paddington Basin

their grandiose proposals Bish-opsbridge and it has been severely mauled by the Royal Fine Art Commission, quite rightly, for being too large for one architect to handle and for having buildings that are much too high.

much too mgn.

It would be very damaging if it was allowed to go ahead in its present form; architecturally it looks like an Mervyn Peake version of urban horror. The plan is for some 11 to 12,000 jobs to created by the new office development of this scheme. The movement of this large number of people is going to demand more than the pro-posed new underground sta-

The third plan is for the redevelopment of the St Mary's Hospital site. The Parkside District Health Authority wants to build a major new hospital which would be partly funded by the replacement of some existing hospital buildings by commercial developments. The architects for the new hospital are Liewlyn-Davies Weeks and for the commercial element.

YRM.
This sort of rationalisation of centrally located hospital land and buildings seems sensible, but is contentious: is this the way to fund urgently needed hospital improvements?

Other plans for the area include the replacement of the 1950's office block on Eastbourne Terrace by a post modern commercial development by the Halpern Partnership, by the Halpern Partnership, and a further addition to the Metropole Hotel by the Edg-ware Road by American archi-tects HOK International. The hotel is some 29 stories high and remarkably ugly and undistinguished.

The enormous changes planned for Paddington all need sensitive integration by the planning authority. West-minster is taking considerable trouble to ensure that the public is consulted and aware of the potential of the area as the centre of the proposed east-west cross London rail link and the much needed express

rail link from Paddington to

rail link from Paddington to Heathrow Airport. Inevitably Paddington is to be compared with proposals for Kings Cross and Broadgate, but it has several advantages in that the land is ready for redevelopment and the area needs the major lift that such proposals could offer.

The proposals are generated

The proposals are generated by concrete transport propos-als that are also much needed. the local authority is taking the right approach — guidance and emphasis on the need for integration of the variety of plans. The difficulty, it seems to me, comes with the quality of the architecture. There are no leading design firms involved in any of the schemes, and the general, overall design level is not high or original. It is only architectural quality that can redeem cities and these proposals for Paddington still have a long way to go.

The Last Days of Don Juan

Like Punch, Don Juan is the villain we hate to love, the id personified, the anarch who jovially demolishes the estab-lishment. Significantly he first saw life as the burlador of Sev-ille in Tirso de Molina's play: "burlador" means trickster. It also means joker and has connotations of prankishness. The besetting sin of Nick Dear's new version - which opens the RSC season - is the lack of mirthfulness.

The translation is modern and idiomatic, though colour-less when linguistic virtuosity is required. Attempts at local colour lead to bathos: "Men went on their knees to me -paraded me through patios" recalls Isleworth rather than Iberia. Above all it loses awe and fear, and strips the central character of his wickedness. Being dragged down to hell seems an excessive penalty for this compulsive and joyless con-man who would scarcely rate a mention in The Sun. Mr Dear has strengthened

the women's characters. There are four victims, condensed into the three of Mozart's opera, and all begin with varyopera, and all begin with vary-ing degrees of spunk, integrity and self-respect. Fisherwoman Tisbea revels in her inepend-ence, her own little home; the peasant Aminta (like her oper-atic descendant Zerlina) chaffes at the status of registal chaffes at the status of marital chattel; the two aristocrats leave the adapter uneasy — a sign of the times — but throw up a hol-low-eyed and near mad Anna, done with dishevelled relish by

Yolanda Vasquez.
Triumhantly, we also have a female servant for the Don. The cook Catalina is a contrast rather than the low-life counterpart to the hero that we usually see, leaving room for both disapproving comment and a certain tenderness. She strides around in breeches, greasy, rough-voiced, enunciating sense and scruple "let all the men in the world be brave; Colin Amery where conscience is concerned Catalina is a coward." Only

Suffering: Linus Roache as Don Juan

economics keep her in servi-tude. Lacking Vanessa Red-grave, born to play the part, the RSC casts the wonderful Sally Dexter, a protean actress who in each new role never puts a foot wrong.
Designer Kandis Cook's waf-

fle criss-crossed wall is smeared with red tongues (blood or flames?), and opens to reveal bare brick, a promis-ing arena for Danny Boyle's not yet fulfilled production. Linus Roache has given beautiful performances at the RSC, but he seems puzzled by the rather blank Don Juan. Irony glints through a mocking tirade on honour of fleetingly Falstaffian scepticism, but he exists mainly as an element in the feminist argument: that

women are "bartered like live-stock", as political as interna-tional diplomacy.

Robust supporting performances bode well for the new season's company. Paterson Joseph's foppish dupe (the court gossip with Juan smacks of Coward, or at least *High*

Society) is almost sacrificed to the absurd code of ale friend-ship — what would E.M. Fors-ter have said to this satire? George Anton brings the lilt of the Isles to peasant jealousy over his Belfast-accented Aminta. Sulvester Morand is a Aminta. Sylvester Morand is a finely immobile statue who could be frightening if neces-sary. But this is not that sort

Romeo and Juliet

HULL TRUCK, HULL

Not many actors make their stage debut playing Romeo, but then Roland Gift is not an actor. He is the lead singer with Fine Young Cannibals, an umusual pop group in that it enjoys both critical and popu-

He conveys a charismatic melancholy which enabled him to steal the movie Sammy & Rosie Get Laid while hardly opening his mouth. He comes from Hull and his

pop career was once managed by the Hull Truck's administrator so Gift has nobly given the next five months to tour in Romeo and Juliet.

Unfortunately you cannot merely pose your way through Romeo - there are some of the most poetic speeches in English drama to get over. By the opening night Gift had just about learned the lines by rote. No doubt over the next few weeks he will be able to loosen up enough to attempt some

Not that it will be necessary in Bill Homewood's production. Whoever put about the report that young Romeo was "virtuous and well governed" must have been inhabiting a differrent Verona.

The play starts with the actors invading the front rows and pulling to pieces the rather noble opening prologue. After that the young Veronans act it up like lager louts on a cross-channel ferry. They even chant "Ro-me-o" to the best of "here we go, here we go."

Roland Giff as Romeo with his Juliet, Daphne Nayar

horesplay is quickly grasped and poor Mercutio (a febrile Paul Brennen) can hardly get out a sentence without some

priante horseplay.

Words like "goose" and "prick" and "cheeks" are obvious candidates for bawdy behaviour, but even in the balconv scene Romeo's line "Sleep dwell upon thine eyes, peace on thy breast" is not allowed to pass without the lovers baring their chests at each other. Gift is almost an island of calm amid all this mayhem.

The actors have been basically who can raillowed to raid the props basket for costumes - disco ence winning easily.

Any opportunity for sexual casual for the youths, a night dress for Juliet, Vogue for the adults — and the scenery is a group of building bricks shifted around as need be.

Daphne Nayar, an American newcomer, manages both a character — she plays Juliet as a young fanciful girl making a game of it all — and finds some beauty in the verse. Claire Benedict as the Nurse and Miles Richardson as Paris (when doubling up as Benvolio be is either vomiting, urnating or staggering) further their careers but for the rest it is basically who can rant best, with Colin Kaye as Friar Lawr

This Hull Truck production visits London, New York and elsewhere before ending up at the Edinburgh Festival Roland Gift's undoubted physical mag-netism is currently burning low as he gets to grips with his

If he can relax; if the company can turn down the frenzy; some of the low comedy can be trimmed from an excessively long evening, then this Romeo & Juliet has enough panache to make converts of some of the young girls who will be drawn by Gift to the theatre for the first time.

Les Negresses Vertes

TOWN & COUNTRY CLUB

They may not be black, green or female, but they are very French. And Les Negresses Vertes are the most original rock hand to have come out of

rock band to have come out of that country for a long time.

The gulleless little accordion walts that reeks of Gauloises, dimly lit cafés and opens their show is as seductive as it is totally misleading; nothing else in the evening is going to be so quiet or persuasively evocative.

Imagine if you can some

Imagine, if you can, some weird and wonderful hybrid of The Pogues and the Gypsy Kings, an eleven-piece outfit with raucous accordion, trumpet and trombone whose musi- freestyle exuberance is har-

- back to the French chansonniers and the Fifties rockers and through to punk but with more than a smattering of Fla-menco rhythms and Algerian

cal roots stretch all directions

It might be zee French rock as described by the lead singer Helno (a kind of Gallic Shane MacGowan) but the result really does defy classification. Helno is the group's pivot, the centre of manic sparsy.

its centre of manic energy. Mad, bad and dangerous to watch from the front row, he maintains a constant bilingual banter as he goads his troupe into ever wilder realms. That

nessed to a fierce rhythmic drive and lyrics that probably lose quite a bit in their transla-I fancy that a crash course in

French slang would add a whole new dimension to some of these songs but the surreal Zobi La Mouche - "Oui c'est moi la mouche/Je suis pas tant crédible/Car on me trouve iouche" – and the perils of vegetarianism chronicled in La faim des haricots come over

clearly enough.

Last week's sold-out appearances at the Town and Country concentrated on the songs ity. from the Negresses' first album

ago. Where they go now, though, seems hard to predict. Light and shade are not part of their scheme of things; 90 minutes of scarcely controlled mania is enough for most peo-

But part of the charm (if that is an appropriate word) of Les Negresses Vertes is their self-indulgence; the show may be a smoothly geared product but its constituents are fresh and quirky - they're out to have a good time, and might even have surprised themselves with their popular-

Andrew Clements

State of Mind

With its plinth, its pillars and its position down several furlongs of ramp in the bowels of Covent Garden's Theatre Museum, this theatre, for all the cachét of its address, is about as uninspiring as they come, forcing the hapless performer to maintain the illusion of playing to three sides when the lecture-room ambience and treacherous sight lines herd the audience to the front.

It poses no difficulties for the energetic Yorkshire Theatre Company, a young Leeds-based touring group who have doubt-less encountered worse on their travels. Unencumbered but for some soapboxes and a scattering of caps and specs. they carry their craft on their backs, unloading it item by item in an exuberant display of physical scene-setting. State of Mind is, roughly speaking, a portrait of contemporary youth culture, media-led, fiction-obsessed, which follows two likely lads from pre-adolescent preoccupations with science fiction and Jimmy Savile through the agonies of the disco hall and school reports to the adult redundancy their parents always feared lay ahead.

sharp pastiche, some of which - like the fantasy interviews in the styles of teen-mags Smash Hits and Just Seventeen could only be fully appreciated by a teenage audience.
 The cast of three - Caroline Burghard, Hartley himself and the lanky Christopher Halliday

 are a likable bunch who work neatly together, performing with a rapport and a bounce, under Toby Swift's direction, that keep the laughs

Ian Hartley's script is not particularly profound or searching, but it is thickly packed with shards of needle-Hitchcock (this last, one of the

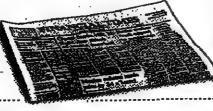

show's high spots). It is a piece that leaves one not moved but amused — and convinced once again of the theatre's ability to speak the language of the television generation while remaining innately and irrepressibly the atrical. The importance of this sort of bridge-building cannot be too highly stressed.

Louis Lortie

Since this French-Canadian pianist has established himself as a selflessly brilliant exponent of the French repertoire, his prowess in Debussy and in Stravinsky's Petrushka transcriptions on Saturday - daz-zling to hear - was no sur-

absence of surprise throughout the Italian book of Liszt's Années de pélerinage or to put it another way, the discovery that Lortie just is not a very interesting Liszt planist. Expert, certainly, and scru-

What was surprising was the

pulous, and a model of good taste: but he proved conclusively that these virtues are insufficient.

The earlier pieces in the book are mild stuff (II penseroso can seem more than that, but it did not here), and they need the touches of fantasy and enlivening imagination which Lortie was too polite to supply. His careful, musicianly rendering of the Petrarch Sonnets was pallid in comparison with what any number of other pianists can find in them.

Even the Dante Sonata, executed with much bravura, sounded dramatically non-committal: the tortured chromatic theme merely a first subject, the rapturous central surge just a well-graded crescendo.
Of the early Debussy he chose, the overlong Masques

needed more than his digital

bow. It is a fitfully effective piece, often lying awkwardly under the hands - as Ravel observed, it suggests a transcription from an orchestral Lortie explored it with superb confidence, bringing all his variety of touch and colour into play, with glinting bursts of sea-spray at the edges. It was a rescue so successful that

polish to keep it going. With L'Isle joyeuse, however, the real Lortie at last made his

it made one forget that the piece ever seemed to need res-Having hit his stride with such éclat, Lortie proceeded to dispatch Stravinsky's fearsomely difficult Petrushka extracts with insouciant glee. (He seems to have a special fondness for transcriptions.) If his Shrovetide Fair episode was a degree less exuberant than Mikhail Rudy's, a couple of months back, it was even better controlled - Lortie's

strict loyalty to rhythmic pulse is a notable mark of his style. He displayed a broad canvas in bright hues, charged with witty detail, and he treated the scene in Petrushka's cell with incisive subtlety, eliciting the undisguised pathos which had been missing from his Liszt: an immensely satisfying perfor-

When alliance ends in anger

THE SPECTACLE of General Electric of the US suing Daimler Benz of West Germany for damages of \$1.15bn (£700m) for allegedly breaking collaboration agreements will provide a salutary shock to the many companies rushing to take part in the world-wide fashion for "strategic alliances." If GE, one of the world's most experi-enced practitioners of corporate collaboration for three decades, can get caught by the sudden defection of an ally, other companies will ask them-selves how they can avoid fall-

ing into a similar trap.

The dispute will also undermine the widespread notion that the most risky alliances are those with Far Eastern partners. And it will raise to new prominence the question of whether collaboration between global giants requires a global competition policy.

The fashion for alliances of various kinds has gathered seemingly unstoppable momentum since the mid-1980s, in almost every industry. From cars to consumer electronics. computers to aerospace, a dense network of alliances is now spreading across the globe. They cover, in different combinations, the exchange of technology, product designs, components, production, mar-kets, and management skills frequently between equals and increasingly between competi-

In the motor industry and in aero engines, the territory of the GE-Daimler dispute, most such "competitive collaboration" involves the pooling of specific activities, with rivalry continuing outside the area of agreement.

Varied motives

The motives for the international rush to collaborate vary between industries and from case to case. But three factors are common to most of them: the globalisation of competition, which prompts partners in Europe, the US, and the Far East to team up with each other: the rising risk of devel-oping costly new technologies and products, which forces them to share it; and sheer fear that if companies do not act quickly, all the partners on the dance floor will be taken. Such alliances are far from risk-free. With a few notable

After the poll tax

THE POLL tax has been resoundingly rejected. The British people have shown their distaste for it in demonstrations, rumblings on the Government benches in Parliament and resignations from the Conservative Party. The Government in general and the Prime Minister in particular are more than usually unpopular for this stage of the elec-toral cycle. There are several reasons for this, but the community charge stands out as the most immediately significant. Nothing that has been said or done about it suggests that it will become more acceptable with the passage of

unworkable solution to a genuine problem. British local government is unrepresentative. undemocratic and inefficient This largely reflects the fact merely juridically but psychologically a unitary state. This has three important consequences: first, people vote on the basis of national politics and pay little attention to local issues: second, local authorities are in many areas no more than agents for central government; third, because the inequalities in local spending that would follow from local fiscal autonomy are politically unacceptable, central government has consistently provided a huge proportion of local authority resources. Local authorities have spending power, but limited accountability. It is no surprise, therefore, that central government has always been heavily involved in both local government finance and local government

Accountability factor

The community charge was designed to solve these problems by providing a highlygeared element of accountability: three-quarters of local revenues are set by the Govern-ment, and the other quarter is paid directly by every inhabit-

In fact the blame for the tax has fallen on the Prime Minister, as the perceived force behind its introduction. There is no sign, as yet, that local electorates are voting according to which local candidates or parties promise to be the exceptions, such as — until a fortnight ago — GE's 30-year deal with Motoren-und-Turbinen-Union, part of the Daimler-Benz group, most of them are inherently temporary from the very start.

Limited goals

Research studies suggest that about 40 per cent of joint ventures and other collabora tive arrangements last for less than four years. These early terminations are not necessar ily failures: some alliances may have achieved their limited goals, while others end in take over. But many are decidedly divorce-like, such as the 1986 collapse of GE's aero engine partnership with Rolls Royce, when the latter decided to go its own way; it has subsequently linked with two Japanese companies.

Whatever the legal rights and wrongs in the GE-Daimler case, it is understandable that the American company is angry at MTU's defection to GE's main rival, Pratt & Whitney, part of the United Tech-nologies conglomerate. Even if Daimler returned all GE's proprietary information, as demanded in the lawsuit, MTU and Pratt could still use much of the knowledge to build a competing engine.

Whatever the eventual settlement of the dispute, it will force countless companies to think much harder in future about how to safeguard as much proprietary information as possible from their partners and, indeed, about whether to enter an alliance at all.

That might be all to the

good. The alliance flood has reached such a pitch that in certain industries it could start to restrict competition. The argument that ever larger scale is necessary for corporate survival may appeal to the cor-porate mind, and have some force in high technology industries with daunting develop-ment costs. But the steady carving-up of industries across the globe, by alliances between giants which are also acquisi-tion-hungry, reinforces the case for some sort of collaborative US-European Community

competition policy.
When the dust settles, Daimler may find it has unleashed more than just an expensive

most parsimonious with local budgets.
The Government is now attempting to offset the electoral disaster threatened by the poll tax, partly by using central funds to mitigate its worst effects and partly by "capping" some authorities and thus, in the process, denying the logic of accountability. This is the option it is likely to stick with, perhaps for fear of the consequences of admitting that it has made an enormous mistake. It would be better to withdraw the poll tax and bring back the rates. This would not work unless the uniform business rate, which has much to recommend it, was also withdrawn. This reversion The reason is that it is an would be a pity, but it cannot

> Genuine dilemmas The UK would then be back to a most unsatisfactory sys-tem, but at least one that is less unsatisfactory than the poll tax. The next step would be to spend the time necessary to reconsider the role of local government and local finance. There are genuine dilemmas, which need to be faced. A healthy local democracy, for example, may have to involve some inequality in resources available per head.

A proper examination of local government would involve answering the follow-ing questions: what are the proper functions of local government? How should local governments be elected (possi-bly by proportional representa-tion?) and how should the executive be structured - perhaps there should be directly elected mayors. Should coun-cillors be paid and how much? How many tiers of local gov-ernment should there be and what should each of them do? How should local taxation/ property charges/rates/ be arranged? What role should

central government play in determining local authority spending and taxation pat-terns? No British Government, of any political party, has addressed itself to this whole complex of related questions at once. Whatever Government next dares to challenge local autonomy should heed the lesson of the poll tax and think through all the questions before making a move.

rom its own point of view. Japan's choice of the European Community's anti-dumping policy as the target of its first complaint to the General Agree-ment on Tariffs and Trade could hardly have been better.

Not only has it won a resounding Not only has it won a resounding vindication from the panel set up by Gatt to review the complaint but the panel's verdict — that measures by the EC to prevent circumvention of its anti-dumping duties are illegal — has blown a gaping hole in what has become Europe's main defence against cheap imports of electronic goods from Japan and other Asian countries.

countries.

Some trade analysts say it may also give a decisive push to talks in the Uruguay Round of multilateral trade negotiations on the establishment of a much-needed new set of rules to cover the whole field of anti-dumping.

Anti-dumping actions designed to

stop predatory pricing in interna-tional trade have become the most frequently-adopted trade policy instruments after tariffs in both the EC and the US, according to the Gatt.

Their application to high-technology products with short cycles and volatile prices has made dumping more controversial than ever in recent times. Last December Mr Arthur Dunkel, Gatt Director General, warned of the "important implications" of this development for the

multilateral trading system.
Critics of the EC charge that it has exploited the vague wording of international rules to make anti-dumping a tool of industrial policy instead of simply a means of gaining relief from

predatory pricing.
Along with the US, the EC argues that modern business conditions make duties increasingly difficult to apply effectively. Companies found guilty of dumping can simply avoid payment by moving their final assem-bly operation to another market.

Of the 56 goods currently subject to EC dumping duties, nine are electronic products, mainly from Japan.
The value of these goods dwarfs the others; trade in dot matrix printers, in photocopiers and CD players was each worth more than Eculbn when the duties were imposed, more than all

the other cases put together.

Japan's attack concentrated not on the EC's basic dumping rules, however, but on measures taken by the Community since 1987 to prevent Japanese companies from circumventing anti-dumping charges by switching final assembly to "screwdriver plants"

Without some such means of pro-tection, the EC felt anti-dumping rules would be a pretty weak tool against imports of easily-assembled electronics products. When the EC imposed dumping duties on Japanese electronic typewriters in 1984, Japan was importing 700,000 units into the EC. By 1988, almost as many Japanese typewriters were being assembled in the EC, leaving a mere 35,000 directly

imported from Japan.
In that year, the typewriter producers were found guilty under the screwdriver rules and agreed to increase the non-Japanese content of their production to 40 per cent. The EC applies strict conditions to its anti-circumvention rules. They

only apply to products already found to have been dumped; output in the Community must have increased substantially since dumping was found; and at least 60 per cent of the parts of dumping. Yet the Gatt panel declared these

rules illegal. It said they amounted to a discriminatory charge on Japanese companies operating in Europe. Dumping duties could only be collected at the border. Moreover, undertakings sought from Japanese companies that they would limit the use of Japanese parts in their European plants discriminated against imports and were also illegal.

Peter Montagnon and Lucy Kellaway report on the row over the EC's anti-dumping policy

The 'predators' and the investors

Article XX of the international trade body allows its members to deviate from the normal rules of international trade if this is necessary to secure compliance with Gatt-conto secure compnance with Garr-con-sistent measures. However, the panel found no proof that Japanese compa-nies were trying to evade payment of duties. Their action could simply be explained as a normal and acceptable commercial decision to avoid duty by shifting assembly to a plant within the Community.

shifting assembly to a plant within the Community.

As Europe's use of anti-dumping grew, Japanese companies stepped up their direct investment in the EC, but, as Japanese officials told the Gatt, this was not just due to anti-dumping actions. The rise of the Yen, a desire to be part of the 1992 single market and a desire to get closer to their and a desire to get closer to their customers in Europe also played a part. The EC had failed to take these other motives into account

Since introducing its anti-circum-vention rules, the Commission has investigated production at 34 Community factories making seven different products. One investigation - that of video-cassette recorders assembled by Orion in the UK - is still going on. In 15 cases, the Commission found that the rules were being broken, but rather than impose duty, it preferred to get undertakings from the compa-nies concerned to boost non-Japanese

There is little danger that these undertakings will now unravel. Officials in Brussels believe that the inconvenience and the political sensi-tivity of shifting back to Japanese suppliers may mean that sourcing patterns remain much as now.

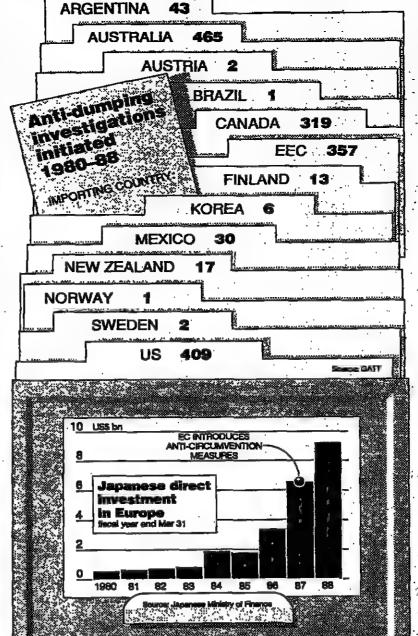

The finding has still, however, left the EC on the horns of a dilemma. On the one hand it does not want to be labelled a bad citizen by refusing to accept a Gatt ruling against it. On the other the ruling drives a coach and horses through its present policy. "The panel says our legislation is in conflict with the rules but it does not solve the problem (of circumvention), says Mr Frans Andriessen, EC Trade Commissioner.

Circumvention is, however, only part of the broader international debate on dumping, Rangedon one side are Asian countries such as Japan which want an end to what they regard as unfair harassment of their exporters by anti-dumping actions. On the other are trading powers like the EC and the US which regard anti-dumping as an essential and legitimate instrument for use

against predatory pricing.
As the table shows, Canada and
Australia also have a long tradition of recourse to anti-dumping action, although the number of cases initi-ated by the latter has fallen sharply since 1988 when it tightened its sions to the Gatt panel both Canada and the US expressed sympathy with the EC position. Canada said it was "sympathetic to the valid concerns governments might have" regarding circumvention. The US said anti-circumvention measures were an "essential necessity."

The world economy had changed

out of all recognition since Gatt was founded in 1947, it said. Manufacturing operations had become increas-

ingly integrated, multinational sourcof parts was now common and it had become easy to switch the loca-tion of an assembly operation.

"Global sourcing and flexibility of production could, within a matter of months, eviscerate an anti-dumping duty order issued on a final prod-. . . Without anti-circumvention measures, the delicate balance of rights and obligations which formed trading system might be seriously

Finding an acceptable way of dealing with circumvention is none the less likely to be difficult. Although Gatt admits the principle of anti-cir-cumvention, there are no specific rules on how it should be made to

The panel's narrow interpretation of Article XX makes it hard to conceive of an anti-circumvention

scheme which would work in practice and still be in conformity with the Gatt. It might, however, be possible to agree mutually acceptable rules under Gatt's separate anti-dumping code. Subscribers to this code form a lim-

ited club of some two dozen countries but they account for a major proportion of world trade so an agreement under the code might largely solve the problem. Talks to reform the code Round in response to the broader con-troversy over anti-dumping. Among

the concerns were the:

use of formulae tilted towards a positive finding of dumping, not only by the EC, but by other countries too. Gatt's dumping code has no specific rules on how dumping margins should be calculated. Critics say this makes it easy for countries to extend their actions beyond simple defence against predatory practices.

high cost to consumers of anti-dumping duties. The imposition by the US last year of dumping duties on a wide range of ballbearings led to a furious outburst from engineering firms such as Caterpillar, Hewlett Packard and General Electric. They argued that the dumping duties on an essential input would increase their costs and make them uncompetitive while lining the pockets of US produc-ers.

while lining the pockets of the productions.

Similarly, European companies like Olivetti, Bull and STC protested vehemently at an EC agreement with Japan to end an anti-dumping enquiry into memory chips by imposing a floor-price on Japanese product sold in the Community.

Spread of anti-dumping legislation to developing countries which see it as an attractive way of providing protection to their own industries. Mexico is the most frequently cited example of this, but countries like Brazil and South Korea have also launched dumping cases. This has

Brazil and South Korea nave also launched dumping cases. This has alarmed some businessmen in the industrial world who see the risk of anti-dumping measures being turned against them. That in turn has helped against them. That in turn has helper generate support for efforts to reform the rules in the course of the Uruguay Round. The hope among the would-be reformers is that the Gatt panel finding will prompt a hitherto reluctant EC to take a more active role in talks

on anti-dumping reform.

According to Mr Gary Horlick, a specialist lawyer with the US firm of O'Melveny & Myers, the door may be opening for an eventual trade-off. The EC and US could negotiate specific rights under Gatt's anti-dumping code to adopt anti-circumvention measures in return for better rules on how dumping margins were to be calcu-

This would help satisfy Japanese demands for greater discipline and transparency in the operation of anti-dumping measures which, alongside a better definition of injury, is one of

their main objectives.

It is not yet clear, however, whether the Broguay Round negotiations will move in this direction — the BC is still considering whether the best response would be to seek agreement in the Round or to try and adapt its legislation to conform with the panel finding. This might involve a new plan simi-

lar to the US system in which duties are imposed at the border on parts of goods subject to a dumping duty in the US, when the extra value added through assembly is "small."

Adapted following the 1988 US Trade Act from anti-circumvention

measures in force since the early 1980s, these rules have been applied from time to time and never actually contested in the Gatt. However, trade contested in the Gatt. However, trade experts say that it is far from clear whether they fully conform to current rules. Also, they are cumbersome to operate because they require policing the shipment of parts. An item such as a photocopier may comprise as many as 1,000 parts.
On the other hand, by placing the

emphasis on value rather than con-tent, the US acheme avoids the prob-lem of rules of origin that the has plagued the EC. Its content approach has opened up a Pandora's box since it is very difficult to arrive at objective origin definitions for some high technology products like semiconduc-tors and printed circuit boards. Last autumn saw the start of a new row as the US accused the EC of unfairly force not only Japanese companies but also the US companies who wished to supply to them to invest in

Europe.

Following the US route might spare the EC some problems with rules of

The main lesson of the panel finding, however, is that the biggest problems come when anti-circumvention measures are applied unilaterally outside the general consensus.

Rally of the monetarists

■ The admission by Robin Leigh-Pemberton, the Governor of the Bank of England, last week that "something has gone quite badly wrong" with monetary policy over the last two or three years was music to the ears of the Institute of Economic Affairs. For the IEA is preparing a new initiative under which monetary policy will be subjected to closer scrutiny by what it regards as the best and the brightest of Brit-

ish economists.
The idea is to set up a Shadow Monetary Policy Group which will meet several times a year and publish its minutes, though possibly with

Robert Graham reports on today's drug conference in London

Tackling the cocaine menace

"COCAINE has come from nowhere to become potentially the principal drug of misuse, not only here [in the UK], but elsewhere in the world," says Mr David Mellor, Britain's Junior Home Office Minister. As one of the hosts at this week's three day international ministerial conference in London on reducing demand for drugs and combating the supply of cocaine, Mr Mellor has a vested interest in highlighting the issues at stake. But it needs no hyperbole to talk about the cocaine threat

ans

The cocaine traffickers may have been put on the defensive by heightened international action but they still have huge besources at their disposal to play on an as yet unchecked demand. The harder the "cocaine war" is fought, the more officials realise they have underestimated the scale and ramifications of this traffic. Last year 200 tonnes of cocaine was seized globally by

customs and police. Yet this represents at best no more than a quarter of the 776-tonne annual production estimated by the US Drug Enforcement Agency (DEA). Late last year, the DEA concluded that almost twice as much more cocaine was being produced in Bolivia, Colombia and Peru than previously suspected.

Up to 10m Americans are spending between \$20hn and \$25bn a year on their cocaine habit - more than half the combined GNPs of the three Andean producer countries. European officials take comfort from the fact that cocaine selzures in Europe represent less than 5 per cent of the total. Balf of these are in Spain, the principal entry point. However, the Europeans are

conscious of the way the US authorities focused too heavily on the main drug of abuse, heroin, in the late 1970s and early 1980s, ignoring the multiple dangers of cocaine. In Europe, heroin is the hard drug that still poses the most problems. Seven times more heroin is still produced worldwide than cocaine, but cocaine use is rising. Mr Mellor warned recently. The American expe-rience shows we underestimate

Cocaine at our peril."

No doubt the British Prime
Minister, Mrs Margaret
Thatcher, will take the chance to politic at the London conference. Like President François less, President Bush's \$10.6bn Mitterrand of Franço, she is drugs budget this year remains determined to play an active 60/30 in favour of combating

role in what looks set to become one of the chief international issues of the 1990s. But while President Mitterrand has directed the French initiative to uncover and stop money laundering, Mrs Thatcher is concerned with

measures to reduce demand.

Drug offensives have emerged as a poorly co-ordi-nated mix of bilateral and mul-tilateral initiatives even after the 1988 United Nations Convention on Drugs enshrined international co-operation.

The US has never trusted the

UN to play its promised central role. The UN has jointly organised the London conference with the UK Government. It follows a February summit in Cartagena, Colombia between the three Andean cocaine producers and the US, which emphasised a regional approach to combating

The Cartagena summit marked a shift away from the previous lop-sided approach championed by the US that placed prime importance on curbing supply: crop eradica-tion/substitution and interdiction. In theory, equal impor-tance is now attached to reducing demand. Neverthe-

systems and the policing effort. In Colombia, matters have been taken one stage further and the state is facing a direct supply. On the demand side, considerable stress rests on extra policing and more use of the military rather than educaarmed challenge from the cocaine barons. The supply end can only be tackled successfully by aiming large sums of development ald not merely at crop substitution, but also at tion/health spending. As a rule, the EC also devotes more to interdiction and policing than

dealing with demand.

Governments of countries producing drugs have long argued that supply is a func-tion of insatiable demand in wealthy industrialised nations.
Reduce the demand, they say,
and supply will adjust accordingly. This then makes it
easier to concentrate on crop eradication and substitution. In this respect at least, the London conference should give impetus to a serious multilateral effort to reduce demand of all drugs of abuse.

A more balanced approach towards supply and demand in the 1990s would be to view the whole issue as a North-South roblem. The drug problems of the producing countries are essentially developmental. The coca leaf, for instance, has traditionally been the most profit-able and viable crop in the Andean footbills. Illicit production is facilitated by poor com-munications and the remoteness of the production areas. The temptations of high prof-

tive cocaine derivative, crack. On the demand side, the difficulties are equally costly to resolve. Education, health, and tackling inner-city decay are at the heart of any solution which eschews the dramatic initiative of decriminalisation. Although drug-producer countries have a much larger degree of con-sumption/addiction than they admit, the focus has to be on the industrialised countries. This is not only where demand its in poor societies encourage is greater but where the traffickers profit. A US congressio-nal committee recently esticorruption which in turn undermines the judicial

mated that worldwide money laundering was a \$300bn-a-year business. Of this, one-third was in the US, a large proportion of which came from cocaine and

heroin trafficking.

Attacking illicit profits is the subject of a special session at this week's conference. This is potentially the most vulnerable aspect of the drug business yet the area where international co-operation has been slowest. US officials, while admitting their own house is far from being in order, complain that elsewhere lax supervision of banking systems, the plethora of offshore tax havens and the sheer power of money still tilt the scales in the traffickers' favour. Last year the DEA seized \$973m worth of traffickers' assets yet the street price of cocaine fell.

International strategy may become more co-ordinated but the timescales for reducing demand awkwardly match up with those for curbing supply. The main cocaine market, the US, aims to cut demand by 55 per cent over the next decade but in that time the producer countries are unlikely to obtain the necessary develop-ment resources. They will also be expected to sustain socially disruptive, politically dangerous and economically costly wars against the traffickers.

The female participation rate

IN HIS BUDGET Mr John Major promulgated the sound principle that "it is not for the Government to encourage or is, in any case, not a sensible target for economic policy. The discourage women with children to go out to work." But, not one to let a sound principle come in the way of a politically attractive gesture, the Chancel-lor then offered a new perk, that on workplace nurseries, which are to be exempt from taxation as a benefit in kind.

The Treasury believes that this perk will cost a mere £10m. If so, it will prove cheap as perks go. But the measure will prove the thin end of a very long wedge. How, for example, can the Government provide subsidies for workplace nurseries and not for nurseries near the mother's

The starting point for the recent pressure has been one of those periodic hysterias about "shortages." In the early 1980s there was the "job short-age;" and in the late 1980s there is the "labour shortage." Both rest on the crumbly foundations of the "lump of labour" fallacy, the view that one worker too many entails unemployment and one too few means a labour shortage.

Because of the reduction in the number of young people coming on to the labour market over the next few year mature women, presumably close substitutes for these young people, must be invel-gled back to work. Otherwise, unspecified horrors are supposed to befall us. Those horrors are unspecified because they are imaginary. There is no such thing as a

"labour shortage;" there is only labour that is too cheap. But this is a blessing, not a problem. The natural and appropriate response to the excess demand, will be a rise in real wages. As wages rise, the "labour shortage" will disappear as completely as did the "job shortage" before it.

Over the last two decades there has been a marked con-

there has been a marked con-vergence in the activity rates of men and women. Labour force participation of women aged 25 to 44, for example, rose from 52 to 71 per cent between 1971 and 1988, while that for men in this age bracket remained constant. The tightening in the supply of female workers (augmented, perhaps, by the limited supply of young people coming on to the labour

upbringing of children is, it might appear, unlikely to be well served by encouraging parents to hand them over to the stream of ill-trained young women who are, in practice, their most likely replacement.

To this objection comes the call for "quality childcare." Quality childcare is, indeed, available to relatively well-off parents, but Norland nannies are for the few. Professional childcare for all is inconceivable, even if it were sensible. Standard local authority norms suggest that professional care for all British children under five would employ getting on for a million carers, more than twice as many people as all the nurses in the NHS, while the cost would be over £10bn a

If the Government were to contemplate spending such a sum on childcare, would it not be far better to give the money directly to the mothers - per-haps through a special benefit for mothers of young children

either to purchase the care
or, alternatively, do the caring
within the family? There is no

Case even for vouchers here.
Cash would do.
Finally, there is a sound educational argument for the provision of more nursery school education. Though far less costly than comprehensive daycare for all under fives, even comprehensive nursery school provision would not be cheap. The cost might well rival what is spent today on all the universities.

Deciding upon appropriate levels and forms of public assistance to childcare will prove impossible if the argument starts from myths like the "job shortage." None the less, cases can be made for tax deductibility of childcare, for more general assistance to parents and for the expansion of nursery school education. The fundamental issue, how-

is precisely the same case as that for the deductibility of all other job-related costs — those of commuting, for example.

Economics is only the beginever, is how best to help women, upon whom still falls most of the costs of the socially essential task of bringing up children. That objective can be met by more generous financial support, especially to mothers of young children. But there is no reason why that support should be predicated on the absurd notion that childcare is, indeed, a socially approved job, but only if the carer is unrelated (and presum-ably indifferent) to the child.

How to get the dollar down to a sensible level

From Mr John Williamson. Sir, At one time Martin Feld-stein ("Time to bid farewell to the Louvre Accord," March 29) used to assure us that governments were powerless to influence exchange rates and implied that the dollar would continue to depreciate to Y100 at a rate of 1.5 per cent per month whatever they did. Now, however, the Group of

Seven's ability to assure the markets that the dollar will not fall below the level declared to be appropriate at the Louvre is held responsible for the dollar rising higher than they want. (Strangely, governments do not seem to have the same ability to convince the markets that the dollar will not rise above the top

of its target zone). The truth lies somewhere between Feldstein's original and revisionist positions. Governments do have some power to influence exchange markets. The direction of recent interventions suggests that this being explain why the dollar is so much less overvalued now than it was when Feldstein was chairman of the Council of Economic Advisers and the dollar was left to market forces. But they do not have the ability to guarantee that the rate will not fall below a certain level, still less to con-

vince markets that it will not. The policy needed to get the dollar back down to a sensible level is not a return to laissez-foire in the currency mar-kets but adoption and implementation of a comprehensive set of principles for policy co-ordination on the lines that I have helped develop elsewhere. (J. Williamson and M. Miller, Targets and Indicators: A Blue print for the International Co-ordination of Economic Policy, 1967). Two of these principles are of particular relevance.

One says that the (published) target zone should change over time to offset differential inflation. Feldstein is quite correct to say that if the right yen-dollar rate at the time of the Louvre was 130, then the right rate now is 120 or less. If the G-7 emphasised this, it would eliminate any danger that the high nominal interest rate needed to produce a given real interest rate in a high-inflation country would act as a magnet for foreign capital because the market would be assured that the excess interest payments would be offset over time by currency

depreciation. The other principle says that, fiscal policy needs to be co-ordinated too. The primary failure of the Louvre was that it did not contain meaningful

commitments on fiscal policy. Japan did introduce a useful fiscal stimulus a few months later, but the US is still pussyfooting instead of adopting the decisive restraint that is needed. Once again, it seems rather clear that the needed action is more likely to be pro-moted by strengthening policy co-ordination than by disman-

tling it. John Williamson, Institute for International 12 Dupont Circle, NW, Washington DC

From Mr David Morrison.
Sir, While wholeheartedly agreeing with Mr Feldstein that fixed exchange rates are inappropriate for the world economy, several of his claims are hugely inaccurate and most of his reasoning is thoroughly confused.

The first incorrect allegation is the central bank intervent.

is that central bank intervention to suppress the dollar ended a few weeks after the September 1989 G-7 meeting. Anyone who has been awake since the start of 1990 knows that the Bank of Japan has spent much of the first quarter selling substantial amounts of dollars. The Bundesbank also engaged in several bursts of aggressive and gratuitous dol-lar selling in January and Febrnary even though the DM/8 rate has hardly moved since end-1989.

the entire state infrastructure.

The Andean countries claim they indefinitely need \$3hn a year. The US has promised \$2.2hn through to 1995. Since

such sums are unlikely to be forthcoming, supply at best can only be reduced in the

medium term. Experience with

cocaine and heroin suggests

the source of supply can be switched with great speed and new "products" can be devel-oped such as the highly-addic-

Secondly, Mr Feldstein's claim that the dollar is overval-ued is unsupportable. Our own competitiveness calculations suggest that purchasing power parity (PPP) would hold at Y/ \$209 and DM/\$2.34. While not touting PPP as a sensible measure of medium-term exchange rate "equilibrium," we have not seen, or heard of, any calculations which would suggest

that the dollar is expensive rel-ative to boday's spot rate. Thirdly, Mr Feldstein claims that the US bilateral trade deficit with Japan has been stuck at \$50bn since 1986. It has not. The bilateral deficit peaked at \$52bm in 1987, fell to \$45bm in 1989 and is at present running at no more than a \$40bn annual rate. It is slow but it is

Furthermore, the US trade balance with the European Community has swung from a \$16.5bn US deficit in 1986 to an estimated \$6bn surplus in 1989. If bilateral trade balances were critical, which they are not, why is Mr Feldstein not calling a higher dollar against the D-Mark? David Morrison,

Managing Director, Goldman Sachs International,

Investment Banking in the finest Royal Tradition

HYPO-BANK, Bayerische Hypotheken- und Wechsel-Bank AC, Theatinerstrasse H. U-8000 Munich 2

Stopping the forces' outflow

From Mr Charles Grey. Sir, Your editorial comment ("New choices in defence," April 3) draws attention to the alarming outflow of servicemen on premature voluntary release. It also appears to refute the increasingly expressed cynical view that the Government accepts this bloodletting because it foresees the need to remove forces from Germany to a UK without spare barracks.

You point out that the best people go first and that includes the most employable. They have had heavy public investment in their training (last year's training bill was £1.4bn). Even much reduced forces must spend again on replacements for such key peo-

My association is deeply con-grand over the principal cause this problem, as it bears on the Army and parts of the Royal Air Force. Our researches, with both serving and ex-service families, con-

vince us that most leave in order to join their contempo-raries on the housing ladder. The alternatives of separation or absentee landlordism have been demonstrated failures; even for those who can afford to buy while serving. Only by becoming civilians

can servicemen freely enjoy the government assistance available to 90 per cent-of the population through mortgage relief, housing association discount or council house pur-chase. Only this step can assure them of a home later in

The cost of providing similar taxation reliefs, against savings for future house pur-chase, for those occupying service quarters, is small compared with the training bill. We must be prepared to spend in order to save. Charles Grey, Controller,

Soldiers' Sailors' and Airmen's Families Association, 19 Queen Elizabeth Street, SE1

Profit and charitable investment

From Mr Richard Best. Sir, The dilemma facing the Church Commissioners, to which the Bishop of Oxford is drawing attention ("Bishop to test Church on finance," March 27) faces other major charities which are also investors. Is it possible to invest in ways that secure the maximum return and at the same time produce direct benefits to society?
The Joseph Rowntree Memo-

rial Trust has devised a model for investment in low-cost rented housing. This is intended to provide a high yield but also to combat the social problem of acute shortages of affordable housing. The trust hopes the Church Com-missioners will consider an investment of this kind.

We have set aside £10m for investment in housing association schemes. We will fund that next of such have a state that part of each home which is not covered by Housing Association Grant (paid through the Housing Corporation to the association). The

terms will be based on an index-linked coupon of 4.25 per cent, but with the capital linked to increases in house

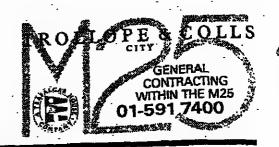

This combination of rising income, plus capital growth based on property values, pro-duces a total real return which may well out-perform the stock market. If this kind of investment had been available for almost any 20-year period starting in the 1950s or later, it would have out-performed investment in equities. Yet by providing housing associations with a low-start loan - in place of mortgages at over 15 per cent — affordable rents can be achieved for those with low

Our conclusion is that investments can assist charita-ble activity and be profitable. Richard Best, Director.

European bank talks under way

CENTRAL bank governors from the European Commu-nity will start discussions tomorrow on preparing statutes for a European central bank, writes Peter Norman. Economics Correspondent.

December of the EC's intergov-ernmental conference (IGC) on steps towards economic and monetary union (EMU).

It is understood the bankers' plan was endorsed by EC finance ministers at their informal meeting at Ashford Castle in Ireland just over a

week ago.

It represents a further involvement of the central bankers' group in the deliberations on taking economic and monetary union beyond stage

report on EMU. Only stage one, which stops short of moving the EC towards a single currency and central bank. has been adopted as policy by all EC member states. The bankers' committee, which is chaired by Mr Karl

Otto Pohl the Bundesbank president, is already exploring ways of harmonising monetary policies in the individual member states. The Bundes-bank is expected to push hard

for the projected European central bank to be independent of political interference.

of political interference.

The work on the statutes of Eurofed (as the EC Commission has dubbed the projected European central bank) could put Mr Robin-Leigh Pemberton, the Governor of the Bank of England, in a difficult position. The British Government does not accept stages two and does not accept stages two and three of the Delors process and

profit from nature cure in India

Industry

aims to

By Gita Piramal in Bombay

WHEN the probing microscopes and computers of western science are focused on eastern secrets, the results can sometimes be not only academically interesting but also com-mercially profitable.

mercially profitable.

This appears to be the message contained in a new cough syrup based on ayurvedic herbs and developed by Procter & Gamble India, the Indian subsidiary of the Ohio-based Procter & Gamble, the American can consumer products giant.

Medicines based on herbs,
according to the tenets of ayar-

veda (a Sanskrit word meaning knowledge of life), have been used in India for over 2,000

years.

Based on such herbs, P&G India has developed Vicks vaposyrup, an ayurvedic cough remedy. "It is as effective as cough syrups containing conventional chemicals used in western medicines but heing made out of herbs, it is much sufer. Vicks vaposyrup does sufer. Vicks vaposyrup does not contain alcohol nor any toxic substances," claims Mr Gurucharan Das, P&G India's

managing director.
Currently test-marketed in the state of Maharashtra, a national launch is scheduled for later this year. There are also plans to register the cough syrup in 11 countries, includ-ing the US, making it the first P&G global product of Indian

origin. But when Mr Das first suggested that the company should commercialise the sup-ply of popular herbal medicines, opinions differed widely. Several senior executives were less than enthusiastic about their market potential.

Others questioned P&G India's ability to devise an ayurvedic formulation which could compete with the efficacy of a western drug. Armed with tacit approval

from the American parent com-pany. Mr Das nonetheless staked his Harvard business school whizz-kid reputation on his hunch and went ahead. He started by hiring Dr Ralgopalan, a biochemist who had worked in Ciba Gelgy's years, with the brief to develop an ayurvedic line of products. By 1984, P&G India had set up the Ayurveda Research Centre a Rs400m (\$24.3m) research and

development facility.

In the process, P&G India compiled a unique databank on herbal plants. Based on this information, the company began work on a cough syrup. Two years of development studies, one and a half years of clinical tests and Rs500m later, P&G India began test-market-ing Vicks vaposyrup. With throats perennially parched by pollution, Bombay's harassed

Despite its initial success, P&G India is clearly not taking any marketing chances: the new cough remedy comes with the famous Vicks brand name, neatly tagged on to it. Mr Das offers a slightly different ratio-nale. "In my view, brands by themselves do not sell prod-ucts. People buy brands for the quality the brand represents." Apart from its intrinsic qualities, Indian government poli-cies will probably help domes-

tic sales. As an ayurvedic preparation, it will enjoy several concessions denied to conventional cough formulations. A major benefit is that it will be outside the purview of the drugs (prices control) order and can be sold over-the-counter in chemist shops as well as other retail outlets.

Another advantage lies in a clause enabling ayurvedic medicines to claim exemption from certain excise duties. This should make its price highly

ment in the new cough remedy is critical to growth. Though highly profitable - the com-

several years .

According to Mr Das, sales had levelled off in large measure "because we had run out of products." In a bid to make up lost time, P&G India has recently introduced several new products into the market which have encouraged the

Rs654m). Can P&G India achieve this?

April, 1990

Bad medicine for US industry

Pennsylvania's redneck anti-takeover law is more than just a body blow for anyone wanting to take a run at the state's local companies, such as Westinghouse Electric. It also looks like crowning evi-dence that the US legal and political climate is swinging decisively against a free mar-ket in the control of compa-

The Pennsylvania measure suggests that state legislators have lost any inhibitions about passing draconian statutes. This is not surprising. The judiciary seems none too keen on takeovers either. Since 1982, on takeovers either. Since 1982, there have been at least two US Supreme Court rulings upholding state anti-takeover laws. In the Polaroid case in early 1989, the Delaware courts allowed Polaroid to sell a large line of stock to an employ share ownership plan, effec-tively blocking a takeover. The last straw was Time/Warner, when a Delaware judge appeared to widen by a mile the rights of board directors to

ignore a hostile bid. It is hard to see the US federal government reversing this legal trend. The SEC can huff and puff, but it cannot rewrite constitutional history and stop individual states regulating the internal governance of compa-

The danger is that whatever the excesses of takeover mania, nobody has come up with any other practical method for forcing improve-ments in US corporate perfor-mance. But the dismal earnings record of any number of large US corporations, such as General Motors, IBM and Rest-

man Kodak, suggest this is an urgent task.

A glib answer is that large institutional investors should elbow their way into corporate decision-making, to make managements accountable. There agements accountable. There are signs of this, such as shareholder activism by large state employee pension funds. But in a far-flung environment like the US, where even the identities of shareholders are difficult to get at, this is even harder than in the closer-knit City of London. Putting down resolutions at shareholders' meetings to overturn polson. meetings to overturn poison pills and golden parachutes, or to urge Philip Morris to get out of the tobacco business, is all well and good; but it does not make much practical impact on the short or long term run-ning of a business. It looks as if the only thing that would really shake up some US man-agements is a full-blown reces**General Motors** Share price (\$) relative to the

Results season

There has been little to dis-turb the sleep of the institu-tional investor in this year's results season. So far, the non-financial stocks in the FT-SE 100 have been producing prof-its growth of around 25 per cent, dividend increases of 20 per cent and earnings growth of 15 per cent. Although many of the figures came as a relief after the sharp downgradings analysts made in December and January, on average shares fell slightly on the day shares left angulay on the day the figures were announced. Shocks have been infrequent; but when they have occurred they have caused sharp reactions, such as the 14 per cent fall in Cookson's shares and the 30 per cent plunge in those

of Mecca.
All that has been proved. however, is what a wonderful year 1989 was. This year should be a different story, although it is hard to tail from although it is hard to tell from chairmen's statements. Many of them have included cautious sentiments, but chairmen may simply have been anxious to avoid hostages to fortune. With results from several retailers and other interest rate sensitive companies still to companies.

tive companies still to come, we may yet hear the authentic tones of distress.

The underlying picture has not changed for some months. not changed for some months.

Small companies, most exposed
to interest rates and the UR
economy, continue to produce
bad news. Larger companies,
with overseas operations and
export opportunities, produce
solid figures. But the vice is
still tightening flags expect still tightening. Few expect interest rates to fall before the end of the year, wage rises are still above the rate of inflation and redundancies are making the headlines once again. Some indicators of the economy's health, such as machine tool orders, are flat on their back. More corporate casualties are

With most estimates of earnings growth this year stuck at between zero and 5 per cent, the buils seem set to rely on a revival of Tory popularity for excitement. Unless, of course, overseas corporations use the hiatus in profits growth to grab a strong position in post-1992 Europe; and there is little sign of that so far.

German shares

West German equities are no laughing matter. But with the stock market-wide DAX Index stock market-wide DAX Index still 30 per cent higher than before the Berlin Wall fell, some prices are hard to take seriously. Never mind the hig picture, with all the economic and political worries and the prospect of Mr Helmut Kohl battling it out with Mr Oskar Lafontaine for the Chancellorship later this year. From a strictly bottom-up point of view, there are sectors of the market which are looking overdue for a short-term correction at least.

at least.
It is just about understandable that Axel Springer Verlag is trading on a multiple of about 28 times estimated 1990 earnings. A takeover might happen one day; and the potential market in the East for that Bild has to offer is not

tial market in the East for what Bild has to offer is not small; though newsagents are thin on the ground on the Unter den Linden.

It is less obvious why Binding-Brauerei sells on a prospective p/e of 38. Eager though East-Germans may be for the delights of the West, Binding's non-alcoholic beer may not be their first choice. As for the retailers, Kaufhof, Horten and Karstadt, with p/e ratios in the 30s, look fairly priced only if they are about to find a way of liberating all the value locked up in their properties. Stockbrokers could be right in claiming that Eauthof has DM650 ing that Kaufhof has DM650 per share of net assets to back up its share price of DM697. Just when all that will come

선 5361

through to shareholders is quite another matter.

The pick of the bunch are the builders, like Holzmann (p/e: 54). This is where the market likes to have it both ways. When frankfurt bankers want to tall you why economic re-unification is easy, they say that East Germany has only same population as the state of Hesse. Logically, then, rebuild ing East Germany is no huge task either. If Holzmann were to double its profits in four years, its shares would still be on 23 times 1993, earnings. Even Nizdorf had trouble satisfying expectations like that.

Paribas reopens Navigation Mixte talks

By George Graham in Paris

NEGOTIATIONS have re-opened between Paribas, the French investment bank, and Compagnie de Navigation Mixte, the industrial conglom-erate for which it bid unsuc-

cessfully last year.
The two sides have been in deadlock since their fierce FFr26bn (£2.8bn) takeover battle last October and November. However, talks were held last week between Mr Marc Four-nier, chairman of Mixts, and Mr Michel François-Poncet and Mr André Levy-Lang, who have headed Paribas since the end of March. Further talks are expected to be held shortly.

After the autumn battle, Paribas ended with 40 per cent of

Mixte, while Mr Fournier built a stake of more than 12 per cent in Paribas. That has pres-Générales de France (AGF), the a stake of more than 12 per cent in Paribas. That has presented the investment bank with a potential obstacle to its plans to change its statutes to give it a two-tier management

Paribas proposes a supervi-sory board headed by Mr Fran-cois-Poncet and a management board headed by Mr Levy-Lang who is head of Paribas's principal financial services subsidiary, Compagnie Ban-

caire. This proposal will require a two-thirds majority at an extraordinary shareholders' meeting on May 30. Paribas's anxiety has been

state-owned insurance company chaired by Mr Michel Albert. AGF last week announced that it had increased its holding in Paribas to 9.8 per cent and Paribas officials have done little to dis-guise their nervousness.

AGF officials say they intend to seek permission to increase their stake above 10 per cent necessary because Paribas is a bank – although they have no intention of using this permis-sion in the short term unless circumstances change signifi-

They say they want Paribas

ment of their international activities – which they want to boost to 40 per cent of their premium income from 25 per cent today – and they also want to develop links with Compagnie Bancaire. Unlike its fellow state-owned

insurance companies, UAP and GAN, AGF has resisted the idea of "bancassurance," or the cross-marketing of insurance and retail banking products, because it sees an inevitable conflict between the bank branch network and its own network of exclusive agents. However, AGF says that Com-

Anti-trust laws may be eased for US-Japan joint ventures By Peter Riddell, US Editor in Washington

THE US GOVERNMENT has

strengthened its commitment to relax anti-trust laws to assist some joint ventures, as THE TAIWAN Government is one of the specific initiatives in expected to approve rules today which will allow the creits structural impediment talks with Japan. ation of private commercial

The interim report of the US Japan working group includes, among a number of US proposals to improve its competitiveness, a statement of administration support for legislation which would reduce uncertainty about the treatment of production joint ven-tures that enhance competi-

The proposal, foreshadowed by President George Bush three weeks ago, would promote joint production projects that enhance competition saleguards for consumers." At present, the relaxation on joint ventures covers only research and development.

The change follows a review by the Justice Department and

is in response to calls by the Commerce Department and several industry groups to allow such joint ventures, especially in the area of high technology, in the face of Japanese and other foreign competition. They have argued that uncer-tainties under the current law

inhibit such ventures. There is strong support for this change on Capitol Hill and consideration of detailed legis-lation will start this summer. Under the US proposal, when an anti-trust lawsuit is filed against such a production joint

venture, the courts would be required to take into account its competitive benefits as well as its costs.

Moreover, for production joint ventures which are notiand the Federal Trade Commission, anti-trust liability would be limited to actual damages rather than the current triple damage liability, In a briefing on the interim

report, Mr James Rill, the assistant attorney-general for anti-trust, said the relaxation applied solely to "legitimate pro-competitive production joint ventures." He stressed that the US manifest compiled that the US remained commit-ted to the principle of effective competition, "in large part because of our anti-trust principle."
Mr Rill said that the talks with the Japanese, held at the end of last week, had not pro-

duced any other commitment with respect to other aspects of anti-trust enforcement. All stages, from the joint research and development activities to the final phase of joint production, will be cov-ered by either the proposed leg-islation or the existing 1984

Natiodai Research Act (which covered research and development). US government guidelines will clarify the treatment of such joint ventures under anti-trust

Independent airlines hit by charter slump

By Paul Abrahams in London

BRITISH civil aviation is passing through the most difficult and uncertain climate it has ever had to face, according to Mr Graham Hutchinson,

managing director of Dan Air, the UK airline.
Sections of the industry are experiencing substantial restructuring and consolidation following the collapse of the UK charter market and a substantial increase in aviation operational and capital costs. Three UK airlines have failed

"The industry is alive with rumours," says Mr Michael Bishop, chairman of British Midland Airways, the UK's second largest carrier. "The situation means that everyone is talking to everyone else about

possible deals."

The result of these difficulties appears to be that most small and medium-sized airlines are now negotiating with major carriers. International Leisure Group, owner of Air Europe, has said it is looking for a strong international partner to develop its long-haul services. Dan Air is known to have also been holding talks with at least one major Euro-

A number of non-British airlines already hold stakes in UK-based carriers. SAS, the Scandinavian company, owns a quarter of British Midland, and KLM owns 14.9 per cent of Air UK. British Airways also has a

holding in Brymon.
"The big trouble is that government and civil servants became used to working with British Airways when it was a nationalised company," com-

plains Mr Bishop.
"In Europe, the interests of the state and the national airline appear synonymous. But in the UK where there is a substantial second force, the interests of British Airways and British civil aviation are not synonymous," he explains.

The only factor holding up restructuring is the result of two investigations by the Euro-

pean Commission in Brussels. The first is looking at the deal between British Airways, KLM Royal Dutch Airlines and Sabena, the Belgian carrier to create Sabena World Airways. The second is examining the merger between Air France and UTA, the other main Bumpy ride for small airlines,

INSIDE

Hoylake's hopes rest on Californian ruling

This afternoon in California, the state's insurance Department will deliver a ruling on whether the French insurance group Axa would be a suitable buyer for BAT's Farmers Group subsidiary should BAT be taken over by Sir James Goldsmith, the UK financier. Axa is seeking permission in nine separate states to buy Farmer's as part of Sir James's plan to "unbundle" BAT industries. Today's ruling is crucial, reports Nikki Talt, as California is well able to assess the financial arguments which are the nub of the matter. Page 23

Living up to the corporate code

Europeans often see the vogue for corporate mission statements as part of the hyperbole of American business. Yet properly handled, the formulation of a values statement, greatly benefit a company's cohesion and morale, and its external reputation. Some European companles are starting to appreciate the advantages that drawing up such a statement can

provide, as Christopher Lorenz reports in the Businesa Column. Back page

Hard to impress

Aquasculum is not impressed by the news that its dissident shareholders include Gordon Getty, part of the American oil family and one of the world's richest men. A spokesman for the British classic clothing company said: "We welcome him as a customer but cannot see what he brings to a team stready short of retail experience." Page 23

Just good friends?

Talks between Olivetti and Philips about co-operation come as the European computer industry is busily restructuring itself. Both companies have admited they want to build links with European competitors. Alan Cane asks whether Olivetti's vague description of establishing "sectoral partnerships" with Phil-

ips could presage a more wide-ranging combination of businesses. Page 22.

Uproar in the aero-engine global village

Charles Leadbeater and Roderick Oram report on MTU's switch of allegiance from GE to Pratt & Whitney he aero-engine industry is like an international village. The aristocracy are the three companies which dominate the industry, General Electric and Pratt & Whitney of the US and Rolls Royce in the UK.

The gentry are the six or so smaller companies such as Snecma of France and Motoren-Und Turbinen-Union of West Germany. In the shadow of the large landlords are the small holders, the hundreds of component makers and sub-contractors.

Last week the village erupted in uproar at an almighty scandal. For MTU, a member of the gentry had the effrontery to challenge the social order by breaking off its 25-year-old relationship with General Electric and switching its allegiance to Pratt & Whitney, GE's arch rival

MTU's insubordination stung GE's pride. On April 2 it lodged a \$1.15bn law suit against the com-pany and Daimler Benz its par-ent, accusing the West Germans of fraud, misappropriation of trade secrets, misrepresentation, breach of contract and breach of fiduciary duty.

The suit sets up a bitter trans-atlantic legal battle between two of the world's most powerful industrial corporations, which could turn into a lasting feud. As

most leading corporations are hungrily searching for alliances to help share technologies and markets, the acrimonious end of GE's relationship with MTU is a sharp warning of the potential

GE wanted a partner to share the risks and research costs of developing the next generation of high-thrust engines, its GE90, to carry wider-bodied airliners lon-ger distances. In exchange, MTU got access to GE's expertise and a

giving away precious know-how. If it is too closed it will be in denger of alienating its partner. Companies such as Boeing have gone to great lengths to pronave gone to great lengths to pro-tect their proprietary technology. In the mid-1980s, Boeing signed up the heavy industry divisions of Mitsubishi, Fuji and Rawasaki,

At the height of the project

Central to the partnership's collapse were two factors: how the partners shared technology, and the way they shaped the alli-ance to further their strategic ambitions.

share of the market. A lot turns on how allies man-age this exchange. If the domi-nant pariner is too open it risks

1968-MTU begins talks with Pratt & Whitney.

Dec 1988-letter of agreement between GE & MTU to cooperate on next generation high thrust GE90 engines, une 1988-memorandum of understanding confirms Dec agreement valid till 1992; sanctions limited cooperation

Oct 1989-GE & MTU agree to share business & technological information, approved by respective boards.

Jan 1990-MTU & GE announce renewed partnership. Mar 1990-MTU tells GE of its intention to cooperate with P&W.

April 1990-GE lodges suit.

nese engineers at Boeing's Seattle plant, but they were denied access to key areas because Boeing feared a steady seepage of technological expertise in manufacturing, wing

Judging by GE's 24 page suit, filed in a New York court, it could not be accused of being too closed. If anything it was too open. The suit says GE gave MTU highly-sensitive and detailed sign specifications for the ther-

component configuration. advanced materials and fuel effi-ciency of the GE90.

Boeing denied its Japanese partners computer simulations of how the 7J7 was intended to perform. GE says it gave MTU computer simulations of the GE90.

The GE suit alleges that MTU now has all the information it needs to build a competitor to the GE90, at vastly reduced research costs. That suggestion brought an indignant response from United Technologies, Pratt & Whitney's parent, which said:
"We would neither want or need
GE's research."

As it would have been difficult for GE to cordon off parts of its technology, its other option would have been to enmesh MTU more deeply within the relation-ship through cross-shareholdings. The ultimate protection for any alliance is its strategic rationals. If the alliance does not serve the

partners' strategic goals there is very little that will keep it alive. The strategic core of GE's relationship with MTU seems to have rotted away. As one veteran New York aerospace analyst put it: "The mere fact of a law suit suggests a misunderstanding of large

If MTU had stayed with GE it

would have been consigned to a sub-ordinate role in a highlyrisky project to develop an entirely new engine. MTU would have been stuck in the industry's

The relationship with Pratt & Whitney is intended to be much more a partnership of equals, with cross-shareholdings and a wider pooling of activities. It offers MTU the chance of joining

the big league.
The break up leaves GE looking embittered, indignant and embarrassed. It has lost two partners in the space of four years — a partnership with Rolls Royce broke up in 1986 after Rolls Royce beat GE to a prestige order to equip 16 Jumbo jets for British Airways.

The court documents show how exposed GE was to MTU and yet it failed to adequately protect

against its collapse.
With the GE90 project well under way the company is in need of another partner. One pos-sibility is that Japanese compa-nies which are showing a growing interest in aerospace, may be attracted as collaborators. If that were to happen, MTU's decision to break with GE could be seen in 15 years time as the catalyst for a much wider restructuring of

A usefully humdrum meeting in Paris

By Anthony Harris in Washington

isters in Peris "reaffirmed their commitment to economic policy co-ordination, including co-operation in exchange mar-kets" is apparently designed to comfort both the friends and opponents of policy co-ordina-

Like a statement from an Anglican Synod, it affirms faith without threatening any practical consequences. On a closer reading, it does contain a warn-ing to currency dealers: that the central banks will continue to get-together from time to time. Experience shows that co-ordinated intervention does impress the markets; and nothing much

it is better regarded as a deterrent than as an approach to market management, since dis-plays of unanimity are only impressive because they are relatively rare. In any case, few min-isters believe that they can effec-tively manage markets, or would know what to do with this power if they suddenly acquired it; so the communique looks realisti-

cally modest.

Even market operators know that markets occasionally chase

the very highest political level in both Paris and London. That

negotiations over the EBRD.

• The latest G7 meeting in Paris is unlikely to go down in history as a high point of eco-

nomic policy co-operation, but its host, Mr Pierre Bérégovoy,

the French Finance Minister,

had some cause for satisfac-

ted to average 2.5 per cent com-pared with 3 per cent on the other side of the Rhine.

HE predictably unstirring their own tails, and expect the news that the finance minauthorities to do something to authorities to do something to stop them; so if that was all the Paris meeting concluded, the ministers might just as well have saved their air fares.

However, there is another useful purpose to such meetings which will never be mentioned in communique, because, to admit it, might destroy the confidence which gives intervention what

To put it crudely, the popular illusion about these meetings is that they are intended to teach politicians to practise economics. Their actual effect, by contrast, is to remind central bankers that they are practising politics. I hope that this assertion may look sensible by the end of this col-

The trail starts, though, in the realm of theory. There is a whole policy industry, based mainly in Washington, which has a vested interest in arguing that, given the right advice and formulae, the ministers could achieve Utoplan results.

They could still the turbulence

of the markets, and supply more investment capital at lower inter-

This is contended not only by

academics with much past intellectual work which might other-wise look out-dated, but by insti-tutions — notably the IMF -which are themselves in danger of looking irrelevant in the modern world

They all purchase influence partly by flattering ministers with tales of the wonders they have already achieved with the Plaza and Louvre accords. There just enough truth in their case to lend it some plausibility. The markets have become less turbulent than before, and part of the remaining rise in volatility and in real interest rates in recent years undoubtedly is due to

T ncertainty imposes a risk premium on interest rates, and permits the misalignment of prices between markets which gets both academ ics and trade negotiators so

Market smoothing reduces uncertainty. Proclaimed, credible rules might work even better, of course; but some of the scademic analysis behind proposed rules of this broader kind seems to be based on nostalgia, rather than on a clear look at the current world. It looks back to our lost Bretton Woods innocence - the time, not at all incidentally, when the IMF really did rule the tide of international capital - for a cure to our present-day disor-

It is easier to understand the world by explaining why it is dif-ferent from the past, and has in some sense been turned upside in the reconstruction decades

after the war, the main job of policy was to create conditions in which a world of international specialisation could be re-created from the ruins. Goods had to be made, and

allowed to flow freely. Nobody worried about capital mobility, because there was a natural one-way flow from the US to all other countries. The job of the IMF was to

maintain pressure for "basic balance" - an attempt to ensure that while countries would finance solid productive invest-ment, they could not fritter away scarce international capital by borrowing to finance consump-

This was a disciplinarian code, a much softer version of the Stalinist austerity which ruled reconstruction in the communist Western governments chafed

at the restraints almost as soon as they became rich enough to rely on their own savings; the system could not outlive its success, any more than Stalinism could outlive its failure. e live now in a world in

which capital flows freely, but the move ment of goods has more and more to be negotiated. Trade purists are inclined to regard the restrictions which now rule as a form of political pollution, but the truth is that some poorer countries have imitated the rich so successfully that their production is seen as a threat.

We therefore try to buy time while their living standards catch up with our own. We, then, seem to have an Augustinian attach-ment to the free market ("make us virtuous, but not yet"). It is only the ex-communists who have a full Puritan devotion to the benefits of market freedom, hair shirts and all.

It is as well that those who make operating rules for policy - even when they meet in Paris for partly devotional purposes

remain aware of what they really practise as well as what they reach: and what they practise is political compromise.

In the practical world, there is a lot to be said for the humdrum. Pundits may "know" what exchange rates ought to be, or what capital flows are appropriate to compensate for the differences in national taste, prosperity and demographics, or what is the appropriate level for real interest rates, and long to be given the power to impose their views. Humble ministers and bank governors make no such claims; they know instead what what prudence insists on. Those who looked to Paris for new rules - or new freedoms - have been disappointed. A good thing too.

Economics Notebook

Stuck on a point of pecking order

at the weekend Group of Seven (G7) meeting in Paris. But other members of that select group of leading industrial powers are becoming increas-ingly frustrated at the apparent inability of Paris and Lon-don to reach a settlement. The problem goes back to

Japan's wish to move up in the rankings of the IMF to number two, behind the US, to reflect its importance in the world

economy.

At the end of last year, the UK, the current number two, to go down to number two, signalled that it was prepared to go down to number four, behind West Germany, by cutting its share of fund quotas or resources to around 6 per cent

from 6.9 per cent.

The present difficulty arises because France – the current number four - wants to keep that place in the rankings. But France's current quota of about 5 per cent would have to be raised if the UK's offer were to be the basis of a settlement that met France's wishes by giving both countries joint fourth position.

It is at this point that the interests of other members of the IMF get involved. Many other countries, particularly in the Third World, want higher quotas. An increase in France's quota would make it more difficult to share out the rights and responsibilities of IMF membership among these

The dispute has been relatively low key so far. But it will become more important as other problems that have been holding up a planned increase in the overall resources of the IMF come closer to solution. It is hoped that the IMF's policy-

AT SOME point in the next four weeks, the UK and France will have to resolve their dispute about who goes where in the pecking order of the International Monetary Fund (IMF).

The issue was not addressed the support of the supervision of Source and the support of the supervision of Source and the supervision of the supervision of the support of the supervision of the supe

some of its poorest members—

the right to earn IMF financial

Opinions are finely divided over whether the UK or France is most to blame for the pecking order problem.

The cognoscenti of international monetary diplomacy recognise that the UK has made a handsome offer to cede its present position in the IMF.

to Japan even though its prothe UK's position in the world This group, which includes some senior monetary officials from other big industrial countries, objects to France's wish to increase its stake in the IMF as running counter to the long-term objective of having quotas that fairly reflect the position of countries in the

world economy.

Among the non-cognoscenti, the number four slot. The pecking order issue has

ton early next month, it appears that most big countries are now prepared to sup-port an increase of about 50 per cent in quotas from their current level of 90bn special draw-

ing rights (\$117bn or £71bn).

Another difficult issue that has been holding up agreement—that of how to handle the arrears owed to the IMF by support from its Enhanced Structural Adjustment Facility in return for carrying out eco-nomic reforms. This support would be backed by gold depos-ited in the IMF by its members.

its present position in the IMF posed quota share overstates

a group which includes most finance ministers, the UK's position looks weaker. France has a somewhat larger economy than Britain and appears to have a fair claim to retain

THIS WEEK

THE OUTCOME of Saturday's Group of Seven (G7) meeting in Paris is expected to influence market sentiment today -although the meeting had no visible effect on it last week.

Expectations are focusing on the efforts of the G7 finance ministers and central bank governors to tackle weakness in the Japanese yen. The cur-rency is now almost 10 per cent

in both Paris and London, That is one reason why a compromise is so difficult.

Another underlying consideration hindering a deal may be concern about the consequences of eventual Soviet membership of the IMF.

The USSR would most probably become one of the "big five" in the fund, with its own executive director, and shunt lower against the dollar than at the beginning of the year. Meanwhile, although European bond markets have risen quite sharply, the uncertainty over the German situation. executive director, and shunt whichever country was in fifth position at the time of its joining out of this top group.

A more immediate reason for the dispute dragging on is the opportunity it gives for horse-trading on other matters. Both the UK and France want to provide a home for the planned. coupled with the unpredictable behaviour of the Japanese stock market, persists as

strongly as ever.

Analysts describe the Ger-Analysts describe the German situation as so fluid as to defy forecasting — although Warburg's research indicates the D-Mark will remain relatively stable against the dollar for the rest of the year.

German bund yields are expected to rise not so much in expectation of higher inflation following unification, but in concern over an enlarged budget deficit import prices have provide a home for the planned European Bank for Reconstruc-tion and Development to aid eastern Europe. France also has a candidate for the EBRD top job in Mr Jacques Attali, the close economic aide of President Mitterrand. The solution to the pecking order problem could well lie in further receptivities over the EBRD.

get deficit. Import prices have fallen for five consecutive months, while commodity prices are weak. Indicators of inflationary developments are expected to ensue from the

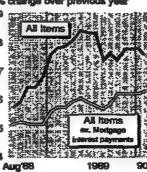

wholesale and producer price data on Friday. In the UK, the markets are preparing to hear bad news about inflation on Thursday with the publication of the latest retail prices index.

The French economy is per-forming extremely well at the moment. Last week, France Higher mortgage rates will probably have boosted UK inflation in March, and the index will also be lifted by was able to trim its interest rates by a quarter of a percenthigher excise duties, utility charges and the introduction of age point without any serious risk to the franc.

Indeed, the meeting heard that France is likely to better the poll tax. West Germany's price performance this year with French consumer price inflation expec-

However, some economists are predicting inflation will decline after these latest fig-ures. Also out on Thursday are the labour market statistics. A fall in employment in manufacturing is expected. On the Peter Norman same day, the markets will hear whether the rate of under-

% change over previous yeer

lying average earnings will lift above 9.25 per cent. IDEA, the financial research company, says the median expectation is for no rise in March.

Other events and statistics, with IDEA median forecasts in brackets, include:
Today: UK, provisional producer prices index input (0.9 per cent) and output prices (0.4 per cent) for March. Central bank governors of Group of 10 central bank gove

countries hold regular monthly meeting in Basle.
Tomorrow: Basle, committee of European Community central bank governors, monthly meeting. Canada, housing starts, March (210,000). Wednesday: No statistics

Thursday: UK, retail prices inder, March (a monthly rise of 0.9 per cent). Unemployment (-10,000) and vacancies (10,000) for March, average earnings (9.25 per cent) for February Australia, March unemploy ment data. France, consumer price index. March (0.2 per cent). Japan, machinery orders, February, and trade balance, March (Y5bn). US, retail sales, March (0.2 per

cent). Friday: Japan, wholesale price index, year-on-year, March (0.5 per ceut). Capacity utilisation, February, (102.7) US, producer prices index. (0.1 per cent), and business inventories. February (0.1 per cent). This announcement appears as a matter of record only.

Outlook no clearer after jobs data

THE MAIN event affecting the US Treasury market last week was the release on Friday of March employment figures. The non-farm payroll increased by only 26,000 last month. much less than the 150,000 to 200,000 forecast and considerably below the gains of more than 300,000 in both January and February.
The figure for average

hourly earnings, which jumped by 4 per cent, also received attention.

A straw poll of economists' reactions to Friday's figures shows that the outlook for interest rates has become no clearer and that Wall Street remains divided on where the economy is heading.

At stockbroker James Capel. Mr Geoffrey Dennis and Mr Stephen King argue that the US employment release was dramatic confirmation of the distorting effect of winter weather patterns, but that the small gain in the non-farm pay-roll did not signal a new weakening trend in the economy and that the US Federal Reserve will not ease monetary

policy in response. Salomon Brothers' credit markets team agrees that Friday's figures do not signal renewed economic weakness. but its conclusion is different. A picture of moderate economic strength is emerging. which will encourage a bias towards a more restrictive monetary policy. "Some policy makers already sense that inflation is now a greater risk than economic weakness," Sal-

Donaldson, Lufkin & Jenrette. This brokerage house argues that the March employment report greatly enhances the outlook for fixed income securities and predicts that interest rates along the yield curve will be lower at the end of this year compared to those at the end of 1989. This house does, how-

ever, acknowledge the emergence of a hawkish group within the Federal Open Market Committee at the February 6 to 7 meeting which favoured an immediate firming of monetary conditions. Mr Mark Cliffe, economist at

the Nomura Research Institute, gives a view from Japan. He reckons that what the US is experiencing, and will for some months, is "slugflation" — a combination of sluggish growth and stable inflation. At home, it seems there is little clear justification for the Fed to move monetary policy in either direction, giving no sense of direction for the Treathe ebb and flow of opinion, there appears to be an underlying sense that inflation is more of a problem than Wall Street had anticipated and than the Fed would like. The core rate

of inflation seems to be hovering around 4.5 per cent.
Nevertheless, bonds railled
last week for a host of international reasons, notably plunging Japanese stock prices and the concomitant strength of the dollar. The long bond surged by more than a point merely on rumours that a Japanese firm might be in trouble. It turned out that there was a speculative entity which could

not pay for a small amount of stocks it had ordered, and markets around the world heaved sighs of relief.

The episode illustrated that, for all the resilience of the US stock market - more properly blue chips - in the face of Japanese jitters, no world mar-ket can insulate itself from what is happening in Tokyo.

Japan will again be the focus

of the US bond market early next week in the wake of the Group of Seven meeting at the weekend. What normally hap-pens on these occasions is that currency traders come back to their desks, refreshed from the weekend, and set about confounding whatever the G7 has

decided to do.

In this case, it is likely that the dollar may initially be sold in response to a restatement of desire to boost the yen, but that traders will then start buying dollars aggressively to

in that well-worn phrase "test the resolve of the central

<u>banks,</u> The consensus of opinion last week on what new currency initiatives may emerge from the meeting was that it would be more of the same: co-ordinated intervention on foreign exchanges. One point which cropped up repeatedly was that, if the Fed was worried about inflation, it would he losthe to ease monetary

conditions purely to help the Japanese with the weak yen. A home-grown debacle will also be in focus this week: the ever more expensive bail-out of

the thrift industry. Not only does the bond market have to year bonds sold by the Resolu-tion Trust Corporation (RTC) tomorrow but the bill market will be hit by additional financ ing. Today, the Treasury will sell \$16.4bn in three-month and

six-month bills.

The RTC is determined to accelerate its bail-out of alling thrifts. In its first sever months, RTC merged or closed down 52 thrifts. It intends to deal with 140 more by June 30. The estimated cost of this is \$19bn, although, as Salomons points out, that figure could end up being more than doubled because RTC will not be able to sell the assets bought immediately.

immediately.
One factor mitigating this one factor mitigating this dramatic increase in the RTC's financing needs is that bill offerings normally drop at this time of year. Another is that the jump in bill issuance to provide working capital to RTC coincides with a wave of maturities of cash management bills, so funds freed in this way could be channelled into the high weekly bill auctions.

Some buyers appear despite gloom

LONDON cleared up the mess from the riot against the poll tax last week; Mr Norman Willis, general secretary of the Trades Union Congress, admitted he was worried about ris-ing wages; the Governor of the Bank of England said that monetary policy had been beset by policy mistakes; and a small earthquake shook Wales. Against this background it

was a surprise to many that money started to come back into gilts after months elsewhere. Sterling's unexpected strength, and the continuing positive reassessment of the Budget, were both supportive. The Treasury 11% per cent 2003/2007 ended the week at 99% to yield 11.85 per cent, while the Mean and the second while the Treasury 12 per cent, while the Treasury 12 per cent due 1995 was at 97½ to yield 12.75 per cent, both off their highs of the week.

Some of the market's rally

came from those who were leaving the German bund market, said Mr John Shepperd of Warburg Securities: "But more significantly, there has been

some straight buying."
There was some disagreement about where the money went - some analysts said it went into the short end, others stocks - but the whole market benefited. The weakening of US Treasuries late on Friday took some of the edge off the

Much of the buying seems to have been from institutions which had kept their money in cash, and were gambling that now was the time to put a toe into the water. "Nobody's seen

UK gilts yields Restated at par (%) 13.0 Apr 6, 1990 10 years 20 · 30

some big buying, in the hundreds of millions," concendreds of millions," concentrated on two or three securities houses, said one analyst. Some selling from Tokyo had been easily absorbed, he added. The theory was that if things did improve rapidly, then the best thing to do was to "buy while stocks last," said Mr Peter Clark of Kleinwort Benson: there might not be a better opportunity to get back in.

a: Wesburg Securities

ter opportunity to get back in. The question for this week will be how far this can be sustained, and most analysts were not hopeful, "People feel the situation is so bad that there are bound to be better buying opportunities down the road," said Mr Peter Spencer of

The gilts market may get a fillip from rising bond markets in the rest of the world, but in UK terms there is also a trade-off between fixed-income and equities. Mr Gavyn Davies of Goldman Sachs was blunt: "If we are going to get pleasant

Shearson Lehman Hutton

surprises on interest rates and inflation, equities will gain. If we are going to get unpleasant surprises, there's no point in going back to gilts."

The uncertainties that domi-

nate the market in its present moribund form could take months to be clarified. The rate of inflation is confidently predicted to approach 8 per cent in March and go above 9

per cent in April.
Wage negotiators are delaying the settlement of pay claims because they are worried that inflation will outstrip pay awards, according to Mr Willis. He said that he was "gloomy on wages" at a meet-ing of the National Economic Development Council last

Equally, the full extent of the rise in public spending will only become clear in the Autumn Statement, if not the next Budget. Mr Davies points out that, so far, the Government has been accommodating rises in nominal spending stemming from the rise in inflation. "Prior to the next election, we will get a rise in real spending as well."

Concerns over spending are one factor behind widespread

uncerfainty over the Govern-ment's funding intentions. Despite statements from the Treasury in the Financial Statement and Budget report, and comments last week from Mr Robin Leigh Pemberton. Governor of the Bank of England, there is considerable speculation about whether a shift in policy is under way

The Red Book's comments

on funding were hardly a

on funding were hardly a model of clarity, analysts say. "There is a suspicion that they want to muddy the water so that they can move the goalposts," said one.

Most wonder how rapidly the surplus will be unwound, and what the response will be to gilt issuance. "The budget surplus came out of a massive economic boom, the size of which nomic boom, the size of which the Government totally under-estimated," said Mr Ian Abrams of Nomura Securities, a point underlined by Mr Leigh-Pemberton last week. The revenue base is shrinking. and when the pressures for increased spending are added, the surplus could disappear as

quickly, said Mr Shepperd.
What is perhaps surprising is the degree of disagreement across the market about the prospects for government activity in the next 12 months. Some analysts think that the Government may start to issue sooner rather than later; others think it will be further ahead, perhaps not in this financial year. Some believe that the Government will take the opportunity to restructure the market towards more emphasis on 10-year maturities; others that the long end would be strengthened, or that the issuing would be along the

maturity spectrum.

What these uncertainties underline is that the gilts market is still in no man's land. The prop which sustained it, in the form of buybacks, has gone; but the arrival of new issues has yet to be signalled.

... Andrew Marshall

quiet to lend to BTR

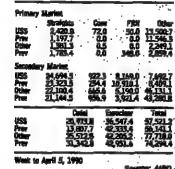

BARCLAYS BANK has quietly completed syndication of US Securities and Exchange BTR's 384-day \$1.50n financing Commission show it has for its attempted acquisition of agreed to pay its financial US-based Norton, with some 39 adviser. Morgan Stanley, an banks lined up to take a por additional \$5.1m in fees if a tion of the deal Bankers' appearance of \$750 a dvance. Morgan Stanley and the standard of \$750 a dvance. tites for the loan were so good that the deal was said to have been oversubscribed by 50 per

But, unlike other successful loan syndications for presti-gious borrowers, the lenders in the group - particularly the Americans - have asked Barclays to keep their identity secret. Why? Because when word leaked out in the Massachusetts community, where Norton is based, that Barclays was providing financing for the acquisition, the bank found itself besieged by angry employees in well-publicised, damaging demonstrations. It is the sort of publicity banks do

Barclays' predicament illustrates the pitfalls in financing takeovers by foreign compa-nies in the US market. Assethungry banks must weigh the merits of lending to a highquality borrower at a reasonable margin against the possi-ble customer backlash that the lending may generate. Bankers remember too well the sight of citizens in Pennsylvania cut-ting up their American Express cards in protest over the role of Shearson, American Express's subsidiary, as adviser to UK-based Besser in its acquisition of Pittsburgh.

ed Koppers. It remains to be seen whether banks will be called upon to provide any funds to BTR, since Norton is engaged in a spirited defence. Docu-

> EUROMARKET TURNOVER (\$m)

ments filed by Norton with the off BTR's advances. Morgan Stanley's initial fee is \$1.5m. However, Norton's manage ment may also be hedging its

bets. The SEC document shows that on March 29, after BTR's bid commenced, the board of directors amended "termination agreements" held with some of its officers and spelled out what constitutes a change of control of Norton The men of control at Norton. The man-agenient also passed a resolu-tion requiring Norton to pay the legal costs of any executive who needed to go to court to enforce conditions of the termi-

mation agreement.

Meanwhile, S.G. Warburg
and Citicorp investment Bank
launched into syndication the
£1.8bn medium-term loan facility to finance the pubs-for-breweries swap between Grand Metropolitan and Elders. The borrower is Inntrepreneur Estates, owner of the Grand-Met and Courage pubs. Of the borrowings, £300m is to be repaid by September 30 1992, through the sale of 1,540 pubs. The margin on the facility is %, declining to % when the outstanding principal totals £1.6bn, then to % when the outstanding amount falls to £1.5hn and to % when the principal amount falls to £1.5hn and to % when the principal amount falls to £1.5hn and to % when the principal amount falls to £1.5hn and to % when the principal amount falls to £1.5hn and to % when the principal amount falls to £1.5hn and to % when the principal amount falls to £1.5hn and to % when the principal amount falls to £1.5hn and to % when the principal amount falls to £1.5hn and to % when the first supra-national institution to Metropolitan and Elders. The

supra-national institution to tap the sterling commercial paper market, with a \$250m facility arranged by NatWest Capital Markets. NatWest also said it com-pleted syndication of a \$29.25m;

8½-year senior debt facility intended to provide a portion of the financing for the man-agement buy-out of Fenchurch Insurance from its former parent, Guinness Peat Group. Intermediate Capital Group is providing mezzanine finance for the transaction.

Deutsche Bank Luxembourg said it completed syndication of a \$200m live-year revolving credit facility for Atlas Copco AB. The deal, deemed tightly priced by bankers, had met

Banks queue on the After 10 years growing up, Ecu sector comes of age

THE ECU sector of the Euromarket is one of the few to show any life this year amid a dearth of new issues in other currencies, some of which have been held back by the wild vol-atility that has dominated the European government bond markets.

in the first quarter of the year, the Ecu proved the fifth most popular currency in which to issue bonds, as 25 new Ecu bonds accounted for a dollar equivalent of close to \$5bn. This was an increase from the same period last year when 28 issues amounted to a value of \$2.84bn, putting the currency seventh in the league The resounding success of

the mammoth Eculbn issue for Italy, launched just over a week ago by Paribas, has focused attention on this sector of the market. The deal — the trading comfortably above its issue price late last week at 100.35 to 100.40. It had risen to 100.80 to 100.85 earlier in the week, slipping back with the slide in the German government bond market.

Italy's issue was followed last week with an Ecu350m deal for the European Commu-nity maturing in five years and with slightly tighter pricing which, as a consequence, met slower demand and was trading just outside its fees at less 1%-less 1% by the end of the

These two deals are a major development for the Ecu bond market, which after 10 years of growth is beginning to come of age as it attracts more institutional investors.

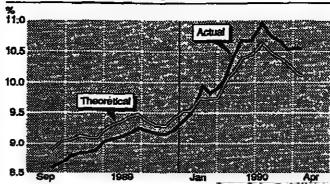

. In January, Swiss Bank Corporation researched investor attitudes to Ecu bonds and found that institutions were resisting involvement in the sector because of the lack of 10-year benchmark bonds. This has created a situation

in which European sovereign borrowers are falling over themselves to offer the market a benchmark deal. "These Governments are all playing a game to see who can create the next Ecu benchmark," says Mr Jim O'Neill, head of research at Swiss Bank, "but the truth is, none of them can because they don't issue them often

Nevertheless, the Italy Issue

adds important liquidity to the 10-year end of the market, which is a key part of attracting institutional buyers to Ecu. In a move that will add further depth to the longer end of the Ecu market, the French Treasury plans to offer

ECU 10-year bond yields

Ecu450m to Ecu550m of a 9.5 per cent 2000 domestic bond on Tuesday. This will be the second Ecu-denominated bond issued by France and forms part of the Government's intention to offer Ecu stock each quarter this year. The first issue, made in May last year, now has a total nominal

The Bank of England has been offering Ecu Treasury bills since October 1988 and Italy has also tendered short-term Ecu bonds. Spain is the latest European Government to announce its intention of selling domestic Ecu bonds as part of its commitment to

value of Ecul.88bn.

the EC, and market players say they would not be surprised to see West Germany and the UK move into the longer end in

The Ecu has proved its worth in the early part of this year as European domestic bond markets have experienced a turbulent ride with high volatility and wide prices. Swiss Bank says that a sign of the Ecu market's maturity is that it has stayed open throughout the wild times on the European government classed as a fully fledged European bond market. Institutional investors are

the next six months.

looking to move back into Europe after bailing out of the government bond markets amid the volatility at the beginning of the year. However, the German bund market is not looking as attractive as it has in the past, because of concern about the inflationary implications of unification of

swings in bund prices.

A lot of the institutional money coming back to Europe is taking advantage of the higher yields available in the French OAT market, where investors can make a 122-basis point pick-up in yields over the 10-year bunds. Also, since many investors regard the Ecu as a high yield D-Mark substi-tute, demand is overflowing into the Ecu sector.

the two Germanys and the wild

The yield on longer-term bunds is currently at 8.5 per cent compared with a 10.15 per cent on the 10-year synthetic Ecu bond created by Paribas. This compares with a yield of 10% per cent on the Italy deal. The high coupons on Ecu deals have attracted the attention of fund managers far removed from the traditional Swiss buyers of Ecu bonds. The market is developing a two-tier structure where the mainstay of retail investors

will concentrate on deals of

less than Eculoom, which they often hold until maturity, and institutional buyers will take bonds from the large, liquid

Many Japanese fund managers are fostering an interest in Ecu bonds and some are even

building portfolios of them. One of the constraints to, investing in Ecu has been the lack of a vehicle with which to hedge bond holdings, since no underlying bond is traded.

However, Matif. the French futures exchange, is consider-ing the launch of an Ecu bond futures contract this year based on the French Government's OATs in Ecu. A futures contract would supply a hedge for Ecu bond holdings and be a cheap and easy way to gain exposure to the Ecu market.

One enthusiastic trader pre-dicts that if the market keeps growing as it is now, volume could have increased fivefold

 Barings launched a £75m issue of bonds for Alliance & Leicester Building Society which was later increased to £100m. The issue carried a generous coupon of 14% per cent and was offering a 119 basis point pick-up over the 10% gilt of 1995.

Moody's considers downgrading Orix debt

By Stefan Wagstyl

MOODY'S, the US credit rating agency, is considering down-grading long-term debt issued by Orix, Japan's largest leas ing company, because of its exposure to the Japanese property market and the pressure of rising interest rates.

lows the sharp plunge in the Japanese stock market, which some analysts fear could spread to the property market, where prices have also risen very fast in recent years.

Moody's said it had put some \$250m of Orix's long-term debt currently rated at A3 under review for a possi-ble downgrade.

"Moody's considers Orix's aggressive development of real estate and international investment activities to be risk factors," the agency said. It added that it would study Orix's management of its assets and liabilities, after the recent increases in interest rates. Orix had consolidated assets of Y4,000bn (\$25.4bn) in

September.
Meanwhile, Moody's has issued a clean bill of health on the credit ratings of big Japanese banks. It says in a report that while the stock market drop and rising interest raptes will put pressure on bank earnings and property loans, the "fundamental strength of Japan's banks makes a system-wide adjustment of earnings unlikely."

The strength of Japanese banks is still on a par with their similarly-rated international peers. As such only

tional peers. As such only selective rating adjustments are likely, says Moody's. The agency has downgraded debt issued by Yasuda Trust & Banking, a leading trust bank, because of its exposure to property-related loans.

LAIDLAW Transportation, the Canadian waste management and school bus group whose six-month earnings were reported on Friday, reports in US, not Canadian, dollars.

Isabelle Gallimard sells stake in publisher to BNP

GALLIMARD, France's most distinguished publishing house, appears to have emerged from a period of frat-ricidal feed with Mr Antoine Gallimard in a strengthened position at its head. This follows the decision of his younger sister, Isabelle, to sell her 12.5 per cent stake to Banque Nationale de Paris (BNP), the state-owned bank which is one of Gallimard's principal

Antoine's quarrel with his brother Christian and his elder sister Françoise is still before the law courts. The lawsuit has carrying out plans to create a holding company, Sopared, to ensure his control over the publishing house.

He owns 33.5 per cent of Gallimard, although part of this stake is contested by Françoise and Christian. With the support of other members of the family and friends, who between them hold 18 per cent, and with BND's 12.5 per cent. and with BNP's 12.5 per cent, he now seems firmly in con-

The sale of Isabelle's stake to The sale of Isabelle's Scale to BNP heads off the possibility that an outside buyer, such as the building and television group Bouygues or Mr Robert

Maxwell, the UK publisher, could obtain a blocking 33.3 per cent minority by buying up the three stakes of Isabelle.

the three stakes of Isabelle, Christian and Françoise.

The price of the transaction was not disclosed, but is understood to be less than the estimate produced by bankers acting for Françoise Gallimard, who valued the whole company at FFri.85bn (\$325m).

Founded in 1911 by Mr Gaston Gallimard, the present owners' grandfather, the company's backlist includes some well-known names from French 20th century literature: Proust, Sartre and Camus.

Sell-offs boost Béghin-Say

By George Graham in Paris

BEGHIN-SAY, the French sugar and agricultural products group controlled by Italy's Ferruzzi, has reported net profits of FFr1.24bn (\$218m) in 1989, up 52 per cent from the

previous year.

Exceptional profits rose sharply to FFr660m from FFr372m in 1988, and should rise again in 1990. Beginn-Say last year agreed to sell its remaining interests in the paper companies Kaysersberg and Papeterie Beghin-Corbeham and the trading com-pany ATB for a combined total of FFr3.31bn, and the deals were completed in January.

Operating income in 1989 rose by a third to FFr2 22bn — or by 26 per cent compared with 1988 figures recalculated to take account of changes in the consolidation perimeter on sales 9 per cent higher at

The sharpest advance came in Beghin-Say's corn starch division, grouping the activi-ties bought in 1987 from Corn Products Corporation. Its contribution to group operating income increased by 73 per cent to FFr773m. The main sugar and alcohol division gained 36 per cent to FFr895m. The oil, proteins and animal

foodstuffs division fell back by foodstaffs division fell back by
7.5 per cent to FFr568m, but
the company declared that this
division "conceals a strong
potential for improvement."

Beghin-Say added that it had
made a provision of FFr120m
last year to cover future price
increases

• Moulinex, the French home appliances company, said that net consolidated profit after payments to minority interests totalled FFr153m in 1989, slightly below the FFr159m it reported in 1988. However, excluding exceptional items. net profit grew 23 per cent last year, Moulinex said.

Essilor ahead 7% at FFr313m

By George Graham in Paris

ESSILOR, the world's leading maker of corrective spectacle lenses, lifted net profits 7 per cent to FFr313m (\$55m) last

Mr Bernard Maitenaz, chair-

Mr Bernard Mattenaz, chairman, said the results were in line with the company's forecasts, though lower than some analysts had expected.

Pre-tax profits fell 5 per cent to FFr419m on sales 8 per cent higher at FFr4.7bn, largely as a result of foreign exchange losses, but a reduction in the overall tax rate allowed net

earnings to advance.
Mr Maitenaz said Essilor had
made one lens in seven now in

use worldwide. It suffered last year in West Germany and the UK, both markets where deregulation had led to a surge in demand in 1987 and 1988, and where sales had fallen off charnly lest year

sharply last year.
Sales progressed strongly in southern Europe and Canada. however, and more slowly in the US as the company re-organised its distribution sys-

The group has spread into nearby market segments, with a majority stake in Angenieux. the zoom lens maker, and hold-ings in Domilens, an optical impiant maker, and Christian Dalloz, a specialist in polycar-bonate safety lenses.

Olivetti and Philips lookat logic of computer links

Alan Cane on the European companies' discussions

he share price of Oli-vetti, the Italian office equipment manufacturer, rose and fell briefly last week on rumours, later confirmed, that the company was in discussion with the Dutch company Philips, Europe's largest electronics company, about possible collaboration.

The talks, Olivetti said

The talks, Olivetti said vaguely, were about possibilities of establishing "sectoral partnerships" in electronic components and printers. They were exploratory in nature:
"And when I say exploratory, I really mean exploratory," said a company official.
Industry analysts and observers, nevertheless, balleve that the talks could

lead to a much broader business collaboration, pointing out that both companies have made no secret of their anxiety to establish relationships of various kinds with their European companities. pean competitors.

"The question is not whether

Olivetti and Philips are in talks, but whether these are the talks," one analyst remarked.

The European computer industry is in the middle of

large-scale restructuring, accel-erated by the single market expected to arrive at the end of

European manufacturers have been handicapped by their insularity, their inability to secure adequate economies of scale and a lack of innova-

A report last week from the British Computer Society warned that the US, Japan and Pacific Rim countries were now ahead of Europe on pric-ing and productivity.

Olivetti and International

Computers of the UK, part of the STC group, are profitable, but Bull of France, Norsk Data of Norway and Nokia Data of Finland all lost money last year. Nixdorf was rescued by Siemens, its West German compatriot, after sustaining serions losses

Europe's trade deficit in computing, some \$12bm in 1987, is expected to reach \$17bm in

Leaders of the European industry, in consequence, are continually talking to each other and to their US and

companies need to rationalise

Asian competitors, exploring the widest possible range of ways of co-operating and col-laborating.

The result has been a spate

of rumours of mergers and acquisitions. ICL has been linked with Fujitsu of Japan or

linked with Fujissu of Japan or alternatively with Olivetti, which has similarly been rumoured to be linking with Toshiba, also of Japan.

The idea of a deal between Olivetti and Philips gains cred-ibility because of the openness with which the two companies have been advertising their have been advertising their interest in new partnerships and the industrial logic which would underlie collaboration.

Mr Cor van der Klugt, Phil-ips president, hinted strongly last month that Philips might take over a computer company this year. Mr Dick Sniiders, a senior member of Philips' staff, told analysts last week that Philips was committed to the computer business and that they should not expect 1990 to pass without a deal being car-ried out. Substantial funds, sufficient

to make a difference to the company's financial perfor-mance, had been sarmarked to finance either an acquisition or

nnance either an acquisition or a joint venture.

Mr Vittorio Cassoni, Olivetti managing director, has repeatedly said that the only hope for the European computer industry is a measure of rationalisation and, as a leading player, Olivetti would expect to take a full part in that process. full part in that process. He said he was open to a complete range of deals, from

mergers to cross-marketing arrangements.
Olivetti warned, however, that after the collapse last year of its reciprocal small com-

of its reciprocal small computer marketing agreement with American Telephone & Telegraph of the US, its approach would be cautious and prudent.

Analysts say that, of the remaining large European computer manufacturers, only ICL and Olivetti would be a suitable partner for Philips and that there would be more

suitable partner for Philips and that there would be more industrial logic in an approach to Olivetti.

Philips, with sales last year of about \$31bn, has failed to make much of an impact in the young world of computing, aspecially in personal computants.

Olivetti, on the other hand, with sales of \$8bn last year, is Europe's most successful small computer manufacturer. It has been hit badly, however, by the shrinkage in margins caused by the declining cost of computer technology, which is affecting every computer man-ufacturer. It is attempting to regain the initiative through a new family of powerful work-stations based on open

P hilips would therefore gain a proven microcomputer division, a captive outlet for its semiconductor products and Europe-wide personal computer marketing channels through a deal with the Italian company. Olivetti would gain a financially stable, larger pariner, and access to Philips' technology and mar-

keting network.
Mr Laurence Heyworth, senior analyst with Flamings in London, argues that the dis-tinction between personal com-puters and high-definition tele-visions will fade both in terms of components and functional-

"There would be a strong case for the integration of Kurope's leading television [company] and its leading personal computer company," he

says.

Much depends on the mood of Mr Carlo De Benedetti, the Italian financier. His company. CIR, holds 40 per cent of Olivetti's voting shares.

Dissident Getty fails to impress Aquascutum

AQUASCUTUM, the classic clothing company, is not sents the family interests of maintenance impressed by the news that its Brian Myerson, an expatriate dissident shareholders include could be company. South African financier. Clients of Global Asset Management AQUASCUTUM, the classic phony Capital, which repre rumoured enfranchisement the world's richest men.

A spokesman for the com-pany said: "We welcome him as a customer but cannot see what he brings to a team already short of retail experi-

Mr Getty, youngest son of the late J Panl Getty, has taken a 33 per cent stake in Waterfall, a newly-formed company which is seeking to enfranchise non-voting share-holders in the outfitter, claim-ing it has been stilled by family control. So far it has spent over £9m on acquiring 27.2 per cent of Aquascutum's restrict-Another 38 per cent of Waterfall is controlled by Sym-

business, own 27 per cent and the rest is controlled by the Oceana Development Investment Trust, acting for the Lewis retailing family in Cape

In a letter to Aquascutum shareholders at the weekend Waterfall sought support for its plan to wind up the com-pany and appoint liquidators if the controlling Abrahams family does not agree to franchise the 'A' shareholders and allow Mr Myerson and Mr William Dacombe, a director of financial adviser Campbell Lutyens Hudson, to be elected to the board at the annual meeting in

sents the family interests of Mr proposals which Aquascutum might itself put forward: "If the board proposes compensa-tion terms which are overge-nerous to ordinary sharehold-ers, we will certainly use our position to block those proposals. This we are able to do because we speak for over 25 per cent of the 'A' shares and any proposals of this nature will require the approval of holders of at least 75 per cent of the 'A' shares." of the 'A' shares."

Aquascutum has responded to the Waterfall challenge by appointing as non-executive directors Mr Philip Birch, who played a large apart in Ward White's transformation into a major retailer, and Sir Peter Carey, currently chairman of Dalgety, the food and agricul-tural products group, and a for-mer chairman of Morgan Gren-

June. Mr Myerson said of

D-day for the California roadshow

Nikki Tait on the legal wranglings over Axa-Midi's attempt to buy Farmers

fountains splashed and plano music tinkled in a plush downtown Los Angeles hotel, a couple of partners from the New York law firm of Cravath, Swaine & Moore raised their glasses to a good day's

Representing Farmers Group, the US insurance sub-sidiary of BAT Industries, they had just chomped their way through two of the main witnesses put up by Axa-Midi Assurances in a Californian insurance department hearing. Axa, France's third largest

insurance group, was - and is - seeking permission in nine separate states to buy Farmers from Sir James Goldsmith's Hoylake consortium, should the latter make a successful hid for BAT.

The lawyers had utilised all the tricks of their trade. Watches, for example, were elaborately laid out, as time-restricted cross-examination began and then pointedly perused when answers exceeded two sentences, and questions fired at frightening speed.

But the net effect was still, in the lawyers' view, highly satisfactory. "The art of cross-examination," purred Mr Ron Rolfe, an indefatigable figure who heads the Cravath effort, "is control."
Today, the results of that

performance will be known. At

mid-afternoon, California time, the state's Insurance Department will deliver its ruling on whether Axa, via the Hoylake sale arrangements, would be a suitable owner for Farmers. Ironically, none of the main players will be in San Fran-cisco to hear the news. They will be back in a hearing room for the umpteenth occasion since the process began, on this occasion in Texas. Lawyers, PR advisers and witnesses from both sides started winging their way towards the Lone Star State last week - a regular roadshow which has surrounded each set of pro-

ceedings.

Although Axa and Hoylake need clearance from all nine states before a new bid for BAT can go ahead, the Califor-nian decision is important for two reasons. First, this is Farmers' home state, from which it derives 40 per cent of its business. Second, California has a sizeable and highly professional insurance department, well able to assess the financial arguments which are at the nub of the matter.

For whatever professional satisfaction was derived from the hearing-room shenanigans, the key issue is one for cool, commercial assessment. Will Axa's acquisition funding structure, which involves a ten year loan of \$2.25bn to be repaid by dividends from

Warren resigns

Farmers and \$2.25bn of two-tothree-year money to be repaid from the sale of the French group's non-insurance assets. pose any threat to Farmers'

xa says no, pointing to "spare" assets within assets with the higher yes, claiming that the higher dividend take and certain tax changes implicit in the French proposals would be seriously detrimental. It has also cited California's own acquisition guidelines on post-purchase gearing ratios, prompting a dispute over goodwill accounting

Meanwhile, background fac-tors may also weigh in. There is the rumbling issue of Propo-sition 103, the Californian insurance rate reform initiative, which the state is strug-gling to implement and which in theory at least - could pose financial constraints on local insurers in the future.

The Californian hearing, moreover, coincided with the collapse of Drexel Burnham Lambert, emphasising US con-cerns about the leverage cul-ture. And then there is the Goldsmith connection. Farmers' attempts to throw doubt on the Axa sale agreement have not been particularly con-vincing, but the fact remains that Axa proposes investing

\$1bn in Hoylake itself.

As a result, both parties expect the California judgment to be lengthy; 40 to 50 pages is the guesstimate. And although the actual upshot could be a straight yes or no, the betting is on some form of condition decision.

What happens then? No-one is keen to predict their next move, until all the details have been thoroughly chewed over by their innumerable legal advisers. Nevertheless, both parties have, in the past, indi-cated that California's decision would probably be appealed if

it goes against them.
In the meantime, decisions from some further states may come through; Idaho, held up while a key official takes a holiday, reckons the end of April, and the Illinois record is now

due to close on May 2.
In this highly unpredictable process, only one thing is certain. As a BAT team bunkers down in London's Victoria and arrangements are under way to keep the Hoylake principals informed, the inter-continental the early hours of tomorrow

Synapse chairman stands down

SYNAPSE Computer Services, which installs software for IBM mainframe users, has announced the resignation of Mr Bill Williams, its chairman

and chief executive.

The USM-quoted company swung from pre-tax profits of £463,000 to losses of £249,000 for the six months to January 31.

Mr Williams had blamed much of the turnaround on exceptionally adverse trading condi-

Mr Williams said: "I have decided to pursue personal interests, which my current responsibilities at Synapse have precluded. Also to make way for the new structure that is necessary for Synapse to achieve its goals."

GrandMet to cut stakes in French groups

UK drinks and foods group, will cut its stake in French cognac distiller Remy Martin and in Remy's partner com-pany, liqueur maker Colntreau, to just over 20 per cent in both

GrandMet said in a joint statement, issued with the French groups, that it would back to the Heriard Dubreuil and Cointreau families which

will hold 80 per cent in the two groups via their Cointreau et Cle holding company. In January, GrandMet's wine

and spirits unit International Distillers and Vintuers bought 49 per cent in Remy and 19 per cent in Cointreau from a Coin-treau family member, Mr Max Cointreau.

Remy and Cointreau agreed to merge late last year and completed the deal in March.

This advertisement is issued in accordance with the regulations of The Stock Exchange. It

GrandMet said in January that it planned to sell part of its recently-acquired stakes to the new Remy Martin-Cointreau partnership once the merger

was finalised. The statement also said that all disputes among the family groups had been settled. It was the decision by Remy Martin and Cointreau to merge their activities last November which prompted Mr Max Cointreau to sell his holdings.

WSP rises 49% as two purchases double its size

WSP HOLDINGS, WSP HOLDINGS, the acquisitive engineering consul-tancy, has unveiled record results for 1989 and two further acquisitions which will double its size, writes John Murrell. The company is also propos-ing to graduate from the USM

to the main market. The 12 months to end-De-cember saw turnover rise from 23.42m to £5.17m and profits at

the pre-tax level advance by 49 per cent to £966,000. From earnings of 8.8p (6.6p) shareholders are to receive a final dividend of 1.5p making a 2.4p (2.1p) total

The acquisitions are of Donald Rudd and a 71.5 per cent interest in Parsons Brown, both consulting engineers. WSP has an option to acquire the remaining 28.5 per cent of Parsons Brown during 1991.

Aggregate initial consideration for the two companies will be £1.86m, with further deferred payments up to a maximum £1.81m.
Funding will be via a combination of new shares and cash. WSP will issue 2.82m new shares of which 742.893 will be the share element of the initial consideration. The balance of 2.08m shares will raise some

£1.62m net. Gilbert Eliott Corporate Finance is arranging a placing and open offer of 2.08m new shares at 97%p. Existing share-holders will be able to apply for the new shares, free of expenses, on a three-for-ten

For the year to August 31 1989 turnover and adjusted profits before tax of Parsons Brown were £5.17m and £172,575 respectively. Net assets totalled £688,131.

Donald Rudd had a pre-tax profit of £79,706 and a turnover of 23.2m for the 12 months to end January 1990. Net assets to be acquired amounted to

from Rex Williams board By Jane Fuller

Mr Frank Warren, the boxing promoter who was shot in the chest in November, has resigned from the board of Rex Williams Leisure, the video and entertainments

Mr Warren, who was chairman, has not played an active part in the company since the

shooting. His replacement is Mr John Botros, his partner in Loxway which owns about a quarter of

The board also confirmed Mr Jeff Williams, who is no rela-tion of the snooker player from which the company gets its name, as chief The shares have been

suspended since last Wednes-day pending an announce-ment. The company has been in discussions over a large Injection of assets. Negotiations about the

restructuring have been among the factors holding up the production of its annual report and accounts for the year to May 1989.

Hillsdown sells

furniture and property group, tionery business to Nora Industrier of Norway. The price is understood to be around £8m-£9m, although the

Hillsdown acquired the Grimsby-based sweets business in late-1985, via a £3.45m cash bid. Last year it sold another of its confectionery interests, Bluebird, and the Needlers disposal takes it out of this market entirely.

The business has been bought by a subsidiary of the Norwegian conglomerate, which already makes sweets in Scandanavia. This represents its entry into the UK market.

MONEY MARKETS

Australian dollar

UK clearing bank base lending rate 15 per cent trem October 5

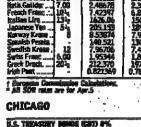

However analysis suggest that a further reduction of % to 1 per cent may take place in two or three months, but are worried that the outlook does not look particularly favourable for the economy or the currancy. the currency.

The Australian dollar pushed up towards 77.00 US cents on Friday, from 75.40 cents at the end of the previous

HATIONAL AND REGIONAL MARKETS

Norld Ex. UK (2074). World Ex. So. Al. (2321)... World Ex. Japan (1927)... Australian economy has allowed the authorities to cut interest rates, the slowdown has come in the wrong areas. Fourth quarter national accounts showed a fall in Gross Domestic Product, but private consumption rose and

capital expenditure fell.

He thinks that the authorities are playing a high risk game with the Australian dollar, Inflation is threatening to rise and international international descriptions. interest rates are unlikely to follow the Australian example. He suggests the local currency may slide to 71.00 US cents within three months and could even go lower.

BANK OF ENGLAND TREASURY BILL TENDER

CROSSWORD

No.7,210 Set by QUARK

ACROSS

1 Derby, with leader dropping out, an upset; could be close (6) 4 Could produce drop in per-formance (4-4) 10 Somehow attunes to a com-

plaint (7)

11 Using money - no capital left in the balance (7)

12 They're often involved in a row (4)
13 Mug holding a view relating

to separation (10)

15 Girl - a graduate, and lively (6)

18 One collecting things loses first two, becoming seeker of retribution (7)

20 See 2 Seed 24 (7)

20 See 3, 6 and 24 (7)
21 Catch? One would be held when under it (6)
24 At 20, where the competition may be in tents! (6,4) 26 One of two of the best wines

supplied by Lear? (8)
31 Accommodation limited? (6)

Apr 6 Mar.30

1<u>2</u>4

+1₀

28 Watery compound producing dry heat? (7)
29 One officer after a drink goes for walk with supports (7)
30 What accompanies stuff

30 What accompanies stuff

DOWN Relating to race? (8)

2 Later consequences follow-ing study of numbers in America? (9) 3 Insult built up on heads

from 20? (4)

5 Rescue from wriggling viper in short grass (8)

6 They're not so young at 20

(10)
7 Constellation hunter (5)
8 Feast with English beer coming up (6)
9 Echo-sounder in man-of-the-sea's dictionary (5)
14 Doctor's developed medicine

finally, at a cost (10) 17 Diesels we adapted in the

plant (9)
18 Make one's mark repeatedly

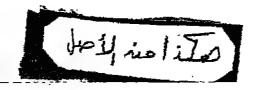

(8)
19 Refuse to agree project (5,3)
22 Asian dog blanket (6)
23 Plant that gets regularly worn out (5)
25 Could describe times when gilt dropped first (5)
27 Some rumour getting to press (4)
The solution to lest Saturdes's press (4)
The solution to last Saturday's
prize puzzle will be published
with names of winners on Saturday April 21.

significant upheaval is under way in Brit-ish research and

ish research and development. It is evident in the UK Atomic Energy Authority, now known as AEA Technology and looking to pay its way by selling technical advice around the world; in defence, where R&D will soon be run as a quasi-commercial

agency: in agricultural R&D and in universities. The man behind these changes sits in an

office just a wall away from the Prime Minister's.

Sir John Fairclough, the British Government's chief sci-entific adviser for the last four

years, is an outsider. Previous occupants of the job tended to be viewed by the academic sci-

ence community as its voice in the Prime Minister's ear. But

Sir John is not a fellow of the elite Royal Society, nor does he have an academic background.

Rather, he is an engineer, the first of his profession to serve

in the post. And it is with an

engineer's eve to economics

that he has approached the job. Sir John would not claim to

the Government's approach. When he was recruited in 1986,

the broad lines of its approach to science had already been

set. But his four years in the

Cabinet Office have been marked by a substantial shift of scientific resources. The

Government has become much more choosy about what research it will support, leav-

by many in the science com-

munity for failing to fund academic science as generously and as uncritically as they

Needless to say, the Govern-ment has stuck to its guns. It

was convinced - not only by Fairclough but also by his pre-

decessor - that it would never get changes unless it withheld

funds from "obsolescent"

research.
Fairclough's background is

in electrical engineering and

the computer industry, specifi-cally IBM. The groundwork for

his role in Whitehall was laid

by Sir Robin Nicholson, a met-allurgist also recruited from

antirgist also recruited from industry. Rebuilding the job from 1982 after an eight-year lapse during which it had been unfilled, Nicholson enjoyed one

of the closest relationships

between any Prime Minister

and chief scientific adviser. Fairclough took over in early 1986 on secondment from IBM

after being headhunted by

The virtue of 'values' statements

ANY EUROPEAN company which issues a "vision and val-ues" statement to all its employees and also to the press can expect either polite smiles of disbellef or loud chortles of cynicism.

Brief vision (and "mission") statements are quite common in Europe these days and sepa-rate codes of ethics are also becoming popular. But longer expositions of the corporate values which underlie such missions are few and far between. Most Europeans still see them as just another part of the needless hyperbole with which American business sur-

Yet properly handled, the formulation of a values statement, together with tangible evidence that managers are putting it into practice. can greatly benefit a company's cohesion and morale, its speed of action and external reputa-

The best-known example of the way a values statement can energise a company is that of Johnson & Johnson, the American health and household products group, which suffered in 1982 from criminal poisoning of a small batch of its Tylenol pain-killers.

Customer trust

The speed and openness with which staff reacted at every level of the company, in some cases taking action before being told to do so, was widely attributed to the consultation process surrounding the J&J "Credo": a values statement which its chief executive had spent several years debating with thousands of

One result of the company's impeccable behaviour over Tylenol was that it actually increased its customers' trust. The product's brand leadership was quickly rebuilt in the face of extreme scepticism among marketing experts.

In contrast, Perrier's marketing platform of naturaln and purity seemed insufficiently instilled into its managers' minds for them to move as quickly in this February's benzine contamination disaster. Perrier's change in expla-nation of the cause of the problem did not help protect its reputation, nor did the impression it gave of lessthan-complete openness. It is now being sued in the US.

BP's need to get everyone acting in step - and fast - in the event of a disaster such as February's oil spillage in California was only one of the motives behind its new threepage vision and values statement. It was promulgated as part of the new chairman's attempt to change the company's culture from bureaucratic and risk-averse to open and quick on its feet.

Employee views

The statement was issued debate which involved only top management and a small group of advisers. But the document does reflect many of the views expressed by employees over the past year in an exten-Sive process of questionnaires and interviews about BP's structure and culture.

The statement, in the form of a list of responsibilities to "stakeholders" (employees, customers and suppliers as well as the wider community and shareholders), builds on the staff's strongly-expressed wishes that BP should: stop neglecting their personal interests and development; communicate its strategy more clearly; and be seen to be raising safety and environmental standards.

The statement is a slightly awkward amalgam of BP's existing values (and ethics) with new ones which it hopes will lift corporate behaviour in the near future.

This, and the way the document was circulated so quickly, has provoked some scepticism within BP. But the management's reaction has been far better than at other British companies which, several years ago, rushed into grand declarations of intent. such as "the ICL Way," which at first were purely top-down.

Whether BP's lead will spark a "corporate values" movement in Europe remains to be seen. A flood of statements of empty intent would be fatuous and harmful.

But an outburst of more openness and realism vis-à-vis employees, customers and the wider community could only be to the good of European

MONDAY INTERVIEW

Engineer of change in R&D

David Fishlock speaks to the Government's chief scientific adviser. Sir John Fairclough

and development that summer, setting out the Government's new strategy, proposed sweep-ing changes in the management of government-funded R&D, with the Prime Minister herself in the driving seat via a

new Cabinet committee. For the first time Britain expert committee advising on the whole spectrum of science and technology. Money saved in areas of diminishing national interest would be moved to areas judged to be of ing more mature projects to find private funding. Throughout his term in office, the Government has also been relentlessly criticised

higher priority.

"And it's happened," he says. "Although the re-direction took a little longer than I'd have liked."

PERSONAL FILE

1930 Born, Yorkshire 1957 Joined IBM (US) 1964 Director, IBM's Hursley Laboratory 1967 Director, IBM's Raleigh

Development Laboratory 1983 Chairman of IBM (UK) Leboratories Ltd and an IMB (UK) director

1986 Chief Scientific Adviser 1987 President, British Computer Society 1990 Knighted

As Sir John sees it, Britain's underlying problem is that it has been trying to ignore the "globalising" of technology which has been gathering pace over the last 20 years. He says the aerospace and chemical industries know all about it but British engineering firms generally have falled to catch

Once many UK companies Nicholson, An early task, he recalls, was to give evidence become aware of the daunting scale of R&D investment now needed to be world-class - for before the House of Lords' Select Committee on Science and Technology, investigating example, in any significant secthe scientists' complaints ply buy in technology. He says this is a soft option. "At the Its critical report on national science policy was published early in 1987 and Sir John end of the day, unless you have something superior in hard-ware, you really are vulnera-ble." began drafting the Government's reply. The resulting White Paper on civil research

The new government R&D strategy aims to encourage companies to get back into innovative technology in several ways. For example, it puts a lot of faith in strategic alliances with overseas firms to share R&D costs. Even a multi-national will have difficulties pioneering alone a technology such as a new material, as some have discovered with gallium arsenide, a potential suc-cessor to silicon for micro-elec-

cessor to sincen for interoceas-tronic chips.
Sir John views Eureka – the European R&D programme involving 19 nations and a total commitment exceeding 55bn – as an important factor in forging new European industrial alliances. When he came to office, Eureka was lit-tle more than a bold French idea for a European counter-measure to the US Strategic Defence Initiative ("Star Wars") programme, which was

wars') programme, which was promoted as having considerable civil spin-off potential.

Britain, he says, has been very influential in shaping the present Eureka programme, with its light management touch and its potential for producing strategic commerced. producing strategic commer-cial alliances out of the initial R&D collaborations. "It could have quite an influence in broadening the perspectives of our engineering industries," he

Eureka works because its rules are simple, he says: "You just need a target bigger than a national opportunity.

Sir John also has great faith in Britain's new inter-disciplinary research centres, with a 10-year horizon for trying to exploit some new discovery such as room-temperature super-conduction. Seventeen of these centres have now been announced.

Sir John came to Whitehall with a strongly industry-ori-ented view that "the boundaries between classical subjects really do get in the way of industrial problem solving." He expressed this biss to Professor Sir David Phillips, the Oxford

don who chairs the advisory board for the research councils, the agencies through which academic science gets much of its funds. Prof Phillips said he believed some of the most exciting opportunities for science lay at the boundaries of the classical subjects. Sir John had found a powerful ally for change in a world notori-ously resistant to it.

He sees the IRCs as vital agents of change in redirecting the nation's R&D. But he admits mistakes have been made in giving too much publicity to competition between universities to bost IRCs and too little attention to the

importance of getting the right research director.

He is convinced the Medical Research Council had it right with its long-standing policy of picking a good man and backing him with enough cash to set up his own research unit set up his own research unit whenever a new opportunity appeared. "The Medical Research Council looks for he says. The model for every IRC, he believes, should be its Laboratory of Molecular Biology in Cambridge — "probably the most exciting laboratory Ive ever been into."

The IRCs have elicited mixed reactions from the academic community. Sir John has tried to establish that he does not want all university research done this way - "that's clearly a nonsense" - but he believes universities which are failing to attract an IRC may well be

his sternest critics.
As to how many IRCs the Government will fund, he believes the science commu-nity itself will discover there are natural limits.

Many academics have never wavered in their view that the Government should simply provide more money without strings (like an IRC) to pursue what is undeniably a nighly successful national investment overall in science. But the Government was seeking a closer correspondence between the science base and its economic

Sir John's view was that nothing would change if scien-tists continued to get enough funds to continue the work they were doing, regardless of any potential utility. He prod to the Prime Minister that the Government should review departmental investment in sectors such as agriculture and energy.

The Agricultural and Food Research Council has dramatically changed in the last four years. Its new £150m R&D programme has a longer-term and more international flavour, featuring the genetic engineer ing of crops among other things. Moreover, as one of its executive professors points out, "we are spending more on science and less on overheads." It is not only academic sci-

ence that has come under Sir John's scrutiny. UK AEA had more than £400m to spend a year and was concentrating on engineering R&D in support of the nuclear industry and on developing the fast reactor. Sir John instigated another depart-mental review, and the Energy Department reported in 1988 that the Government was that the Government was spending more than £100m a year on the fast reactor with no customer in sight for perhaps 20 or 30 years. It decided to are the mission during the 1990s. This precipitated a reorganisation of the 35-year-olf R&D agency, which took effect this month.

Sir John accepts that he is

Sir John accepts that he is widely blamed for the fast reac-tor decision. It is the price of trying to be an independent assessor of R&D rather than

the sponsor the scientists would prefer. He claims he found fast reactor technology "very persussive indeed." He would now like to see an

He would now like to see an international appraisal of nuclear reactor safety as thorough as the Sizewell B public inquiry. He believes this could conclude that the fast reactor is the safest (even if the most costly) of present-day systems. What the Government has come to recognise during the 1980s is that a lot of society's present problems are caused by science, which must therefore be encouraged to bein find solutions.

actutions.

The environment is a classic case in point. Sir John cites current worries about possible climatic and atmospheric

climatic and atmospheric changes. More powerful mathematical models; involving years of expensive research, are needed before reliable forecasts can be produced. And that will increasingly be the focus of Government-funded and other R&D.

Str. John believes that when he retires from Whitefall later this year his successor will most likely be recruited from the anvisonmental sciences. It

would be a fitting sign of the

SEPARA

The state of the s

A chance for basic prison review

he siege at Strangeways Prison was entirely predictable, not just because the prison staff had been warned of imminent disruption at last Sunday's chapel service, but because of deep-seated and long-unresolved issues in social philoso-phy, penal policy and theories pin prison administration. The immediate task for Lord

Justice Woolf will be to unravel the complex causes of the human explosion among prisoners frustrated by their custodial condition and alienated from the community outside. The Chief Inspector of Prisons, Judge Stephen Tumim, recently issued a characteristically forthright report on Strangeways which has been struggling to overcome the effects of persistent over-crowding. He pointed to the underlying problems of the prison service, particularly as they impinge on a local prison the inmates of which include long-term prisoners, dangerous offenders, segregated sex-offenders, less serious property offenders, and a constant flow of unconvicted prisoners on

At the same time, Judge Tumim acknowledged the efforts of an outstanding prison governor in coping with these disparate elements within the prison population and in providing new facilities to relieve their boredom. The taunting by some prison officers of the prisoners on the roof of Strangeways indicates there is more than a hint of occupational failing within the

ranks of the prison staff. The Home Secretary is to be congratulated for his immedisetting up a judicial inquiry. Ever since the inquiry in 1932 into the Dartmoor disturbances by Mr Justice du Parcq - which recommended the closure of that 18th-century prison - the prison service has repeatedly consumed its own smoke. Internal inquiries and reviews of riots and major disturbances in a number of penal establishments over the years JUSTINIAN

public attention and reform. Experience among prison administrators invariably tells of "tension" and "alienation" increasing greatly in the weeks immediately preceding prison disturbances. Lord Justice Woolf would do well, therefore, to look beyond the identification of a particular type of pris-oner the prison staff regard as troublesome or as posing management problems. It is the inmate culture and its environment that may provide the

public inquiry that commands

clue to prison eruption. In interpreting his terms of reference, Lord Justice Woolf has a golden opportunity to review all aspects of penal pol-icy. For the last two decades, discussion about the penal sys-tem has been more about practical and economic considerations than about the sentencing of adult offenders and penal policy. The operation of the parole system and the adjudicatory procedures for dealing with the most serious offences in prison have, for example, occupied a lot of

prison administrators' time. Although the aims of the prison system have been debated endlessly by penal reform groups outside government, the overriding preoccupation of penal policy within prison administration has been to find ways to reduce a grow-ing prison population. Only in the last year has there been any substantial relief in the numbers of prisoners inside, and most of these have been among the young adult offend-ers. Otherwise, there has been a relentless trend upwards

The main means of attempting to reduce the size of the prison population has been an exhortation and cajoling of the Judiciary by the Home Office to award fewer and shorter sen-tences of imprisonment for all offenders, except those committing the very serious offence and for the small number of dangerous offenders. The judicial response has been puny. The prison service will be able to cope only if and when the prisons can be half-

Whatever the aim of sentencers - and they need to be curbed in their adherence to traditional tariff sentencing it is an axiom of modern penal policy that offenders are sent to prison as punishment, and not for punishment. Inhuman or degrading treatment within prison has no part to play in the regimes and patterns of prison life. Yet the conditions in which prisoners have to live and work fall well below the European Standard Minimum Rules for the Treatment of Prisoners.

Slopping out is the chief, but not the sole, intolerable feature of prison existence. The absence of human choice in daily life, the lack of human tenderness in a rough community divorced from family life and the forced companionship of fellow prisoners all add up to an unhealthy mixture of miscreants and misfits in a closed institution.

The demonstrated failure to rehabilitate and reform prisoners has not been replaced by a wholly adequate substitute. The prison service itself has adopted an alternative model of humane containment, but that has not been sufficiently positive to command general acceptance, or even to ensure practical application.

The life of a prison should be as close as possible to normal life outside, subject to the demands of security, which are now given far too much emphasis. The orderly running of these establishments will be constantly undermined so long as there is overcrowding.

APV made good progress in 1989. Substantial increases were achieved in pre-tax profits, earnings per share and dividend per

The company continued to seek a more balanced spread of sales, both sectorally and geographically. The changing political scene in the USSR and Eastof further demand for APV's products. North and South America account for over a quarter of the company's business. Consequently, APV is placing strong emphasis on developing managers with an international perspective.

Although high interest rates are dampening the plans of some UK customers, APV enters 1990 with a record order book well-spread geographically, and across all product categories. The world-wide nature of its business means that APV can be modestly optimistic.

Continued growth underlines world-wide leadership in food processing

To revitalise the region and remain in competition with Tokyo as a beacon for talent and centre

for finance, Kansai has embarked on more than 500 "big projects."

Robert Thomson looks at the effect these are likely to have in boosting morale and the local economy

A fanfare of 'big projects'

AT A recent press conference in Osaka, Mr Osamu Uno, of the Kansai Economic Federation, spoke of to make compromises hard-the region's responsibility for won. Osaka is the most prone "vitalising the world economy" to compare itself to Tokyo and and cautioned that "Tokyo does not represent the whole of Japan." On finishing the speech, Mr Une smiled and apologised for having to leave the sathering early because of the gathering early because of an appointment in Tokyo."

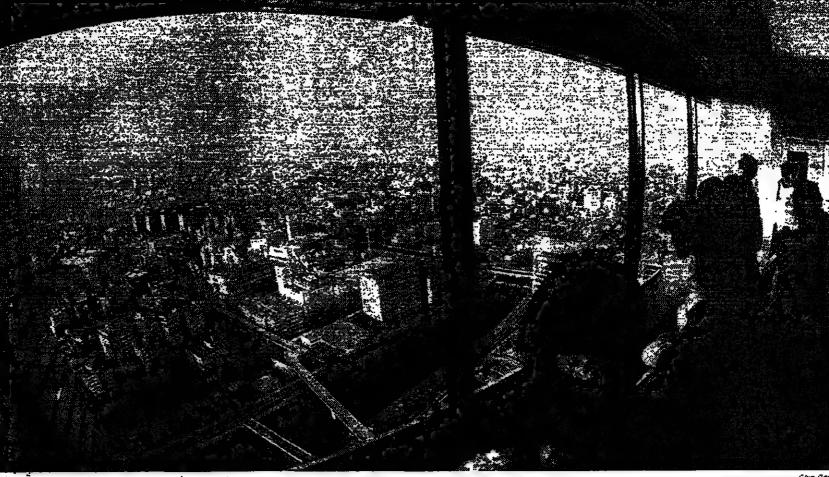

Tokyo's role as a centre of international finance and as a beacon for talent throughout Japan has provoked a rise in Kansai consciousness. The. growing international stature of the capital city highlighted Kansal's stagnation, and prompted region-proud companies and governments to devise ways to push the local economy out of Tokyo's

Kansai's attempts to collect its thoughts have been made difficult by the diversity of the six prefectures that comprise the region. For a start, some officials say that there are seven prefectures, and include Fukul in the family, and others suggest that there are even eight. But a majority agrees that Osaka, Hyogo, Kyoto, Shiga, Nara and Wakayama make up the Kansal.

The strong characters of three most prominent cities Osaka, Kyoto and Kobe, tend has an enduring self-image as the country's economic centre. Until recently, Kyoto has been content to trade on its status as a city of relics, with tourism as virtually the only growth industry. Kobe likes to think of itself as a city apart, separated by colourful history and cosmopolitan character from Osaka, although there is only 30 minutes by train between

Together, the prefectures and cities and their 20m people are a formidable region. The Kansai has a gross regional product about the same as that of Canada's GNP, while the textile industry produces 32.7 per cent of the Japan's output, the steel industry 25.9 per cent, and machine tool industry 23.1

par cent. The region has produced an impressive cast of companies with strong international images. Matsushita, Sanyo and Sharp, the electronics groups, are old Kansai companies, as is Sumitomo, one of the most powerful keireisu, the corporate groupings identified by

A pappramic view of Osake

Washington as a "structural impediment" to trade with

Japan. Young and ambitious companies have emerged from a corporate culture renowned for its canniness and innovation in manufacturing but which also has a tendency to do commercial things in the time-honoured way. Osaka officials are attempting to convince small business managers to end the tradition of physically collecting debts two or three times a month -the hope is that an increase in paper shuffling will lead to a decrease in traffic congestion.

Kyocera, formerly known as Kyoto Ceramic, has become the world's largest producer of ceramic packages for integrated circuits. And a collection of the country's leading apparel companies has settled together in Fashion Town, on a man-made island off Kobe.

But these flashes of

initiative did not change the broader perception that the region was in need of revitalisation, and so, showing a central planner's love of awesome and expensive steel works or dams, the region has devised the "big projects" -the English words have passed into the Japanese language.

KANSAI

About 566 projects are under planning in the Kansai area, with 358 of them having a total budget of Y22,000bn. Many of these projects are small, but the "big projects" are genuinely big. Kansai International Airport, intended to be Japan's first 24-hour international airport, is to cost Y1,000bn (£410m) in its first

phase, while related projects are said to be worth Y2,850bn. Then there is the Kansai Science City, 15,000 hectares of interdisciplinary potential that could, according to Mr Uno, "solve the world's and humanity's most pressing problems." The first problem solved was where to put the facility, as each of the prefectures wanted at least a fair share. A tract of land straddling the prefectures

of Osaka, Kyoto and Nara was Hyogo prefecture has backed the building of the world's longest suspension bridge, the Akashi Kaikyo Bridge, as part of a link between Honshu and

Shikoku Islands. And the ambitious \$2.75bn Inter-national Garden and Greenery Exposition (Expo '90) has just opened in Osaka, although organisers are worried that a spate of exhibitions in Japan in the past few years has dulled the lustre of the event.

Mr Kenichi Ohmae, chairman of McKinsey and Co Japan, moved office from Tokyo to Osaka because of his faith in Kansai, but he has doubts about the long-term worth of the "big projects." The question, he says, is where will Kansai be when all of

these projects are completed?
"If you look at the figures, this is going to be one of the world's most intense centres of activity. Companies are sponsoring these projects, which means there is tremendous confidence in the Kansai. Some people will certainly get rich. There will be employment, and the outlook is generally for a prosperous 1990s," he says.

that people's lifestyles will not change. There is no grand design to all these projects, and there is a lot of competition among the prefectures. The projects are very ego-oriented. They use Tokyo as the model for everything. If Tokyo has a fashionable department store.

Osaka wants the same." Kansai officials are very conscious of these criticisms. They are aware that the the ideal would be for the region to develop its potential as a gateway to East Asia and the western Pacific, but the urge to turn the head eastwards for a look at Tokyo's progress is irrepressible. And, uneven as the contest is, an ambition lingers to top Tokyo, and to regain recognition as the pre-eminent economic centre.

Mr Hironari Masago. president of the Osaka Chamber of Commerce and Industry, likes to divide the many and varied projects into

"hard" and "soft" events, with the soft being of the conference kind and the hard leaving a tangible trace behind, such as work on transport infrastructure for the greenery

exposition. Kansai officials had been waiting for Tokyo's much touted decentralisation to take place, and a few years ago, cities in the region thought that they could be chosen to be a new capital, if, indeed, the title was taken from Tokyo. Those thoughts have long gone, and the talk now is of a Kansai (ederation with far greater control over its own destiny.

That desire has been heightened by problems that local governments have had in winning approval for their projects and in obtaining funds. For instance, governments are annoyed that central ministries and Tokyo-based politicians are not more forthcoming with money for the second phase of the Kansai

Mr Masago says that "Kansai is like the European Community" because "places like Kyoto and Nara still maintain their characteristics. and, like the EC, we would like to make the most of this mix of

Co-operation with rivals

WITH A broad smile, Mr Masaya Makiuchi, secretary of the Japan Socialist Party in Osaka, explains that when he national leader, have a few drinks together, she has a habit of criticising his branch for its collaboration with the ruling Liberal Democratic

She criticises us like a big sister scolding her brother. She thinks that we should be more aggressive in opposing the LDP, but she understands that in Osaka we are different and that we will support joint can-didates. We think this system is good for Osaka," Mr Makd-uchi says. Local politics is different in

Japan. In Osaka prefecture and city, the JSP and LDP, bitter rivals in the national parlia-ment, jointly support candi-dates, and are members of poli-cy-making committees with representatives from virtually all parties, the Communist Party excepted.

Ms Dol's political base is in the Kansai. In the neighbour-ing province of Hyogo. According to Mr Makiuchi, she owes the Osaka branch a few favours for support given more than 20 years ago when her smaller branch could offer only limited assistance in her first

election campaign.

Local politicians in Osaka are proud of their record of

Local politicians in Osaka are proud of their record of co-operation

co-operation, and are content to leave the fighting on philos-ophy to national politicians. They concentrate on more immediate local issues.

"Kansai people are not so interested in politics. They are more interested in economics and don't want to worry about politics. The LDP has been much weaker in Osaka than in other big cities, and there has been an even share of repre-sentatives," Mr Makiuchi says.

But the need to do business with Tokyo remains strong, particularly in the quest for central funding of ambitious local projects. Local politicians rely on the hometown pride of national figures representing

Mayasa Makluchi: secretary, Japan Socialist Party in Osaka

and while they can be con-

vinced to change policies, they can be difficult to persuade.

Co-operation among other-

wise antagonistic parties in

Osaka is closer than in most

areas. As members of a coali-

tion, they select and support the Osaka city mayor and the

Osaka prefectural governor,

and generally attempt to resolve differences in the back-

Kansai people are

economics and don't

worry about politics

Policies are decided by an

inter-party committee com-prised of about 10 per cent of

prefectural congress and city council members chosen from the coalition parties. Mr Maki-

uchi says that about 50 per

cent of policies are devised by government officials, while the rest originate from the party

In local elections, the LDP

secures about 30 per cent of the vote, the JSP slightly over 25

per cent, and Komeito (the

Clean Government Party) just

under 25 per cent. Komeito was founded in the Osaka area, and

has maintained a strong,

though now declining, follow

the region to push through legislation and money to lay the foundations for the Kansai International Airport and other

big-ticket items. Mr Shoni Nagamori, secretary-general of the LDP's Osaka branch, says that support is often sought from national politicians with a base in the region and, more specifically, those with senior positions in the LDP's factions. Ministerial titles provide an appearance of power, but factional heads carry more weight

in the party room.

The local branch also lobbies the various "tribes" of politiclans, the cross-factional groupings which focus on poli-cies in a particular sector. There is an "agriculture tribe," a "culture tribe." and a "trans-port tribe," all of which have influence in their chosen fields. "We try to influence the

transport tribe on the new airport. These people have a great impact in the party. In the parliament, a vote on an issue by LDP members will be unanimous, so it is important to influence decisions a long time before the vote," Mr Nagamori

Support from the majority of politicians in a "tribe" is not certain to lead to a policy decision in a prefecture's favour. Mr Nagamori says, "the influ-ence of the bureaucrats at the Transport Ministry is great,"

TSUBAKI Integrated Automation—

The 20th century has been an era of automation in which TSUBAKI has become a pioneer in developing systems for automating factories in Japan and around the world. That's because we are the world's largest

tions with a Buddhist group and has successfully drawn support from small business people and lower income earners, Mr Makiuchi says. It has maintained popularity by choosing its national leaders from among Kansai representa-

The LDP, JSP and Komeito assess the character of prospec-tive mayors and governors at a series of selection meetings, and the final choice must be

and the limit choice must be acceptable to all.

"We carry out this examination for many months. People from parties, local government officials and business people are nominated. It is a very Japanese style of making a decianese style of making a decision," Mr Makiuchi says.

At the national election in February, the LDP lost votes around the country, but in Osaka its number of seats increased from six to nine. Mr Nagamori says that the cam-paign strategy of suggesting that the election was a choice between "freedom and social-ism" was reinforced by the collapse of communist govern-ments in Eastern Europe.

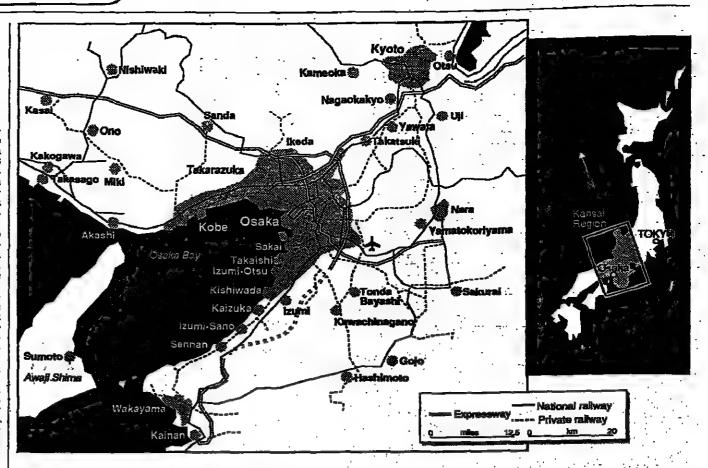

He also believes that Osaka people have become concerned about the increasing economic strength of Tokyo and "wanted to put more LDP representa-tives in parliament" to present Osaka's case more forcefully. At a national level, the LDP

has been under pressure on issues such as the introduction of a value-added tax, corruption, political reform and relaxation of controls on agricultural imports. In Osaka, all of the major parties agree on the big project policy as a means of stimulating development and want to increase Kensai's

autonomy.

Those matters aside, Mr Nagamori, at the LDP, says the most important local issue is the business climate. Interest rates are going up. There is a labour shortage. People are very worried about the Struc-tural Impediment Initiative

(SII) talks with the US."
And, at the JSP, Mr Makiuchi is most troubled by the
development of culture in Osaka. "About 80 per cent of newspapers and 70 per cent of the television programming are based in Tokyo. Osaka has a big population but it is not the centre of culture, and that is our biggest concern."

Local companies have a good record. Della Bradshaw reports

A tradition of innovation

THERE IS a Japanese proverb which says: "If you try and catch two rabbits at the same time you will not catch either.' However, Mr Taizo Katsura, senior executive vice president of the Sharp Corporation, says it is by chasing both rabbits that Kansai companies, such as Sharp, have been proven so

One eye, he continues, should be kept on the rabbit running just shead, and the other on the rabbit running

three years in the future.

That, he declares, is the long-term view which makes Japanese companies so different from Western ones, particularly those in the US. There, says Mr Katsura, shareholders are too busy watching their returns and profits.

Sharp is just one of a num-

ber of internationally famous manufacturers that claim the Kansai region as home. Sumitomo and rival consumer electronics manufacturers Mat-sushita and Sanyo also have

Indeed, it is very much amily affair; the founder

Shareholders in the West are too busy watching their returns and profits

Sanyo was the brother-in-law of the founder of Matsushita. Earlier this century Tokyo became the political capital of Japan, and many state-run companies and enterprises who counted government departments as their main customers power station manufacturers, for example - grew up

Kansai became the entrepreneurial centre of Japan as it was unfettered by governmen-tal edicts and demands. It was the home of Japan's first chain store, Takashimaya, for example, and developments as diverse as the first desktop electronic calculator and the first automatic railway ticket barrier were developed in KanIn spite of the downturn in the 1970s, that entrepreneurial spirit is a force which continues, says Mr Tadao Kagono, professor of business administration at Kobe University. Osaka entrepreneurs have time to think. In Tokyo you have to run because everybody alse is running."

He points to the US for a parallel. "You cannot find any innovation in New York, If you want innovation you go to Massachusetts or Silicon Valley."
This innovative tradition

applies to these companies' management techniques as well as it does to their technol-

They are famous for invent ing what is commonly referred to as the Japanese manage-ment style: life-time employment, the slow progress of new entrants up the company lad-der and a single union embracing every employee from the humblest manual worker to the most senior manager.

Whereas the Japanese management style is now finding back home in Kansai there are increasing pressures to adopt more Western techniques.

The pressure on the yen in the mid-1980s, combined with a growing shortage of qualified employees, has seen the Kan-sal companies reassess their

In particular, companies are finding it increasingly difficult to persuade talented graduates, particularly engineers, to start at the bottom of the employment and salary ladder when US or European companies will pay a premium for their tal-

As a result, poaching white-collar staff from rival companies is also growing. Companies are being forced to imitate their Western counterparts in other areas in order to retain staff. Sumitomo Electric, for example, has introduced an "elder staff" policy so that those who would normally have retired at 60 are encouraged to stay on until they are

the companies fall back on their traditional business styles, reports Mr Katsura In the 1980s, with companies under increasing pressure to cut the cost of their exports. Sharp introduced a policy called ELM, intended to cut energy, labour and material costs by 30 per cent, while maintaining quality.

A central feature of the policy was an invitation to all employees to contribute ideas

on how to cut energy and material costs. If that could be achieved, then staff lay-offs

could be avoided. The scheme proved successful, with over 30,000 suggestions coming from the workforce. In some areas materials and energy were cut by more than 30 per cent. The number

of screws used in Sharp television sets, for example, was reduced by half. In spite of the recent interest rate increases in Japan, and the consequent fall in the value of the yea. Mr Katsura predicts the Japanese currency

could become even stronger He says managers may need to introduce even tighter cost and quality controls. While the 1970s and 1980s

saw many of the organisations which grew up in the Kansai area — banks in particular move their main operations, if not their official headquarters, to the Tokyo area, consumer electronics companies such as Matsushita and Sharp contin-ued to support their home

However, many, such as Sumitomo Electric, acknowledge that their main sales and marketing offices were shifted to Tokyo so as to give the com-pany access to more up-to-date market information

Others - including Matsushita, which sells products under the National, Panasonic and Technics brand names - still maintain their roots in Kansai. Matsushita manufactures most of the 9.7m television sets it supplies to the Japanese manket in Osaka and Kyoto, and When the going gets tough, has its research and development laboratories there.

However, Mr Naomi Haga, a company spokesman, says now that Matsushita is manufactur-ing and trading on a global basis it is irrelevant where the company is sited - in Osaka

in Tokyo or on another planet. For that reason, many large companies – Sanyo, for exam-ple – that are keen to promote ple – that are keen to promote their international image, try to play down their Kansai

The concentration of such large manufacturing companies in the Osaka region has spawned a second engine for growth in the another type of company, that of the interna-tional parts supplier. On the back of their biggest customers, particularly the consumer electronics companies, several-smaller companies have grown

Small companies in the area are also very innovative. They start as suppliers to Matsushits, for example, and acquire skills that enable them to become global parts suppliers," says Prof Kaguno.

PROFILE: Kyoto

Timing it carefully at Japan's leading tourist destination

AS THE rain poured down outside, the lady at the Kyoto tourist centre said: "You've come at the right time." She meant it. February 3, it turned out, was the right day of spring in the Japanese religious calendar, and an occasion for demon-chasing ceremonles at various of Kyoto's many temples.

The other advantage of coming to

Japan's number one tourist spot in early spring was that it was possible to take photos without getting at least 94 people in the frame.

Kyoto's physically most glorious season is October-November when the leaves turn brilliant reds and yellows, an aesthetic fact of which all too many Japanese are aware. This is peak visiting time — 38.7m Japanese travelled to their old imperial capital in 1988, slightly more than 100 times the number of foreign

Luckily, the city can take it, with some 400 Shinto shrines and more than 1,000 Buddhist temples.

Using the crude yardstick of popularity as my guide, I went first (early in the morning) to the most visited, the Kiyomizu temple, with a wonderful view and adjacent Shinto shrines coping with special requests - success at school exams, health, safety in traffic, and of course the ideal spouse.

Number two in the Kyoto popularity league is the Kinkajuji or Golden Temple. And understandably so. Three-quarters surrounded by a little lake, it is largely covered in gold leaf, which looks quite new. It is. The original building was, after 550 years, burnt to the ground by a young man in 1950 who gave as his excuse that the temple was too beautiful to exist, and who was later the subject of a book by Yukic Mishima, the Japanese nationalist-romantic. In fact, a little research into pre-1950 photos at the Kyoto city museum made me think that the replica was even better than the original.
Turning from the religious to the

The original Golden Temple was razed by a young man who gave as his excuse that it was too beautiful to exist

menacingly secular, the Nijo Castle is worth a visit to get an idea of how feudal Japan was really ruled by military dictaors under the fig-leaf of imperial rule. Part of the reason why the Tokugawa Shoguns who seized power in 1000 hours is restill the mid-10th agardian 1600 kept it until the mid-19th century was clearly their paranoia. They built Nijo as their Kyoto base.

Cross the drawbridged most, and you would have been frished and disarmed at the gatehouse. Trespass along the corridors inside the main building and the floors, ingenuously designed to squeak away. Make a false move as you bow and

scrape to the Shogun, and watching bodyguards would have burst out of surrounding closets. All in all, paying a call on Stalin must have been less hard on

the nerves.

These days visiting the Kyoto Imperial Palace and the Katsura and Shugakuin Imperial Villas is much more of a problem. To visit the villas everyone has problem. To visit the villas everyone has to book three months in advance— the Imperial Household wants to check you out and avoid any repeat of the Golden Temple arson. The same delay faces any Japanese wanting to visit the Imperial Palace, but here foreigners are in luck. They need only bring their passports 20 minutes before opening time.

minutes before opening time.

To the uninitiated like myself, some Japanese performing arts can be long and incomprehensible, like for instance 45 minutes spent outside in a February evening watching a medieval pantomime that vaguely resembled Red Riding Hood.

But for the lary visitor who wants a catch-all taste of Japanese culture, I can highly recommend an evening visit to the Gion Corner theatre hall. In an heur you can see tea being ceremonionaly poured, Koto music played, flowers arranged, and watch a Gaguku court dance, a Kyogen comic play, a Kyomai dance and a Bunruku puppet play, All this, and you can get your photo taken during the sion with two grishs girls, for Yen 2,100.

David Buchan

In spite of claims that the region's economy is being revitalised, there are problems, reports Robert Thomson

The heads that turn constantly towards Tokyo

Osaka Securities Exchange like to point to the skylight-style ceiling above them as a symbol of the almost infinite potential for stock prices to rise - the sky is the meant to be the

A less lofty reality of market instability tied to the Tokyo slump has lowered ambitions on the OSE floor, and begun to stir doubts in otherwise optimistic Osakan minds about the longer-term health of the economy, which had also been pre-sumed to be immune from

downturn. Kansai has done better than most areas in retail sales, up 9.9 per cent in the last half of 1989 compared to Tokyo's 6.5 per cent increase, and projected capital spending this year, which is expected to rise per cent, while the national average is 2.7 per cent.

The upturn has been partly

prompted by the region's land price leap in the past two years - residential prices in Osaka rose 56.1 per cent last year, and commercial land prices were up 46.3 per cent. The surge has bridged some of the gap between local and Tokyo prices and lifted companies' asset values, but presented problems for companies with limited and holdings and ambitions to buy property for production facilities or new retail outlets.

Despite the favourable figures, heads in Kansai are constantly turned east towards Tokyo, and local governments have become concerned at the drift of large companies to the capital and the region's continuing image as an aged industrial centre. A perceived need to develop quickly has inspired the rush of "big projects," which are intended

the Asia and Pacific Trade. Centre, Osaka

to strengthen the entire region, but do not directly address the small companies at the centre of the Kansai economy.

Small and medium enter-prises are responsible for about 58.3 per cent of production in Kansai, compared with 52 per cent nationally, while 73.9 per cent of employees work in those enterprises, compared with 72.2 per cent nationally. Many of the smaller companies. are family-run, and more conservative in borrowing habits than Tokyo firms, which are considered profligate by their Kansal cousins.

Only 3.7 per cent of Kansal employees work in primary industry — the national average is 9.3 per cent — while 36 per cent are employed in secondary industry and 60.3 per cent in the service sector. As a whole, gross regional product comprises about 20 per cent of gross national product; while exports make up 21.7 per cent of the total and imports Kankeiren, the regional economic federation.

Kankeiren is betting on the big projects as a means of stimulating the economy, and Mr Kazuaki Harada, managing director of the Sanwa Bank and head of the bank's research institute, appears to be convinced: "I think that the Kansai economy is being revi-

He contends that a popular saying, "higher in the east, lower in the west," has been turned around since 1988, and "the economic indicators show that Kansai has strong demand." However, he admits that apart from the big projects, land prices have been stimulant, and that the impact on the economic base of higher interest rates and currency instability remains to

The natural advantages of Kansai, Mr Harada says, are its proximity to the newly-industrialised countries of Asia, and the strong economic base. Problems include the absence of "information momentum" comparable with that of Tokyo, and a resulting inability to generate information."

He is also concerned that the

labour shortage afflicting the country will be particularly detrimental in Kansai: "The

statistics don't tell you that it is too bad, but the facts tell you that the situation could get worse."

Those concerns are not getting in the way of the spate of projects that are not officially "big" but are nevertheless significant. Matsushita, the electronics group and a Kansai company, has developed a commercial area away from the city centre of Osaka, including two office towers and an imports emporium.

A public and private consortium is building the Asia and Pacific Trade Centre in the port district of Osaka, and intends it to be the largest "showcase of foreign products" in the world. The creators compare its role to that of the traditional Japanese arranged magniage: "In Japanese culture, the arranged marriage has served an important role in

has served an important role in society, allowing potential partners, who would otherwise never know of each other's existence, the chance to meet."

Traded products will be of the daily life variety, including clothing, furniture, food, and jewellery. Mr Kunio lautsu, the centre's president, and the centre's president, and the former senior managing director of Osaka Gas, expects that the centre will also take advantage of expected economic development in

The centre's more prosaic

problem at the moment is finding tenants, foreign and domestic. for the buildings, which will have a total area of 350,000 sq metres, including 180,000 sq metres of trading space, when completed in 1993. Mr Izutsu says that government organisations have about a 40 per cent share in the Y180bn project, but that private companies hold the majority stake.

Osaka Securities Exchange, once suffering from a "second market syndrome" in the shadow of the Tokyo exchange, develop an identity of its own. It has introduced index options and index futures trading, plans to launch convertible bond futures, and has a new second section to attract smaller, local companies.

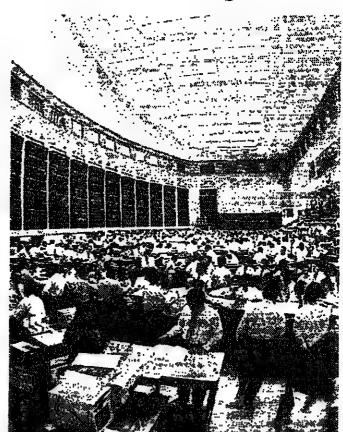

The new section now has 26 issues, while other previously listed issues have graduated to the standard second section. which has tougher auditing standards and requires a longer period of incorporation. Aspiring companies must be based in the Kansai area.

Mr Minoru Nakamura, director of the exchange's research department, says that the numof applications for listing on the new section has grown with the strength of the Kansai many companies are preparing documents for listing. These companies are often smaller firms which have a unique product line and are expanding

Osaka dominates the Kansai economy, accounting for about 51 per cent of gross regional product, 45 per cent of manufactured goods, 47 per cent of gross annual retail sales, 71.5 per cent of outstanding bank loans and 69 per cent of compa-nies listed on the stock

But the Osakan economy has been hampered by a clogged road network likely to be further congested by the grand projects. The city's mayor, in an attempt to convince residents to leave cars at home, has said that he will take a train to work on April 20.

City officials are also encouraging managers of small businesses to end a tradition of physically collecting debts two or three times a month, and to use more modern financial devices to settle accounts. There is resistance to the demand, as business people have used the personal contact to swap information informally and cultivate clients, and they

Doubts over spending spree

"big projects". Many people hope that these big projects will prove the moving force behind the ecoarea. helping to reposition Osaka and its hinterland as the commercial heartland of

Big the projects certainly are, both in size and in volume. Almost 400 of the 623 main projects planned have already been budgeted for and will cost Y25,000bn (£104bn). That figure could almost double once all the projects are completed in the early 21st century.

Funds for the projects, covering road and rail infrastruc-ture, housing, a teleport, the Kansal international airport and a new science city, to name but a few, come from a mixture of local and national government coffers, as well as

Proponents of the massive infrastructure scheme, such as Mr Hirovuki Gohda, general manager in the planning department of Sangyo Kaseika the Centre for Industrial Renovation of Kansall, argue that the spending spree has a knock-on effect in bringing money into the area.

Others are more sceptical. Mr Takayuki Sasaki, director of the management administration department at JR West. the railway company, believes throwing money at the problem is not necessarily the

He argues that the big prob-lem is to co-ordinate the pro-jects, rather than just allowing individual schemes to develop

unguided.
Opinion is divided as to whether the projects have already stemmed the rot of the 1970s and 1980s, when Kansai companies moved their operations on masse to Tokyo. Mr Sasaki is dubious. But Mr Tadao Kagono, Kobe Univer-sity's professor of business administration, is confident

the master plan is working. He cites the growing number of international companies, as well as native Kansai ones, that have set up offices in the Osaka region - Ciba-Gelgy.

THERE ARE two expressions on the lips of Kansai's business community these days - pudding. And Mr Gohda points out that the region is enjoying real growth of about 5.5 per

cent a year.

The most critical of the projects in attracting overseas investment will be the airport, investment will be the airport, built on reclaimed land in Osaka bay, and Japan's first airport to be open 24 hours a day. Combined with that is Rinku Town, a new business and leisure complex to be built onshore, opposite the airport.

But the most expensive plan

But the most expensive plan is not for the airport but for Science City, an ambitious project to enable the Japanese to catch up with what it sees as its lagging position in basic

science research.

The plan is to build a city in the hills above Osaka, span-ning three of Kansai's prefec-- Osaka, Kyoto and

Nara.
The civil engineering work alone – the roads and railway infrastructure and buildings – will cost Y4,000bn, and there will be additional expense to equip the scientific research

When complete, Science City will be based around university and commercial research centres, but will also have all the other attributes of a city housing and cultural facilities. The plan is to have 380,000 people living permanently in the city by 2010. me research institutes are

an advanced institute of science and technology. The organisers hope many Japa-nese and international companies will also set up their research institutions in the area, and are already in talks with several, including a West German pharmaceuticals manufacturer.

But perhaps the scheme which is arousing most inter-est in Kansai these days is not the permanent monoliths to science or transportation but Expo '90, the six-month long International Garden and Greenery Exhibition, which runs from this month.

The long-term aim of the project is to ensure that Osaka often called the Manchester of Japan because of its indus-trial heritage and even by Jap-anese standards particularly lacking in parks and greenery would have some permanent park or leisure space.
Organisers of the Y400bn

event are expecting 20m visi-tors to the international gar-den exposition, the first to be held since Liverpool in 1984. Ten thousand workmen have been beavering away to ensure the site is ready for the open-ing, building pavilions, laying tarmac on roads, and planting

the trees and shrubs necessary to make it a green event.

To the European eye green-ery is not the image that springs to mind. Standing 64 metres up in the Statue of Life Tower in the centre of the park, the scene is one of motor-ways ringing the Expo site and surburbia stretching away as far as the eye can see.

The 32 pavilions built there include Mitsubishi's huge metal tulip and another built by Osaka Gas which is a styled version of a green moun-Only inside the massive con-

servatory, which has rooms heated to different temperatures to promote the growth of varied plant types, is there a real sense of greenery.
Locals, too, are divided between the enthusiastic and the sceptical. Some believe the

park, built on a landfill site, could be subject to methane gas seepage. Others are resigned to the present lack of eenery. "You should come back after the rainy season in June," jokes one local resident. "After that there'll be a lot more

greenery around.

Della Bradahaw

Robert Thomson strolls round an international marketplace. planned as an import showcase, near Osaka

From golf tees to popcorn

ON OPENING day, the British-made beechwood golf tees, their tin decorated with St Andrews insignia, sold out quickly, and the queue for popcorn popped the genuine American way was four deep at the Popcorn Palace.

The christening of the Inter-

month on the outskirts of Osaka was one of the more glittering by-products of trade fric-tion. Built and backed by the Matsushita group, the elec-tronic products company, the Imp, as it is known, is intended to be an import showcase, and to be evidence that Matsushita is doing its bit to open Japan's

An import theme runs deep. Public toilets in the 60-store complex have been based on famous lavatories in Sweden, Spain, the US and West Ger-Spain, the US and West Germany, and come complete with imported porcelain. A floor of stores with mostly European goods is called the Euromarket, and the American Market has the popcorn and Western gear, and an art jewellery store going by the name of Neo Philia.

Matsushita had the idea just over three years ago, when trade friction was warming up, and the company had few prob-lems in overcoming Japan's Large-Scale Retail Store Law, condemned by Washington as a "structural impediment" to

Washington's complaint is that the law can restrict the opening of large complexes for 10 years or more, but the Matsushita project eased by with the backing of the Ministry of International Trade and Industry (Miti), Labour Ministry and the Osaka Government.

The investment was made by Matsushita Investment and Development (MID), which commissioned and paid for the design work for foreign-owned

Large Japanese export-oriented companies are under pressure from the US

stores, and hoped that most would have real foreigners on staff to give the complex the desired cosmopolitan feel. MID demands no fees for advertising for the complex, and rent-in-advance, which can be a debilitating 10 months or much more in Japan, has been

wares stores in the complex . must pay the usual fees, and while MID boasts of the "60 stores from 13 countries," the company was disappointed that some foreign companies approached did not take up the offer.

fier. store, Life Savers, is run by a Matsushita uses its import couple who manage a Queen-

network to get around the problems posed by Japan's lab-yrinthine distribution system, which US trade negotiators have also cited as a "structural impediment."

The Japanese company buys the stock from foreign suppliers before it leaves the country of origin, and then resells the stock to them in Japan.

Apart from making use of the Matsushita network, the system ensures that the imports show up on the company accounts as Matsushita imports, even though the goods may be Australian wet-suits or hand-made Italian wallets that the company itself has no intention of using. Large Japanese export-ori-

ented companies are under great pressure from the US to prove that they are increasing their use of foreign products, so Matsushita will be able to show that its purchases of for-eign goods rose sharply in 1990. The company has plans for at least five more similar complexes, ensuring that the import flow will continue to rise even after the IMP stock flow stabilises.

Foreign owners were chosen Matsushita through a combination of research and chance Engel-Hof, a branch of a Hamburg-based kitchen and tableware store is run by Mrs that about 95 per cent of Japanese who come to Hamburg visit her shop, where it is called Hiroko - the name in Osaka has more of the desired German feel.

Osaka's mushrooming skyline

tinct difference between the real scene and the photo-graphic display designed to inform visitors about the local

The colour photograph shows only Matsushita's twin skyscrapers in the new business park. But next to them in the real scene two further sky-scrapers, occupied by NEC and Fujitsu, have sprung up. Looming behind them another mon-ster construction is begining to

take shape.

The rapid growth in the number of office buildings springing up in Osaka is just one reason behind the exorbitant prices now being asked for commercial buildings and housing in the region. The rocketing sums are taking their toll on almost every busi-ness and household in Kansai. If you buy prime commercial office space in Osaka these days — in, say, Osaka's Mido Suji Boulevard — it could cost up to Y30m (£125,000) per square metre. A quick calcula-tion shows it would cost about

waste-paper bin. And although commercial property prices are still only 62 per cent of the cost for similar accommodation in Tokyo's infamously expensive business areas, Osaka and Kyoto are rapidly closing the price gap.

£13,900 to house the proverbial

The only good news for those trying to get into the market — if it can be called good news is the consensus that the price of accommodation in Kansai, both commercial and residential, will not hit the dizzy heights for which the Tokyo area is renowned. According to local myth the cash needed to buy Tokyo's central Chiyoda ward - the equivalent of, say, buying the Westminster dis-trict of London - could also fund the purchase of the whole

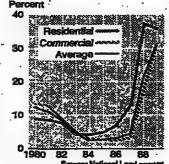

Land speculation is largely blamed for the land price increases in Kansai, says Mr

LOOKING NORTH from the observation points at the top of manager of Mitsubishi Estate in Osaka, and in particular the ripple effect caused now that speculators are moving away from Tokyo where prices have peaked and it is difficult to earn a fast buck.

Such speculation began in Tokyo in 1986, when the city became a focus for financial trading. That, combined with low interest rates, led to rocketing prices there.

there are the companies which are eager to find cheaper office space than that in the capital, and many - such as NEC and

Land price rises

Fuitsu - are looking to Osaka with its heavily publicised new image as the solution. In par-ticular, land in the city centre and around the new international airport being built south of the city is much in demand, reports Mr Yamashita.

The situation in the Kansai capital is different from that in Tokyo because the provincial city grew up as the centre for a clutch of small merchants, each owning their own piece of land. In Tokyo, by comparison, one company can own vast tracts of land in the city -Mitsubishi, for example, owns large chunks of Maranouchi. the city's main commercial centre.

As a result, it is not just the traditional property compa-nies, such as Mitsui or Mitsubishi, that are reaping the bene-

fits of building in Kansai. Everyone - from insurance companies to the railways - is getting into property develop-ment. Recently for example, the Nankai Electric Railway Company hit the headlines by selling its baseball team, the Nankai Hawks, in order to free the stadium area for redevelop-ment. (The team will will be relocated to Fukuoka in Kyu-

shu, where land prices have not reached the same giddy beights.) The statistics on property prices tell the tale. Between April 1988 and March 1989

April 1988 and March 1989 prices of commercial property increased in Osaka by 35.6 per cent. In Japan as a whole the increase was just 10.3 per cent and in Tokyo 3 per cent. The figures for the year ending last July emphasise the point even more, with Osaka commercial property prices leaving 56.4 per property prices leaping 56.4 per cent, compared to 1.9 per cent in Tokyo and a national average of 7.5 per cent.

Mr Yamashita believes the

recent interest rate hikes in Japan will curb land speculation, and he hopes 1990 will be the year when the rapid price rises slow down. "I feel 1990 might prove the turning point, but I'm not really confident,"

But while many companies are smugly rejoicing in the fact that their investment or specu-lation has paid off, the fall-out is rippling through into the domestic housing market.

First-time home-buyers are learning the hard lesson already familiar to their Tokyo peers: to be able to buy a home they will have to move out of the urban areas and into the wilds of the countryside. In the year ending July 1989 house prices rose 37.3 per cent in Osaka, making the cost of buying a house there 73 per cent of the cost of buying one in Tokyo.

More worrying for the region is that from November 1989, for the first time since 1945, the number of people living in Osaka prefecture has dropped, more quickly.

by the Osaka prefecture gov-ernment. The drop is increasing month by month as people move into neighbouring prefec-tures, such as Kyoto or Nara, in order to find affordable

accommodation.
In spite of the difficulties, Mr Yamashita believes the two generation mortgages often talked about when Japan's legendary house prices are dis-cussed are extremely rare. But he acknowledges that there are cases where families commit the parents and then their chil-dren after them to pay the

mortgage.

More common, he believes, is the standard 25-year mortgage. And he argues that it is still feasible for families where the head is 35-36 years old, with an annual income of Y5-6m (£20-24,500), to afford a condo-minium within an hour's travelling time of Osaka. Ten years later, when his salary has increased to Y7-8m, he can afford to move upmarket and buy a house, Mr Yamashita

says. However, in February for the first the average price of a new condominium in the Kansai area topped Y50m.

The burghers of Kansai are now preoccupied about how to deal with the situation. Mr Hiroyuki Gohda, general manager of the planning department at the Centre for Industrial Renovation of Kansai, believes that legislation to free up unused land and to increase the height of buildings could be the answer. However, blocks of condominiums up to 36 storeys high are already under construction in the Osaka area, and short of reclaiming yet more land in the Osaka bay area, it is diffi-cult to see where more housing

can be built. The other solution, suggests Mr Gohda, is to admit defeat and to improve transport links so as to ensure that commuters . living a long way from the cen-

Con

An Acorn.

In 1918, a young man in Osaka had a vision. He saw how he could make a better socket for a lightbulb.

He had little money, and his health was sicycl uncertain. But, as he was to say himself G. Wlater in his life, "when you have a dream, g nothing is impossible in this world."

His wife pawned her silk 🔊 kimonos to help him. He raised some money, s and with the help of his brother-in-law, he sicve went into production.

His name was sot Konosuke Matsushita and the company he was founded as a twenty two year old was to become Matsushita Electric, now the fifteenth s largest industrial company in the world. That sommakes it quite an oak.

The vision that fired Konosuke Matsushita wasn't so much of a better socket but of a better No world. A world in which electronics could A * make life easier and more comfortable for the A fordinary man. So, his second product, for Sinstance was an adaptor Before K. Matsushita's & design, people could only use one appliance Nat a time. Fire or lamp. Now they could have warmth and light at the same time.

This was the first of manifestation of his philosophy of Human con Electronics, which he was to define for all, 500 his employees as early as 1932.

"The sperimission of a manufacturer is to overcome + poverty, to relieve society as a whole from the so misery of poverty and bring it wealth.

Business and production are not meant simply to enrich the shops or the factories of the enterprise concerned, but of all society. And society needs the dynamism and vitality of business and industry to generate its wealth.

Only under such conditions will businesses truly prosper. The real mission of Matsushita Electric is to produce an inexhaustible supply of goods, thus creating peace and prosperity throughout the land."

As an entrepreneur and as a businessman he realised that he had an awesome responsibility of the state of the He was able to change people's lives.

He determined that it should always be for the better. And that went for every one of his staff too. So, when the Depression was forcing a many businesses to retrench and lay off workers, Mr. Matsushita decided to build a new factory.

It was a huge demonstration of ve faith and confidence in his people as well as whis products. They rewarded him by spending their evenings selling the goods they made carlier in the day to

their MOVE. 🕏 neighbours. prospered. As well as in his business methods, he was also a pioneer in Jon MUS marketing. When he odesigned and patented a bicycle slamp that slasted five times longer than any Nother lamp, Sfor instance, he gave it a National.

He was ahead sof the times. Most other Slarge companies simply relied on their own 🕏 names when selling their wares. Today, of course, Matsushita Electric Sowns and markets such internationally famous brand names as National, Panasonic, Technics Nand Quasar.

Together these Brands provide the world with a wider spectrum of goods than that of probably any 2 other manufacturing company. From hi-fi systems & to vacuum cleaners, video cameras to computers, from Lax machines to industrial robots, from the tiniest of 2 electrical components all the way up to production line equipment, Matsushita Electric both makes it all.

When he was still young, & K. Matsushita once watched a man drinking water ofrom a tap. "Wouldn't it be wonderful," he wrote, guif household products could be as abundant and S as cheap as water."

The company that Sbears his name is getting ever closer to that goal. & Enriching peoples lives with a constant stream of new products.

If research and A development was crucial in the early years of Z Matsushita Electric, it is no less vital today. The 🔊 😓 company's future depends on the creation, of let alone the refinement, of new technolo- of gies. The work being done today in semi & conductors and superconductivity may screate a wealth of new possibilities. A today might easily lead to radically better and & cheaper medical instruments, for instance. Or to better data processing systems. Speedier office automation $\frac{\pi}{2}$ processes.

What was one man's dream has now become a vision for thousands. Designers *, and engineers who all want to push the frontiers of knowledge further forward. And the company 🥞 encourages each and every one of them to think ? of themselves in this way; as explorers, searching § for a better world.

K. Matsushita himself always took the global view. He believed that technology provided the means by which peoples could be united. His 201. company has now expanded beyond the confines

business 38 different countries. In the UK alone was over Electric has seven factories and employs over things) c, TV sets, microwave ovens, cellular phones, fax machines, ces, typewriters and printers.

One of these * factories, in Cardiff, has recently won a Queen's Award & for Export Achievement.

In Europe the & company has established its presence with no less 2 than 15 different factories making an equally diverse $\frac{\pi}{2}$ range of products.

the company recognises that it has an important of rôle to play in the local 🐾 community. Here in the 🖫 U.K., for example, the 🐛 £500,000 to assist 2 with the further training of professional engineers. 👱 Such activities are all part and parcel of an inter- 👱 national as well as a national policy of encouraging 🐾 young talent. Wherever the company hoists its flag, 🛫 the same mission statement holds good. To develop and to sell products that meet real consumer needs. 🕏 And, in that way, to achieve 'peace and happiness 🗞 through prosperity.' Right from the start, producing adaptors and bicycle lamps from a backstreet factory in Osaka, Konosuke Matsushita had a philosophy. Matsushita had a philosophy.

"We do not work for bread alone," he told his employees, outlining his concept of the company as the servant of the people. And because he had a philosophy, he also had a plan. But where most businessmen draw up a 10-year plan, or perhaps even a 20-year plan, he drew up a 250-year plan. He explained his long-term vision thus: the 250 year period would be divided into ten 25 year spans. In each 25 year span there would be 10 years of construction, followed by 10 years of application and then five years of 'fulfillment'.

The company is now in the third of those 25 year phases, and is as vigorous today as it was over 50 years ago. Though it continues to branch out, the roots are as strong as ever.

On April 27th 1989, at the age of 94, Konosuke Matsushita passed away. From a couple of silk kimonos and some bakelite he had fashioned a company which is set fair to flourish far into the 21st century.

And all in less time than it takes an acorn in a forest to grow into a fully mature tree.

It's still quicker by train

IN OSAKA if you have plenty of time, and yen, you take a where quickly you go by train. The trains and subway systems serving the city are characterised by their frequency and low fares. That, say the local railway companies, is due to the early domi-

But since the privatisation of Japan Railways (JR) in 1987, the private companies have become increasingly worried that their core businesses their railway services - are being eroded by the local JR company, JR West

nance of private railways in

Commuters, too, have noted the difference, with aggressive marketing and cheery faces from eager JR employees now the order of the day. JR West has even introduced a complaints and information office in many of its major stations, symbolised by a large pink elephant. The big ears of the elephant, says JR West, represent the company's eagercustomers who use its network every year.

It has also kept its new shareholders happy with impressive profit returns. In its second year as a private company, ending March 31 1989, JR West more than doubled its net profit from the previous year, to Y4.7bn (£19.6m). This year the company will also turn in respectable profits, says Mr Takayuki Sasaki, director of management in the administration department of JR West, although he ruefully points out that profits are unlikely to

double again.

Although almost half of JR West's income comes from running shinkansen, or bullet train, services between Kansai and points further west on services that the company is focusing its efforts, says Mr

The use of the shinkansen. he says, rises and falls depending on the economic situation employees stop using the fast train services for business, there will always be commut-Osaka, Kobe and Kyoto.

One factor contributing to JR West's profit increase this year will be the rocketing land prices in the Kansai area. Because the tentacles of the JR West network reach further afield than those of its competitors, commuters moving away from the urban centres to find cheaper housing are using JR West services. Faced with this increased

local competition. Kansai's five private railway companies -Hankyu. Hanshin, Keihan, Kintetsu (Kinki Nippon Railway) and Nankai - are screaming unfair tactics. They point to discrepancies in tariff setting, left over from JR's days as a publicly-owned company, which gives the privatised company flexibility in offering bargain tickets. Although JR is more expensive on basic fares, it is allowed to cut its prices on

tickets for off-peak travel. As all new fare structures or price rises have to be approved by the Transport Ministry, the five private companies have to wait before they can change

Some deals have already been struck, though. Kintetsu, for example, has introduced a discount system for regular passengers who buy tickets in

has also introduced a ticket which allows passengers to travel on as many trains as they like for a three-day

And, points out JR West, any unfair advantage it may have had in the past is now over. In the future it will have to apply for price changes in exactly the same way as its private rail-

way counterparts.
Mr Masanori Matsuoka, manager of the planning and project co-ordination depart-ment at the Kintetsu Corporation, believes that the private companies have to compete with JR on price and service because they cannot compete

JR West has faster trains and straighter track, a legacy of the days of huge public investment and the company's secondary role as a military transport system. So a journey from Osaka to Kobe, for example, a distance of 33 kilometres, takes 20 minutes by JR, but 27 or 23 minutes using the private companies.

Nor can the private companies compete on technology. The seven privatised JR companies share a research and development laboratory which is working on the latest shinkansen models as well as linear motor devices, which use super-conducting magnets to propel the trains. The increased competition is

likely to force the private railway companies to diversify even more widely than they do already. Department stores, housing and commercial property are the main interests of the five companies, although between them they also own long-distance and local bus service, cargo services, travel agencies, supermarkets and car sales outlets.

Kintetsu, for example, which is the oldest private railway is the oldest private tallway company in Japan, even has two hotels in San Francisco. Less than 10 per cent of Kintetsu's Y2,463bn (about

Kintetsu's Y2,463bn (about £10bn) turnover came from its railway business last year.

In particular, the five private companies are looking to the huge catalogue of building projects — the "big projects" as the Japanese call them — that are now taking place in the Osaka region as a spur to further growth, both in the railway business and other activiway business and other activi-

tles, such as housing.
The Nankai Electric Railway Company, for example, is looking to the new international airport to provide more passengers on its two lines, which run to the south of Osaka city along the bay. Together, the two lines carry 800,000 passengers a day to and from the city. When the airport opens, the company is predicting that an extra 55,000 passengers will use the lines.

Hanshin Blectric Railway, which runs services between Osaka and Kobe, to the west, is hoping its passenger figures will be boosted by a different kind of event. Employees there are keeping their fingers crossed that the promising start made this season by the company's baseball team, the Hanshin Tigers, will bear fruit later in the year.

When the team last won the Japan League in 1985, the Hanshin line carried 2m fans to the baseball ground during the season. Since then, the team has turned in less spectacular performances and traffic has dropped to only 1.2m

THE TRAFFIC in airports in the Kansai region has become congested. There is the Kansai International Airport, under construction on a speciallybuilt island, the existing Osaka airport, once due to be closed but now likely to remain open, and a Kobe offshore airport, plus a collection of smaller facilities in more rural areas.

Each prefecture's grand plans are a symbol of parochial pride and of the difficulty of achieving complete co-opera-tion for the sake of the "Kan-sai." Each likes the idea of sharing airport facilities, but fears that the more distant the international airport, the more their areas will lag behind in

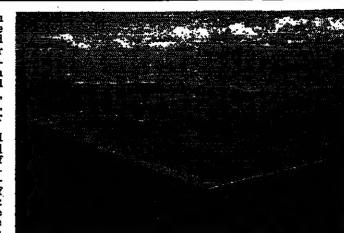

development.
In principle, all of Kansai is united behind the Y1,000bn Kansai airport, which has received central approval for one runway on a man-made island 5km into Osaka Bay, but is still to get Tokyo's approval and money for a grander, sec-ond stage with three runways. Tokyo has generally argued that the first stage should be completed before further money is granted, while Kansai companies and govern-ments have formed the Association for the Realisation of the Early Completion of the Kansai International Airport Overall Plan to argue that the second stage should be approved and

funded immediately. Mr Shoni Nagamori, head of the Osaka branch of the Liberal Democratic Party office, said that the complete project must be approved in the inter-ests of stimulating the "whole economy." Local party officials are lobbying LDP leaders in Tokyo in the hope of winning approval by the end of sum-

While Kobe City and its prefecture, Hyogo, support the Early Completion committee, they also realise that if Kansai airport gets its money, then the dreamed-of Kobe airport, also to be built in Osaka Bay. is unlikely to proceed during this decade.

Kobe was offered an airport in the early 1970s, when the Transport Ministry was mapping out a strategy for long-term development, but the city's then mayor was opposed to the plan, which was announced at a time of rising environmental concern amons residents in the region. The mayor based a campaign on his opposition to the airport, and won his election, though he alienated the Transport Ministry.

A few years later, the same mayor decided that an airport was necessary for Kobe to

maintain its "port city" image, and the environmental crisis, marked by appalling air pollu-tion, had eased. He began pressing the Transport Minis-try, which initially ignored him, and, according to local officials, still bears a grudge against Kobe for the earlier

Mr Kiyoyuki Kanemitsu, chief of Kobe's international department, says that the city supports the Kansai project because the airport will be only 90km across the bay and will be closer to Kobe than to central Osaka. He hopes that Kobe's reputation as a cosmopolitan city will encourage international visitors to the region to stay in its hotels.

maintain its international sta-tus. Mr Kanemitsu says, though he insists that the two airports "are not in competition," and that the Kansai backers in Osaka also support

the Kobe plan.
"If you look at this region of 20m people and compare it to places like New York and London, where there are more than one airport, we don't think it is excessive to have a Kobe airport," he says.

Privately, Osaka officials cannot understand why Kobe is pushing for its own airport when negotiations for the Kansai plan are at such a delicate stage. And some Kobe officials do not understand why Osaka is not content with one run-

the mainland area adjacent to the airport. Of the initial Y1,000bn cost of the airport itself. Y560bn is for the reclamation of the island and for a bridge linking it to the main-Mr Nobuyuki Higuchi, manager of the international affairs

The word alesco means "to grow" in Latin, and the ALESCO trademark is designed to reflect our strong drive and determination to achieve growth. As one of the Kansai region's premier companies and the largest paint maker in Japan, we are applying advanced painting and coating technologies to make the world a more colourful place. But our expertise - extending to biotechnology, electronics, new materials, and aerospace - doesn't end there.

At Kansai Paint, we approach growth with the indomitable spirit of ancient Rome. Building a firm foundation upon which society may prosper is an important role for us.

No FT? No problem in Japan

Keeping up with the news when you travel to the Far East used to be something of a challenge. The world seldom stands still. These days, in fact, just a few hours can be enough to change history for ever.

Happily for FT readers, staying in touch will soon cease to be a problem in Japan.

Because from mid-year, when you travel in Japan the FT goes with you - faxed overnight by satellite direct from London, and printed locally for the start of the working day. Ask for your copy at the hotel or on the news stands, in Tokyo or in other major Japanese cities.

If you're a resident, we'll hand-deliver the FT to your office in central Tokyo, first thing every day.

call Tokyo (03) 295 1234 now

FINANCIAL TIMES

WHEN HEAVY industry in the Kobe district was showing signs of advanced age, the local government leaders began planning to develop a new industry that: would enhance the area's image. They chose fashion.

Ten years ago, the city held a suc-cessful fashion exposition, Portopia. (Port from the area's traditional fame as a port and the "opia" from Utopia) which has spawned many Expo imitators in Japan. The fair also inaugurated a designer-made island intended to be a fashion centre and a model of 21st cen-

tury living.

Fashion Town, as the heart of Port Island is called, is surrounded by a framework of cranes that support the Aman contemplates the waters off a pier at the port of Kobe country's largest container port, and is a link to Kobe's past as a cosmopolitan port city and foreign enclave in 19th century Japan.

Mr Kiyoyuki Kanemitsu, Kobe's Mr Kiyoyuki Kanemitsu, kobe's director of international affairs, says that the area had the country's first jazz band and, significantly, the first golf course, and was a meeting place for eastern and western culture." Kobe's cosmopolitan image is maintained by a cosmopolitan image is maintained by a cosmopolitan image is maintained by a cosmopolitan image is maintained. national bakery chain called Kobe Belle and a collection of restaurants claiming Kobe connections.

"It has always been a city willing to: accept new ideas. With the changes in the economy, we decided to place an emphasis on fashion because we wanted to produce more value-added products. We thought fashion was one of our strengths." Mr Kanemitsu says.

The city proclaimed itself to be a centre of fashion in 1973, and then set

City officials explain that the industry on the island is defined as lifestylerelated companies:

about building a reputation, as well as Port Island. After the war, dozens of small trading houses dealt illegally in scarce materials, setting up temporary shop to meet local demand, and taking advantage of the flow of textiles through the port.

Thirty-eight companies have settled in fashion town; although some fall very loosely into the category - the list includes 18 apparel-makers' offices, and the remainder ranges from confection ery manufacturers to dealers in pearls. City officials explain that the fashion industry is defined as lifestyle-related

Kobe has fulfilled the proclamation made 17 years ago, but Port Island, while embodying some "21st century city" architecture, remains a worry for city officials and for the companies based on the island. The fashion companies have tailor-made buildings to suit their image, and have created a sense of space lacking in Osaka and Tokyo, but company executives admit that the island lacks atmosphere.

The still unreached ideal is articulated in the lofty/pretentious motto: Kobe Fashion Town is a creative and sensuous town with basic themes of

INDUSTRY IN KOBE

Varied lifestyle of Fashion Town

beauty, love and dream." Having recog-nised that planned sensuality and dreaminess is more difficult than adding cement to a blueprint, the com-panies are now attempting to embrace

Mr Yujiro Tanaka, secretary of the Fashion Town Association, says that 32 of the planned 38 corporate buildings are finished, with the first opened in 1981. Accommodation for 20,000 residents — in buildings less interesting than the corporate headquarters - has been completed, as have conference facilities intended to make the island a symposium centre.

Mr Tanaka says the association's aim now most of the construction work is done, is to concentrate on the "spiritual development" of the area. "We want there to be more colour and smell."

The association also wants almost to double the size of the 436-hectare island. while construction work is continuing on nearby Rokko Island, which has another 580 hectares and will be partly devoted to fashion retailers, as well as a providing extra container-ship and tramper berths and a ferry base.

Mr Tanaka says that, unlike in most

Japanese cities, the emphasis in Fashion Town is on preserving space for spontaneous public use. The ground floor of each commercial building is supposed to be an "open space" for the public to walk through, browse in, and generally feel a part of.

Few Japanese have chosen to accept

this informal invitation to wander at leisure, as most are accustomed to more formal introductions and are uncomfortable with such an abstract welcome. While access to sports facilities is a problem in most parts of Japan, even the sports equipment and space provided by some companies for public use

Mr Shoji Kitami, managing director of corporate relations at Asics, a cloth-

A carp competition, rather like a dog show, was held in Fashion Town

ing and sporting goods company, says that the city is "unique" and "modern," but "we have been holding meetings to discuss how to make it more lively, otherwise young people may not want to come here." Neon signs have been suggested as a means of brightening buildings, he says, but "they are prohib-ited on this island."

On a recent Saturday afternoon, a vast plaza in the centre of Pashion Town was the site of a carp competition, with small, blue swimming pools erected from one end to the other, and local people invited to bring their carp along for judging. At peak bour in

the middle of a sunny afternoon, the contest had drawn few spectators, a take-away food stall was quiet and the intangible "atmosphere" was missing.

The fashion business is livelier. Asics, Japan's largest maker of sports shoes, has just signed an agreement with L A Gear to market and distribute the US company's products in Japan. Mr Kitami explains that, though his company has been highly regarded for its technical achievements in sports clothing, it has failed to keep pace with changing fashions.

Mr Masaaki Imakita, information director of World Co, says his company has managed to keep its production quality higher than foreign competitors in a Japanese consumer market that demands quality. "There are two sides to quality, the technical side and the fabric side. The challenge is to maintain the quality of your technique while

maintaining a sensitivity for fashion."
He says that the company has managed to "stay ahead of the newly-indus-trialised economies in quality," and while European producers offer competition in quality and image, they are a lesser worry than other large Japanese apparel makers. Companies in Fashion Town have had problems in the past three years with erratic supplies of raw materials from China, whose cotton, silk and cashmere export companies have flooded and then starved world

arkets. "The Chinese market is very volatile. Prices have increased sharply, and we have to be careful. In the Japanese apparel market, prices have probably

'The challenge is to maintain the quality of your technique while maintaining a sensitivity for fashion'

reached their upper limit. We produce a Y100,000 sweater but it does not sell very well," Mr Imakita admits.

Broadening the definition of "fash-ion" to include non-apparel companies has allowed Kobe to cultivate wider development ambitions. The word now roughly means "lifestyle," and virtually any industry with a renuous connection to the concept is encouraged to do busi-ness in Kobe, though new buildings cannot be constructed on the island.

Mr Kanemitsu concedes that other cities are trying to build images as fashion centres, including the not-too-distant Nagoya, which held a design exhibition last year and is trying to overhaul a reputation as a sturdy if dull industrial centre. Part of the urgency in image changes is a labour shortage and the bright lights of Tokyo, which lure

away young talent.
"Sometimes image means a lot. Many people had thought of Kobe as a cosmo-politan city, and we decided to base our plans for the city on that. It is a very strong sales point for Kobe," he says.

Robert Thomson

JAPAN'S PHARMACEUTICAL INDUSTRY

The drugs heartland

be the home of developments as diverse as the foam-filled fire extinguisher and the Pot Noodle. But it has also nurtured some of Japan's core industries - consumer electronics, paint and, in particular, pharmaceuticals.

While the world pharmaceutical industry serves a truly global marketplace, many of Japan's major manufacturers are not only concentrated in one city, Osaka, but one street, Dosho-machi Street, in the city's commercial heart.

As a result employees at Fujisawa, Shionogi, Takeda Chemical Industries and Tanabe Seiyaku could, if they wished, watch each other's comings and goings simply by peering down and out of their office windows.

The reason for this concentration, it is said, is the autocratic rulings of the Tokugawa shogun Hideyoshi Toyotomi in the 16th century.

He divided up the city into commercial enclaves, with dif-ferent sectors for such trades as textiles, manufacturing and Chinese medicines. These distributors of herbs and rhino horn were the predecessors of today's pharmaceutical indus-

in the early days of orthodox medicines Japanese companies relied on importing Western products rather than making their own. Shionogi, for example, began by importing gela-tine capsules from Eli Lilly of the US in 1909.

Even today, Japanese pharmaceutical companies import between 7 and 8 per cent of the drugs used in Japan, while exporting only 3 to 4 per cent, according to figures from the Japan Pharmaceutical Manufacturers' Association. The highest export rate is claimed by Tanabe Seiyaku, which sells 16.8 per cent of its wares overseas. Shionogi, on the other hand, one of the big three producers, exports less than 1 per

The established Japanese pharmaceuticals industry is now coming under increasing pressure to export its wares to balance the increased competition from overseas manufacturers on its home ground. Gov-ernment legislation to hold down prices and so cut company margins, combined with posing extra pressures.

The Japanese market is a

particularly attractive one to European and American pharmaceuticals suppliers, many of which have already established sales outlets in Japan. It is the world's second largest market after the US, accounting for 14.4 per cent of the total world market of \$100bn (£63bn) in

In the past the type of drug most in demand was antibiotics, but that is changing. In Japan, even more so than other industrialised countries, there is a rapidly growing number of older people. The latest data shows that 11.9 per cent of the total population is over 65 years old. As a result, demand is increasing for drugs to combat high blood pressure and heart disease, as well as mental disorders such as senile

Overseas companies planning to compete with their Japanese brethren will find themselves faced with the same government restrictions as their oriental colleagues. In particular, they will be subject to the incredibly complex series of price restrictions imposed by the Japanese

Health Ministry.
From this month the ministry has decided to cut the official price of ethical drugs (those drugs which are pre-scribed, not sold over the counter) by an average of 9.2 per cent. Some medicines will ace even larger cuts.

The rate has been decided on the basis of the discount rate that pharmaceutical distributors give to hospitals, clinics and doctors when they sell them the drugs. Because the doctors charge the insurance companies the official fixed rate for any drug they prescribe, they can pocket the difference between that official rate and the discounted rate they have paid.

Although it is the distribu-tors that carry out the dis-counting, it is the pharmaceutical manufacturers that will bear the brunt of the price cuts, and they are worried that their profits will suffer as a result

Mr Toshiaki Shigeuchi, associate manager of the planning department at Tanabe Seiyaku. points out that the price cut-

KANSAI, the commercial the changing demands in the ting will badly affect the heartland of Japan, claims to Japanese drug marketplace, is research and development budresearch and development bud-

get as well. "To obtain a new compound we need to spend Y10bn (£42m) over 10 years," he says. "We need to increase R and D spending every year, and this year we think it will be Y1bn nigher than previously. But to bear the price cuts and increase R and D spending we will have to try and cut indirect costs."

One solution that the pharmaceutical companies will be looking at is the introduction of new drugs which are derivatives of their existing product lines. Because the new drugs can be introduced at a high fixed price, the manufacturers will be able to maintain their profit margins.

Although companies such as Tanabe are conscious that they cover their high research and development costs, they are still focusing most of their efforts on the home market. "The Japanese market is very important, because it is so large," says Mr Shigeuchi. "So we are concentrating our efforts here."

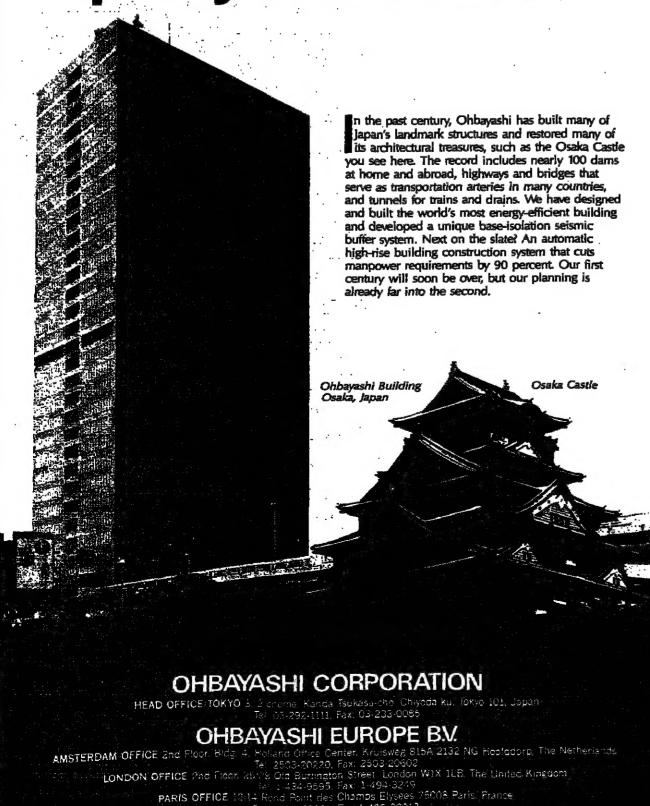

One of the few companies to have developed a product spe-cifically for the international market is Fujisawa. It has developed an immuno-suppres-sive drug, FK-506, which helps prevent patients who have had organ transplants from rejecting the foreign tissue. The company believes the drug could also be used in the treatment of AIDS.

FK-506 has been greeted with particular interest in the US. where clinical studies will begin this autumn. But in Japan, where transplant operations are very rarely performed because of religious and cultural barriers, there is no immediate market for the

Fujisawa is pinning its hopes on the drug's international potential because once a patient has received an organ, he or she now has to take immuno-suppressors for the rest of his or her life in order to prevent rejection. In 1988, 27,500 organ transplants took place worldwide, according to Fujisawa, and the figure, they point out cheerfully, is growing

A century of tradition in quality construction.

Happiness:

Perhaps the most important result of letting NYK's integrated logistics services do the work.

When you need truck, plane, train and ship in the right combination for global service, you have a choice. Either you spend your valuable time coordinating a dozen firms. Or you relax—and leave all the work and worry to NYK. NYK does it right. Our comprehensive computer simulation program, for example, will evaluate all factors in different transport mode combinations. On every level, at every step, NYK offers superior time-and-money-saving services.

Only one call takes care of your cargo between any two points on the globe. A call to happiness.

IT IS an unusual experience to

be in the middle of Kansai and

loving duet at the end of the

But perhaps the most unusual aspect of the drama is that all the characters are

played by women. And after a half-hour break, the same

actresses reappear in glitzy showbiz costumes, with

sequinned top hats and ostrich

feather tails. They perform

high-kicking routines remin-iscent of black-and-white Holly-

wood movies of the 1930s and sing tunes smacking of the

music hall.

The women in question are the Takarazuka Revue Company, a group of more than 350 highly-trained

musicians and actresses who perform classical Japanese

drama, Western musicals and

song and dance. The revue is a

gorgeous spectacle of costume and scenery - the costumes

and scenery — the costumes for just one revue section can cost Y100m (nearly £500,000). Behind all the glamour, the Takarazuka regime has an image of tough discipline and hard work. But despite this, and the growing dissatisfaction of Japanese women with their

of Japanese women with their

subservient social role, the

Takarazuka actresses are still

the idols of many a Japanese

adolescent. Indeed, the 2,800-seat Grand Theatre at

Takarazuka, the spa town after

which the group was named, is packed full for every afternoon performance, mainly with

teenage girls.
Although it accepts only 40

new recruits every year, the company has had over 700 girls apply for this April's entrance examination, says Mr Masao

Hashimoto, former producer

with the Takarazuka Revue Company. He believes the high

number of applications from 15 to 18 year olds is because of the quality of the training given by

the company, and also because it confers a certain social

Movie star salaries, he says,

are no reason for joining the group. In fact, for many of the girls subsidies from their

wealthy families are needed in

While Takarazuka no longer insists on all the girls living in

company dormitories, or for-

bidding them to see men, as

used to be the case, the

entrance examination is enough to make any feminist

order to make ends meet.

status on the girls.

'revue". a mixture of Western

performance.

A ketchup commotion

business in house with Kansai times blunt, sometimes musi-cal variation of Japanese that pleased that since April last 'outsiders" from Tokyo have

difficulty in understanding. Kansai people are proud of their idiosyncrasies, although the historical differences encouraged by isolation have been smoothed out by modern communications. A shinkan-sen, the "bullet train," does the Tokyo-Osaka run in three hours, and the national broadcaster, NHK, has standardised the Japanese language and

popularised Kansai slang.
Differences remain. When Kagome, the country's market leader in ketchup, replaced its standard soft plastic container with a hard plastic bottle just over a year ago, the outcry from Osaka forced the reintroduction of the old-style soft

version. Mr Hidenori Nishi. Kagome's corporate planning manager and an Osakan, explains that Kansai people cannot bear to waste fond, and used to cut open the plastic containers to scoop out the last drips of ketchup. But, he adds ruefully, they have found the new hard

plastic difficult to penetrate.
"I was born in Osaka, and maybe you can say that people from my home town are mon-ey-conscious. Osaka people believe that to dispose of food without having used it all is wrong. We are not able to from my home town are mon-

Kagome's experience fits in with the Tokyo image of Kansai people. On hearing the Kansai dialect, a Tokyo officer worker says, "I think of money and small shops and merchants." But Japanese are generally agreed that people in Nagoya, the industrial centre between Tokyo and Osaka, are

the most thrifty. Mr Kenichi Ohmae, chairman of McKinsey in Japan, auggests that Tokyo's economic surge has been partly fuelled by a consumer spending boom which Kansai could not match because its residents

are less reckless with money. "People in Kansai are very pragmatic. In Tokyo, people may spend Y200,000 for a suit, but Osaka people can't see much point in spending more than Y40,000. They have remained very pragmatic con-

the economy is behind Tokyo, compatriots, they use an where the waste spending is earthy regional dialect, a some-enormous," Mr Ohmae says.

year, the increase in retail store sales in Osaka has exceeded that in Tokyo. In the recent past, the Tokyo increase has been 2 to 3 per cent higher. and so there is a sense among people such as Mr Kazuaki Harada, managing director of Sanwa Bank, that Kansai could be on the crest of a uncharacteristic wave of consumption.

"Traditionally, Osaka people spend more money on food than on clothes. Tokyo people don't hold on to money for very long, they like to spend it quickly," Mr Harada says.

Companies in the Kansai have a reputation of restricting borrowings to needed capital expansion, and the region has a higher share of national bank deposits, 30.6 per cent, than either its share of GNP, 20 per cent, or its share of manufactured goods transported, 18.9

Regional banks have an maintaining the sense of local support for local industry, even though the larger Osaka-based banks, such as Sanwa, Daiwa and Sumitomo, are classified national and international

The Kobe-based Taiyo Kobe Bank, the eighth-ranked in Japan, has just merged with the Tokyo-based Mitsui Bank, the seventh-ranked, to form the Mitsui Taiyo Kobe Bank, which, in the Japanese language, is known as the Taiyo Kobe Mitsui Bank for the sake of egos at the Kobe bank.

Regionally-based city banks have strategic holdings in the region's bigger companies. For, example Sumitomo Bank has 4.4 per cent of Matsushita Elec-tric Industrial, Sumitomo Life Insurance has 4.2 per cent and Sumitomo Trust has 2.9 per cent, even though NEC, a Matsushita rival, is a member of the Sumitomo family of companies or *keinetsu*.

Sanyo Electric, also has a Sumitomo connection. Sumitomo Life Insurance has a 5.1 per cent share holding, Sumitomo Bank has 3.7 per cent and Sumitomo Trust has 3.1 per cent. The holdings work both ways. The Kyoto-based

to see a 1%-hour musical version of "Great Expectations" performed in Japanese. Charles Dickens purists may be even more disoriented to witness the hero and heroine. Pip and Estelle, united in a maker, has 3.4 per cent stake in the Bank of Kyoto, and the Bank of Kyoto has a 4.5 per

cent stake in Kyocera. Kansai companies also have reputation for putting more emphasis on profits than on market share, although the latter has become a trademark of Japanese companies' activities in foreign markets. And companies in Kansai are said to put more emphasis on personal contact with customers, both at the retail and wholesale

The sometimes awkward relationship between the cencompanies and the need to be close to decisions affecting industry have prompted com-panies to shift their headquarters to Tokyo.

Executives and officials in Kansai complain that the bureaucracy in Tokyo can be unsympathetic to the aspirations of the region, while the bureaucrats suggest that Kan-sai companies have a record of ignoring "administrative guidance." For example, in the early 1970s, textile companies in the region, annoyed at Tokyo's lack of consultation, did not observe a voluntary quota on exports to the US.

The influential university

old-boy networks in Tokyo have a tendency to overlook the Kansai, as even students from the region develop a Tokyo orientation on entering university, and, after graduatold-boy relationships than on the Kansai connection. But Mr Harada, at Sanwa,

says that Osaka people have a great pride of place. "Tokyo people are not necessarily from Tokyo. They have come from various parts of the country. Osaka people have been here for a long time."

Still, seeing a play in Tokyo has a certain snob value among Osaka people, Mr Kenichi Ohmae says, basically because people in the region have developed a sense of infe-riority as "Tokyo has got bigger and bigger.

"Kansai people want what Tokyo has. Everything is becoming the same. Nothing is unique. Kansal should think of itself as a country," Mr Ohmae avers.

Robert Thomson

The "enthralling concept" of the Takarazuka troupe

Appeal of an all-girl show

Geishes in Kyoto promoting a new department store

fume. The girls have tests in singing, dancing and a face-to-face interview to see if they are pretty and have a good figure. The most important qualification is that they are unmar-ried, reports Mr Hashimoto.

Perhaps because of that, the main reason the girls leave the company is to marry, although some of the main stars have moved on to become TV or film stars in Japan. (One is now appearing in London in the musical Miss Saigon.) One of the taboo subjects at

the school is the ages of the performers. The girls join the troupe after training when they are between 17 and 20, to start at the bottom of the stardom ladder. By the time they get to the top they are probably in their late 20s or

Once the girls are accepted for the Takarazuka Music School, they have two years' intensive training to look forward to before they are allowed to perform with one of

the four theatre groups there are the flower, moon, snow and star troupes. The training includes singing, dancing and classical and modern ballet lessons, as well as training in playing the shamisen and koto, two traditional Japanese musical instruments.

But the hard work does not stop once they graduate. Even then they have regular examinations to ensure

standards are maintained. Mr Hashimoto reports there are few problems in persuading half of the intake to play male roles. In fact, he says many girls apply to join the Takar-azuka in order to do just that, while others are happy to act with women kitted out as men.

The decision to have an all-female troupe was an unusual one, particularly in Japan where all the classical Japanese theatre groups, such as Kabuki, are all male, with men playing female roles. However, the idea was essentially a 20th century commercial decision rather than a traditionally rooted cultural

The Takarazuka was founded in 1914 by Mr Ichizo Kobayashi, founder of the

Hankyu Corporation. The company had built a railway line out from Osaka to Takarazuka, a spa resort noted for its springs. But the spa town proved not to be a sufficient attraction for the crowds of people Mr Kobayashi wanted to use the line. So be determined to build a funfair and zoo in Takarazuka, and

might do the trick.

In Tokyo at that time the Mitsubishi group had a boys' chorus group in operation, so for the sake of ringing the changes Mr Kobayashi formed

then decided a chorus group

Things blossomed from there, with the group, still owned by Hankyu, gaining an international reputation. In 1938 it went abroad for the first

time, and in 1939 performed in Hollywood. Next year one of the four groups is hoping to perform in London.

The decision to continue to

har men from the troupe, says Mr Hashimoto, is because the audience continues to be enthralled by concept of an all female team. Every time attempts have been made to break with the tradition, public outcry has caused the company to revert to the initial policy. But the Japanese girl's

search for the sweet and cute has now come up with a new source of amusement in Takarazuka. Recently the popularity of the theatre group has been eclipsed by a much rarer occurrence at the spa town. In the zoo the birth of twin cubs to a snow leopard has given the young women of Kansai something even more attractive to absorb their attention.
